## PREFACE

This annual hospital statistics report is the outcome of the collaborative efforts of Department of Health, data provider for health service delivery, and Department of Health Planning, responsible department for data compiling, coding, analysis and interpretation. We appreciate the cooperation and efforts of all public hospitals, without which this report cannot come into existence. This report includes hospital information from all public hospitals under Ministry of Health and some from other ministries.

In spite of assiduous efforts for timely publication, annual hospital statistic report (2012) can only come out in November 2014. Previously there was limitation of capacity for disease coding at all levels of hospitals as two-week training courses on ICD-10 and CAMRS (International Statistical Classification of Diseases and Health Related Problems -10<sup>th</sup> Revision and Computer assisted Medical Record System) could have been given to medical record technicians. As an effort for better hospital information, the very first three-month training course on ICD-10 and CAMRS was provided in 2012 to medical record technicians from 30 hospitals with the strength of 150 Beds and above. Medical doctors from 75 hospitals were also trained on ICD-10 and CAMRS in 2013. Hopefully these efforts contribute to timely publication of annual hospital statistics report in the coming years.

This report is based on monthly returns of the public hospitals from 1<sup>st</sup> January to 31<sup>st</sup> December 2012 and is tried to provide information for effective management and planning of hospital services at all levels of health care administration with a variety of presentations. Response rates changing over time, availability and utilization of hospital resources, assessment on efficiency of the hospitals were described to facilitate decision makers in managing and administrating hospital performance effectively. So far Hospital data constitute the primary and basic source of disease problems in the community. In this reports, the morbidity and mortality pattern were presented as the leading causes among all cases of hospitalization and also as proportion among the specific disease groups.

Both hospital administrative indicators and morbidity and mortality statistics were disaggregated by geographical area allowing the comparison of hospital services within the country. Some indicators were presented in trends to indicate rise and fall of hospital performance during the last decade.

As the saying goes "Information is power and Information system is the central nervous system of any institution or organization", Department of Health Planning tried to reflect needs and situation of hospital services in this report which is hoped to be useful for various levels of health services and health professionals.

## INTRODUCTION

Health Information Division, Department of Health planning, takes the responsibility for the collection, processing, analyzing and interpretation of hospital data of Myanmar. Since 1963, Annual Hospital Statistics Reports has been published and distributed to the concerned departments and the public hospitals to be used for planning and managing hospital performance. From 2008 onwards, it can be available online at [www.moh.gov.mm](http://www.moh.gov.mm).

All the public hospitals in Myanmar are reporting their inpatient data which are specified in revised Hospital Form Manual released in August 2012 by using the following standardized Hospital Report forms:

- Form I -Monthly Hospital Return (Administrative)
- Form II-Monthly General Inpatient Summary
- Form III-Hospital Daily Record (In-patient).

Part C of Form I -Monthly Hospital Return (Administrative) is used to report outpatient activities of the hospitals. Outpatient summary are reported with outpatient report form of which data items are specified in Outpatient Report Manual released in May 2008.

In 2012, there are 945 public hospitals; some of which are not under the administration of Ministry of Health. This report organizes hospital statistics from routine service reporting system of all public hospitals, including from Station Hospitals to tertiary Hospitals, and contains information on

- Reporting status of the public hospitals
- Availability and utilization of hospital services
- Availability and utilization of hospital resources
- Hospital performance indicators
- Patient care services such as
  - Outpatient services
  - Surgical services
  - Obstetric services
- Hospital death rate
- Graphical presentation of morbidity and mortality statistics and
- Tabular presentation of hospital statistics.

The statistics in some presentation of this report are organized by States and Regions of the hospitals, not by the States and Regions of usual residence of the patients.

Although some of the large hospitals reported their data electronically, the reporting system is still paper-based. Therefore, timeliness and response rate of the hospitals are varied across the States and Regions. In addition, the response rate is affected by some hospitals which are not under the administration of Ministry of Health. The response rate in 2012 was described in this report in terms of changes over time and variation across Regions and States.

All administrative data are compiled from Hospital Form I and III reported monthly by the public hospitals of all States and Regions. Eight hospital administrative indicators were used

to evaluate the performance and utilization of the public hospitals. This report also described distribution and trends of availability of hospital resources among different Regions and States to provide current situation of hospital services.

Morbidity and mortality statistics of all inpatients were processed from Hospital Form II by applying single condition morbidity analysis in accordance with Guidelines and Rules for morbidity and mortality coding. Therefore there may be loss of some information relating to the occurrence of the disease problems.

Morbidity and mortality statistics are not based on the actual number of patients, but on the frequency of hospitalization. Therefore some cases may be multiplied due to readmission and may be more than actual occurrence of disease problems. In graphical presentation, morbidity and mortality pattern of all inpatients and leading causes of hospitalization or morbidity and that of mortality are illustrated. Percent distribution and proportion of leading causes among the specific disease group are also presented to highlight the burden of specific diseases among the hospitalized patients and provide information for effective management and planning.

Another area newly introduced in this 2012 report was assessment on efficiency of the public hospitals under Ministry of Health by the Pabón Lasso technique. Previously, percentage of bed occupancy based on sanctioned bed was used as indicator for assessing hospital utilization. However, unnecessarily prolonged stay, development of nosocomial complication, improper patient care and lack of facility for proper patient care may lead to prolong length of stay with relatively high bed occupancy. To avoid such misleading information from any particular indicator, three indicators; bed occupancy rate, bed turnover ratio or average turnover of patients per bed per year and average length of Stay, were used simultaneously according to Pabón Lasso Technique. In this report, it was applied to all public hospitals under MOH as well as to each type of hospitals by using specific indicators accordingly.

In addition, the hospitals which had at least conventionally set norm for bed occupancy rate (80%) were extracted from the desirable zone (Quadrant III of the Pabón Lasso graph) and stated with tabular presentation to provide information for planning and management of hospital resources.

## **LIST OF ABBREVIATIONS**

A.O.D.H	=Anti Opium Drug Hospital
BOR	= Bed Occupancy Rate
CAMRS	= Computer Assisted Medical Record System
CVD	= Cardiovascular Disease

# **SECTION I**

## **HOSPITAL ADMINISTRATIVE STATISTICS**

## Response Rate of Hospitals

## PART A

This section presents response rate of the public hospitals including trends of the reporting status within the last 10 years from 2012 and describes the variation between different States and Regions.

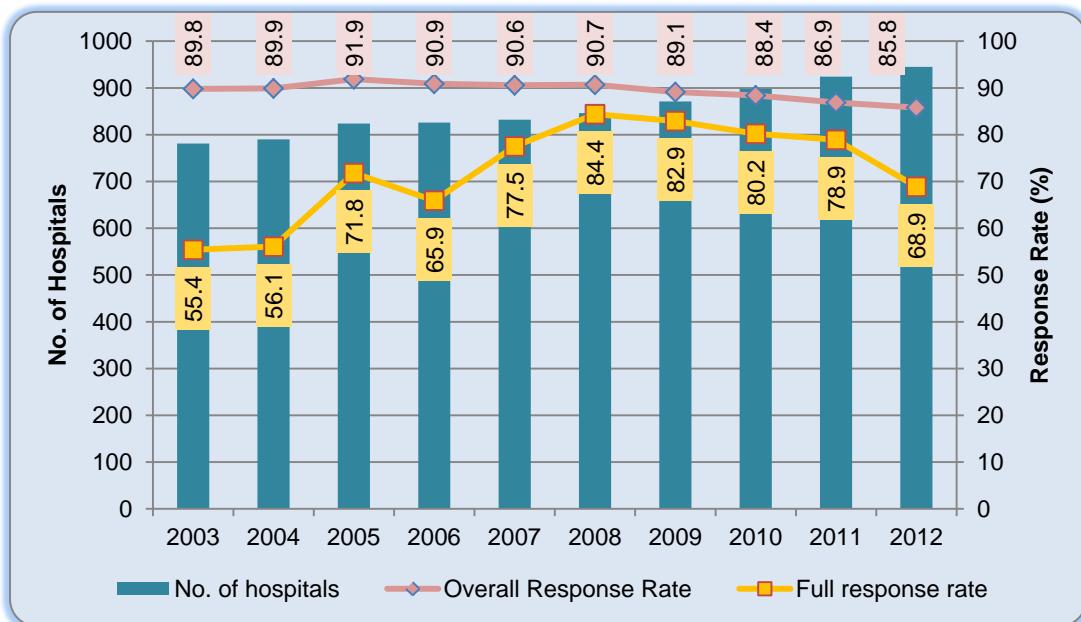

The reporting status of the public hospitals was described in Table (1). From year 2003 to 2012, numbers of hospitals were in increasing trend whereas the reporting status were gradually decreased. It was found that 68.9% of public hospitals sent reports monthly in 2012 and it was the lowest rate compared to response rates of last five years. Non-reporting hospitals accounted for 10.2% of hospitals. Overall union response rate in 2012 was 85.8%.

**Table (1) Reporting Status of Public Hospitals by the Number of Months Reported (2003-2012)**

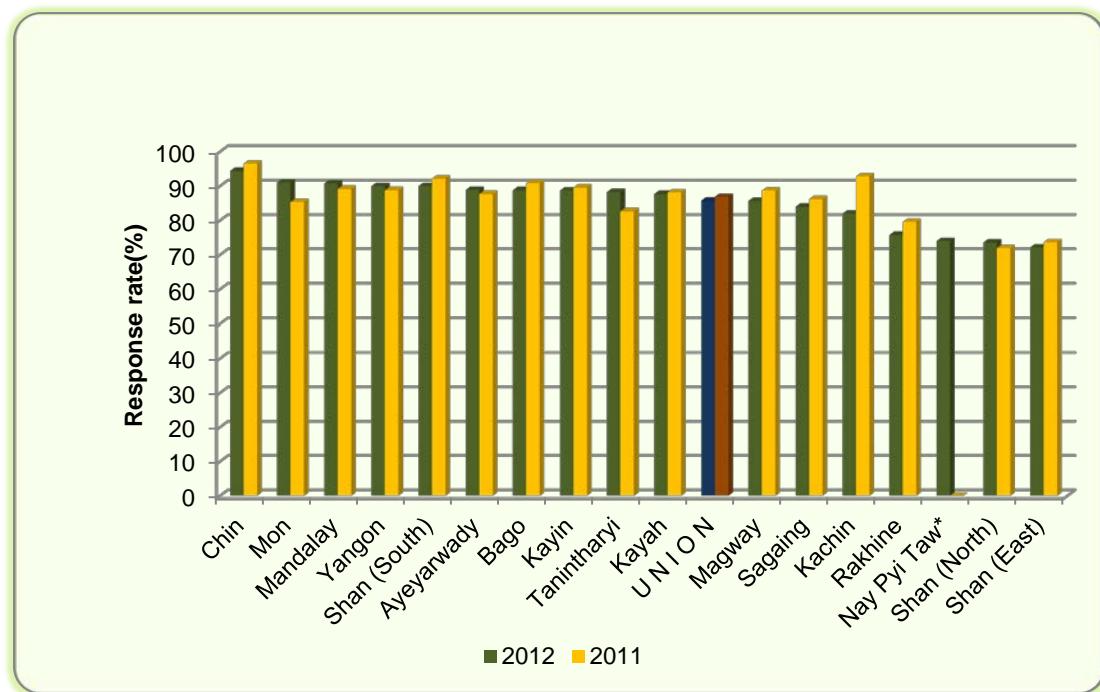

Year	Number of hospitals by months reported							Total hospitals	Union response rate (%)	
	12 Months		6-11 Months		1-5 Months		0-Month			
	No.	%	No.	%	No.	%	No.	%		
2003	433	55.4	271	34.7	18	2.3	59	7.6	781	89.8
2004	443	56.1	281	35.6	16	2.0	50	6.3	790	89.9
2005	592	71.8	156	18.9	8	1.0	68	8.3	824	91.9
2006	545	65.9	203	24.5	15	1.8	63	7.6	826	90.9
2007	645	77.5	128	15.4	11	1.3	48	5.8	832	90.6
2008	714	84.4	63	7.4	8	0.9	61	7.2	846	90.7
2009	722	82.9	62	7.1	8	0.9	79	9.1	871	89.1
2010	721	80.2	85	9.4	13	1.4	79	8.8	898	88.4
2011	729	78.9	85	9.2	15	1.6	95	10.3	924	86.9
2012	651	68.9	182	19.3	16	1.7	96	10.2	945	85.8

Overall reporting status from 2003 to 2012 was shown in figure (1) in comparison with full 12-months response rate against the increasing number of public hospitals. The overall response rate was found gradually decreased since 2005. In 2012, overall response rate and full response rate were the lowest within five years from 2008 to 2012.

**Figure (1) Response Rate of Public Hospitals for Union (2003- 2012)**

**Figure (2) Response Rate of Public Hospitals by Regions and States in 2011 and 2012**

Note: \*Nay Pyi Taw Union territory started reporting separately in 2012.

In figure (2), it was shown with graphical presentation to compare the response rate of 2012 with that of 2011 by Regions and States. The response rate was slightly increased in Mon, Tanintharyi, Mandalay, Shan (North), Yangon and Ayeyawady during 2012. However, most of the Regions and States had decreased response rate compared to 2011. The greatest fall was seen in Kachin State.

Response rates of public hospitals were described in detail in Table (2). Chin had the highest reporting status; 19 out of 24 hospitals had full response rate and 4 hospitals did not send reports for one month. The lowest reporting status was found in Shan (East), in which 6 hospitals were non-reporting. In Shan (North), 14 out of 63 hospitals (22.2%) had not sent any report.

**Table (2) Reporting Status of Public Hospitals by Regions and States (2012)**

Region/ State	No. of Hospitals	Number of hospitals by months reported												Nil Reporting	Newly established hospitals	Response rate (%)			
		1	2	3	4	5	6	7	8	9	10	11	12			2012	2011		
Chin	24												4	19	1		94.4	96.5	
Mon	33												2	7	22	1	1	91.1	85.4
Mandalay	91						2	1	4				12	67	2	3	1	90.8	89.2
Shan (South)	58		1							1	1	7	44	4				90.0	92.2

Shan (North)	63	1							2	3	8	35	14				73.6	72.0	
Shan (East)	27	1								3	2	15	6				72.2	73.7	
Nay Pyi Taw**	17							1			1	11	4				74.0	-	
UNION	945	2	4	5	3	2	5	4	8	16	30	119	651	76	20	7	85.8	86.9	

Note: response rate may be affected by the hospitals which are not under the administration of Ministry of Health such as some hospitals under other ministries and some from Shan (North).

\* Hospitals under the administration of other ministries

\*\*Nay Pyi Taw Union territory started reporting separately in 2012

$$\text{Overall response rate} = \frac{\sum_{i=1}^{12} n_i}{(\text{Total number of hospitals} \times 12 \text{ months})} \times 100$$

n= Number of reporting months × Number of hospitals

## Hospitals Services

## PART B

This chapter describes overview of hospital services including number and types of hospitals, availability of sanctioned and available beds and utilization of hospital services for inpatients and outpatients. It also presents the trends of hospital service indicators during the last decade and is tried to reflect rise and fall of hospital services.

**Table (3) Hospital Service Indicators for Union (2003-2012)**

Sr . N o.	Hospital Services Indicators	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012

**Figure (3) Trend of Hospital Resources for Union by Year (2003-2012)**

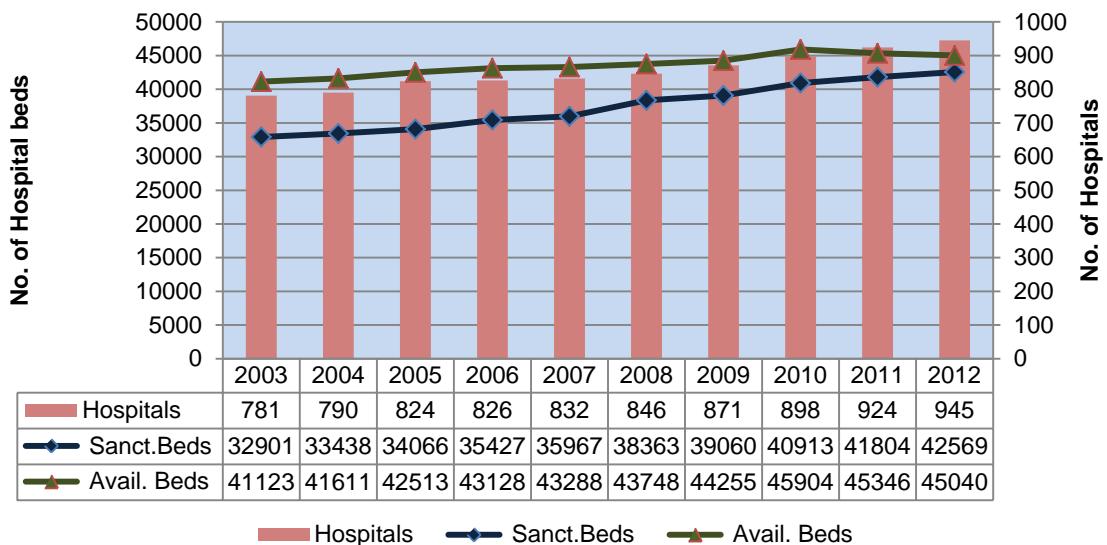

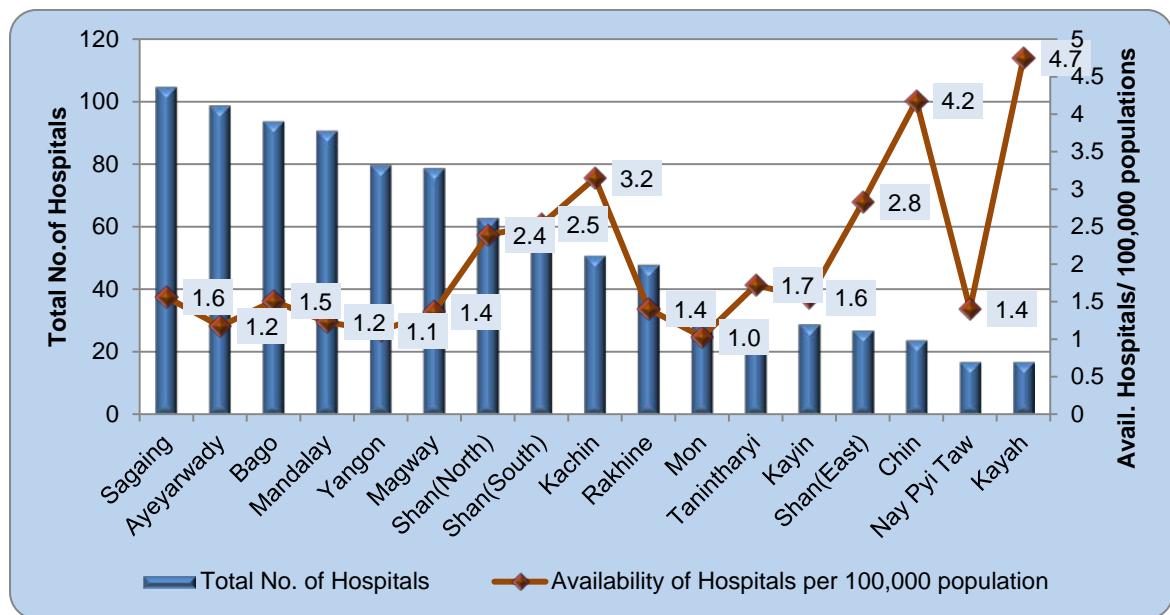

Figure (3) shows hospital resources for Union from 2003 to 2012. Number of hospitals was in increasing trend, 781 in 2003 and gradually increased to 945 in 2012. Number of sanctioned bed and available beds were also increasing and the differences between them for Union became lesser and lesser from 2003 to 2012.

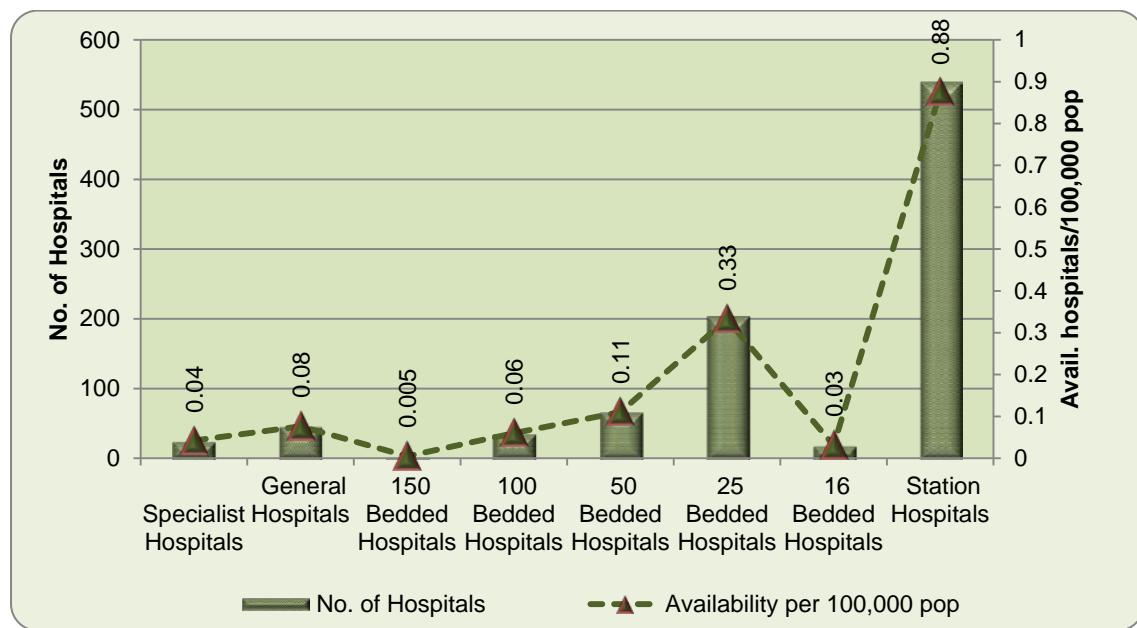

**Figure (4) Availability of Hospitals per 100,000 population by Regions and States (2012)**

Note: it was described by the hospitals of Regions and States by geographical area, but not on hospitals of usual residence of the patient

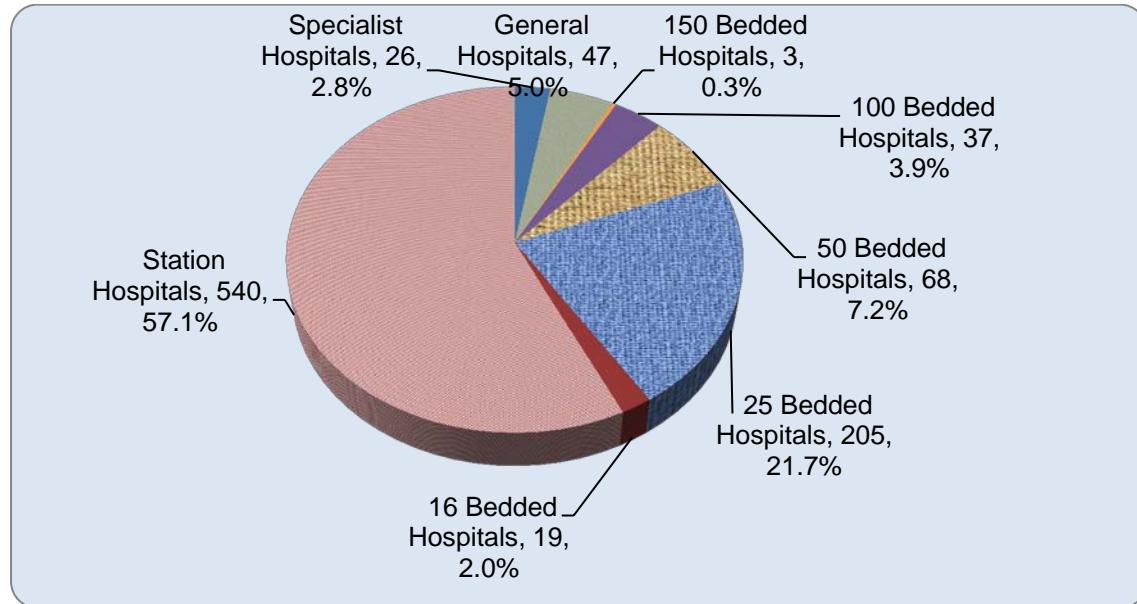

In 2012, total number of hospitals was 945. Their frequency distributions across the country were described in Figure (4). In Sagaing Region, there were more than 100 hospitals. It was found that Chin State, Kayah State and Nay Pyi Taw had around 20 hospitals. However, the availability of Hospitals per 100,000 populations was highest in Kayah and Chin followed by Kachin State.

**Figure (5) Availability of Hospitals per 100,000 populations by Type (2012)**

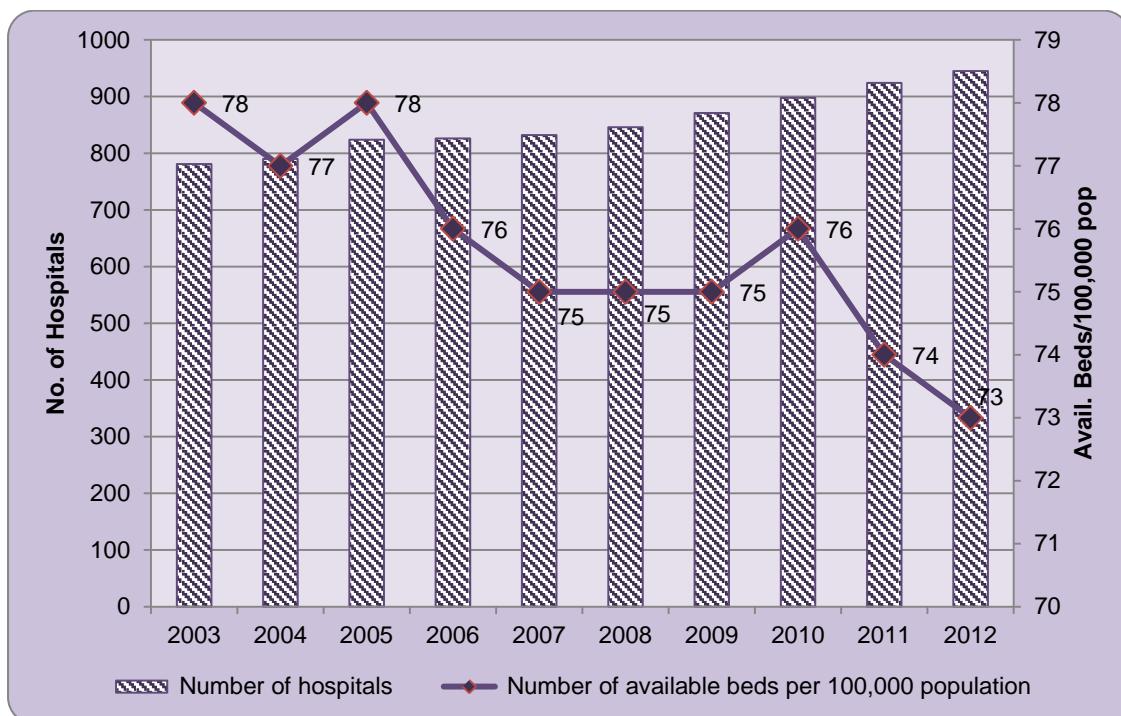

Station hospitals were more available (about 1 hospital per 100,000 populations) than any other type of hospitals. Specialist services were available at Specialists Hospitals (0.04 per 100,000 populations) and General hospitals with Specialist service (0.08 per 100,000 populations).

**Figure (6) Percent Distribution of Types of Hospitals (2012)**

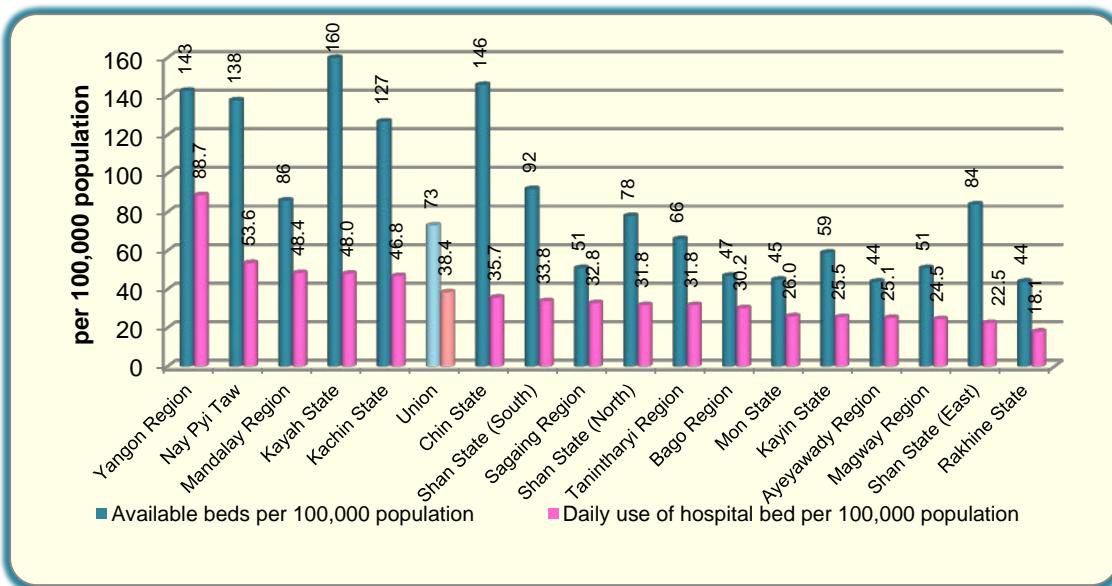

Among total hospitals in Myanmar, Specialist Hospitals and General Hospitals were accounted for 2.8% and 5% respectively (Figure .6). The largest proportion of hospitals were Station Hospitals (57.1%) followed by 25-Bedded Hospitals (21.7%).

**Figure (7) Availability of Hospital Beds per 100,000 populations (2012)**

As described in the above figure, the availability of hospital beds varied around 75 per 100,000 populations within the last 10 years. In 2012, it was found to account for 73 per 100,000 populations.

**Figure (8) Availability and Daily use of Hospital Beds per 100,000 population by Regions and States (2012)**

In figure (8), daily use of hospital beds per 100,000 population in every Region and State was described in comparison with availability of hospital beds for that population. Daily use of hospital beds was found the highest in Yangon Region (88.7 beds per 100,000 population) followed by Nay Pyi Taw and Mandalay.

**Table (4) Availability and Utilization of hospital resources by Regions and States (2012)**

Sr. No.	Regions & States	Total number of hospitals	Sanctioned beds	Available beds	Available beds per 100,000 population	Daily use of hospital bed per 100,000 population [*]	Admissions	Admission per 1000 population	Discharges & Deaths	Discharges & Deaths per 1000 population	Patient days	Patients days per 1000 population	Number of deaths	Hospital death rate

**Figure (9) Bed Occupancy Rate (BOR) by Year (2003-2012)**

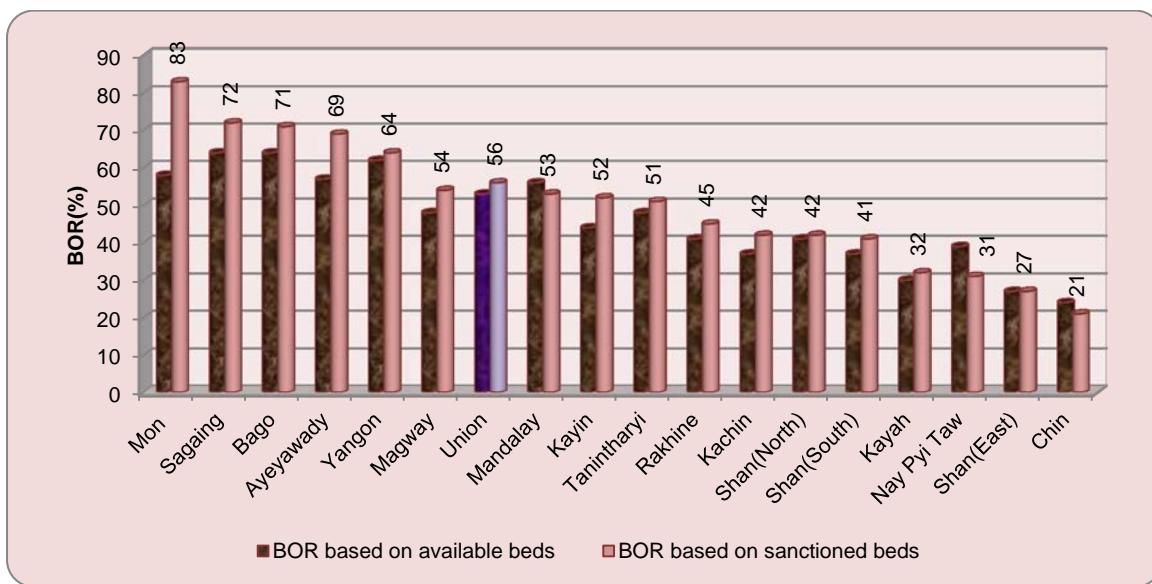

From year 2003 to 2012, utilization of public hospitals was shown in Figure (9) in terms of bed occupancy rate based on sanctioned beds and available beds. Bed occupancy rate based on available beds was in increasing trend. It was found that about half of sanctioned beds were occupied during these years ranging from 50% to 56%.

**Figure (10) Bed Occupancy Rate (BOR) by Type of Hospitals (2012)**

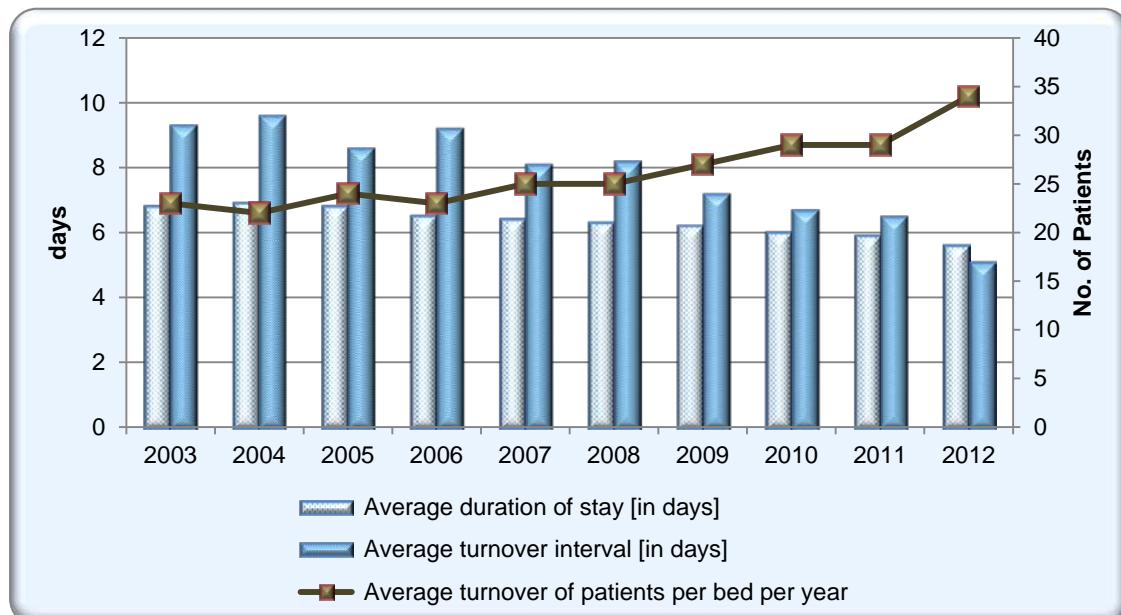

In this figure, bed occupancy rates (BOR) of different types of hospitals were illustrated by sorting the BOR based on sanctioned bed from the highest to lowest. General hospitals and 25-Bedded hospitals had the highest bed occupancy rate (69% and 66% respectively) and it was also above the Union figure.

**Figure (11) Bed Occupancy Rate (BOR) by Regions and States (2012)**

According to the Figure (11), 83% of the sanctioned beds of the public hospitals in Mon State were occupied in 2012, reflecting high utilization. It was followed by Sagaing and Bago Regions, representing 72% and 71% respectively. In Shan (East) and Chin, less than 30% of sanctioned beds were utilized during 2012. In comparison with bed occupancy rate based on sanctioned beds, those of available beds were also illustrated for all States and Regions. Exact figures were described in Table (4).

**Figure (12) Trend of Hospital Performance (2003-2012)**

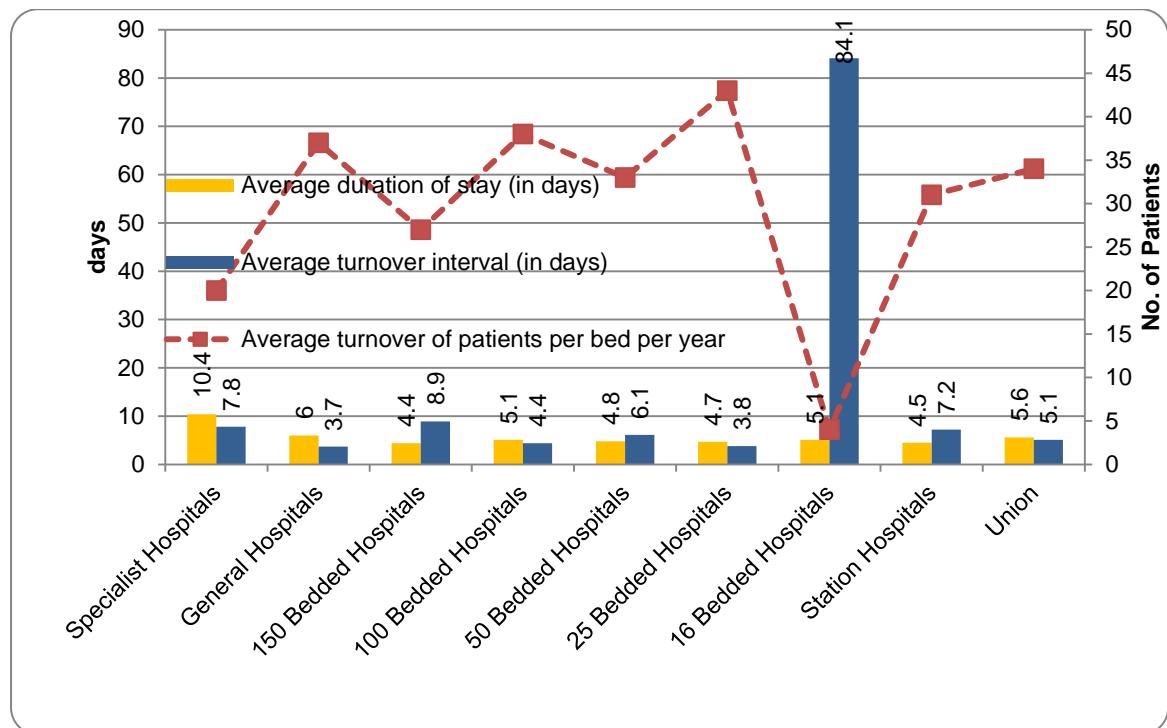

In Figure (12), hospital performance during 2003 to 2012 was shown with average duration of stay, average turnover interval and average turnover of patient per bed per year. Average duration of stay or length of stay was gradually decreased and it was 5.6 days in 2012. [Table(3)]. Average turnover intervals were also in decreasing trend from 2003 -2012. The patients admitted and discharged per bed per year were increasing and it was more

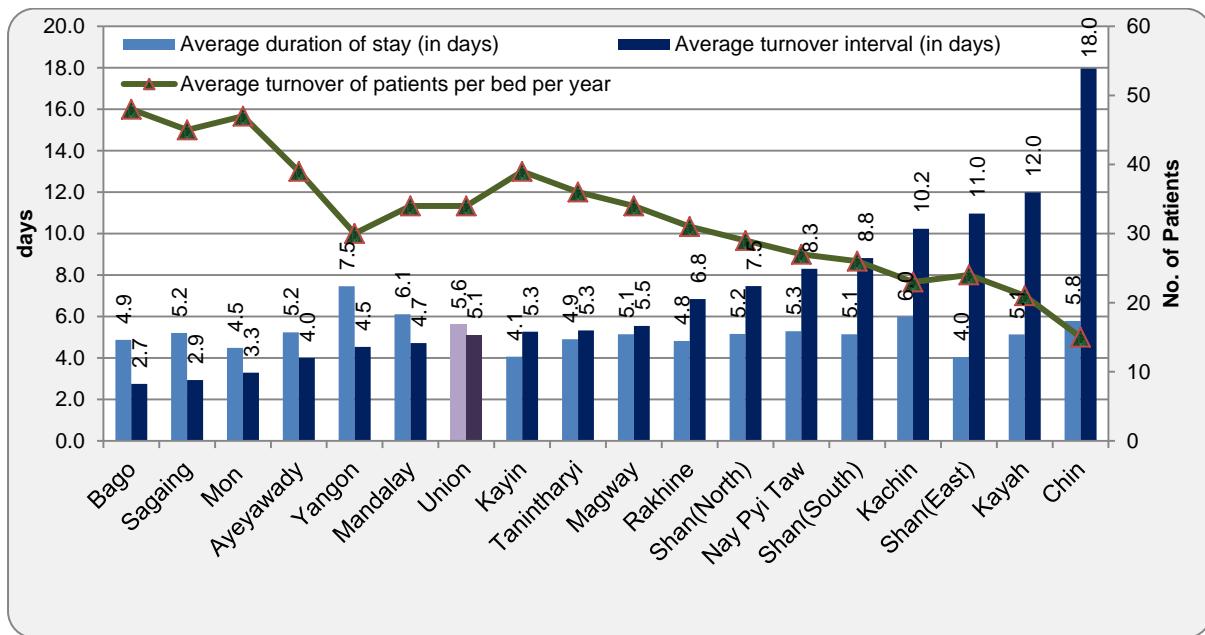

than 30 patients during 2012. According to these indicators, it was found that performance of public hospitals in 2012 was better than previous years.

Hospital performance of various types of Public Hospitals was illustrated in the following figure. Average turnover of patients per bed per year was high in General Hospital, 100-bedded hospital and 25-bedded hospitals. Average duration of stay was ranging from 4.4 days in 150-Bedded hospitals to 10.4 days in Specialists Hospitals. Average turnover interval was the shortest in General Hospitals (3.7 days). In 16-bedded hospitals, it was found that the lowest average number of patients (4 patients) were admitted and discharged per bed per year and average turnover interval was the highest (84.1days) in 2012.

**Figure (13) Hospital Performance by Types of Hospitals (2012)**

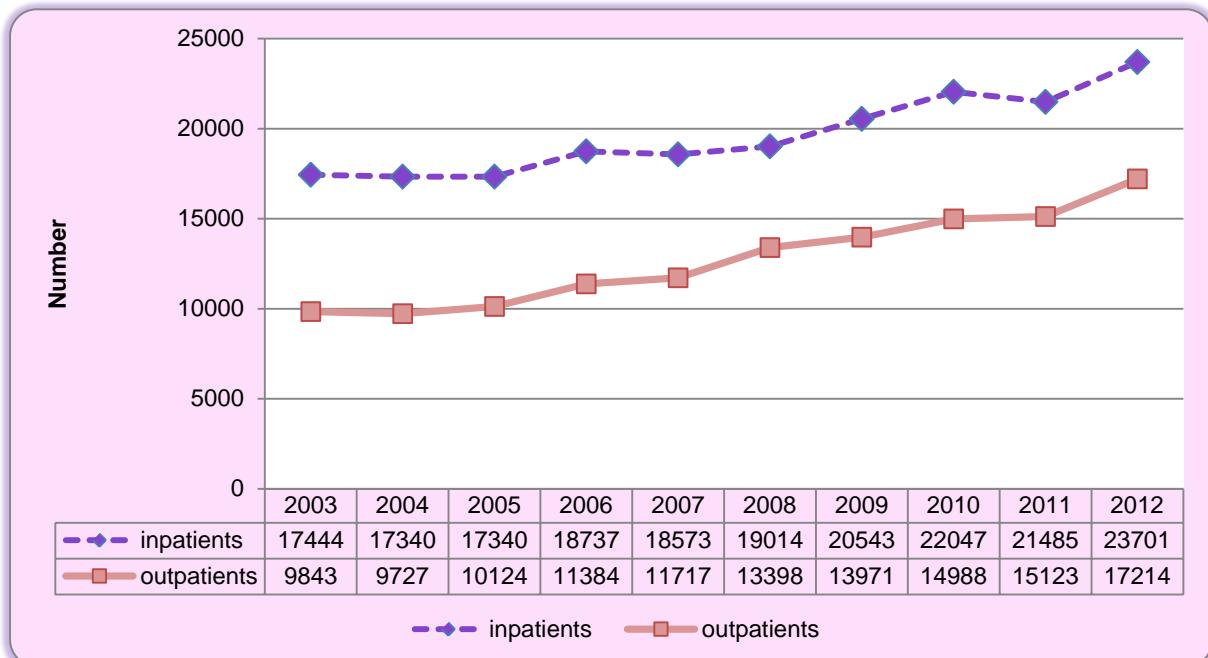

**Figure (14) Hospital Performance by Regions and States (2012)**

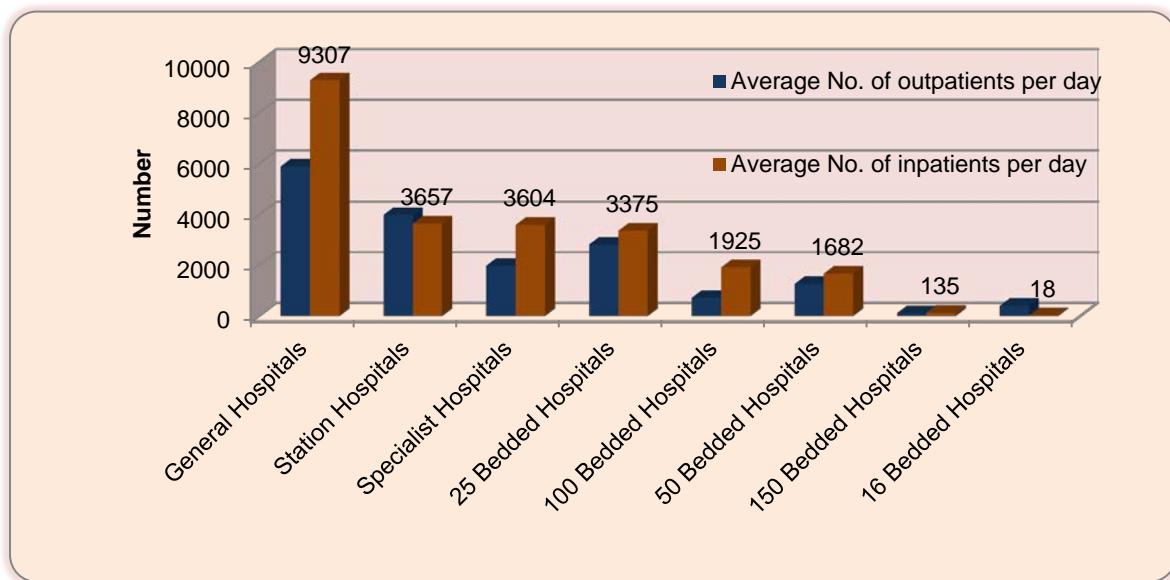

According to the three indicators illustrated in the above figure, Bago, Sagaing, Mon, Ayeyawady, Yangon and Mandalay were having shorter turnover interval than Union figure.

**Figure (15) Utilization of Public Hospitals (Average No. of Inpatients & Outpatients per Day) for Union (2003-2012)**

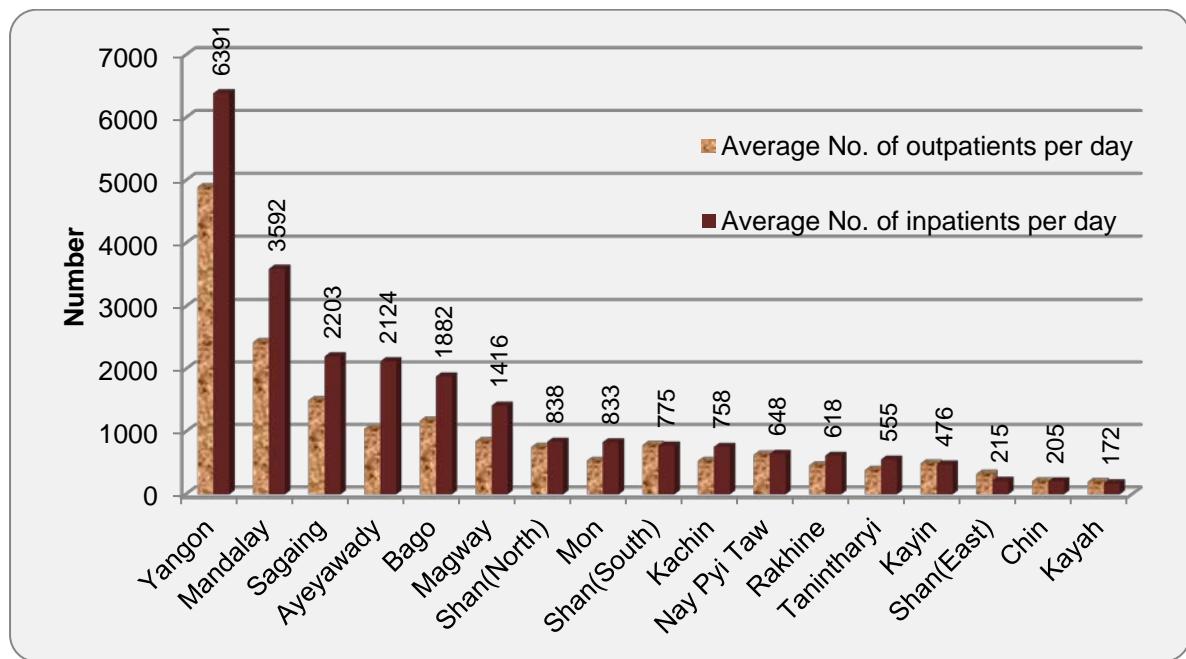

In Figure (15), the trend of utilization of public hospitals from 2003 to 2012 was stated with average number of inpatients per day and that of outpatients per day. Both were in increasing trend. For 2012, it was described by each type of hospitals (Figure.16) and by Regions or States (Figure.17).

**Figure (16) Utilization of Public Hospitals by Type of Hospitals (2012)**

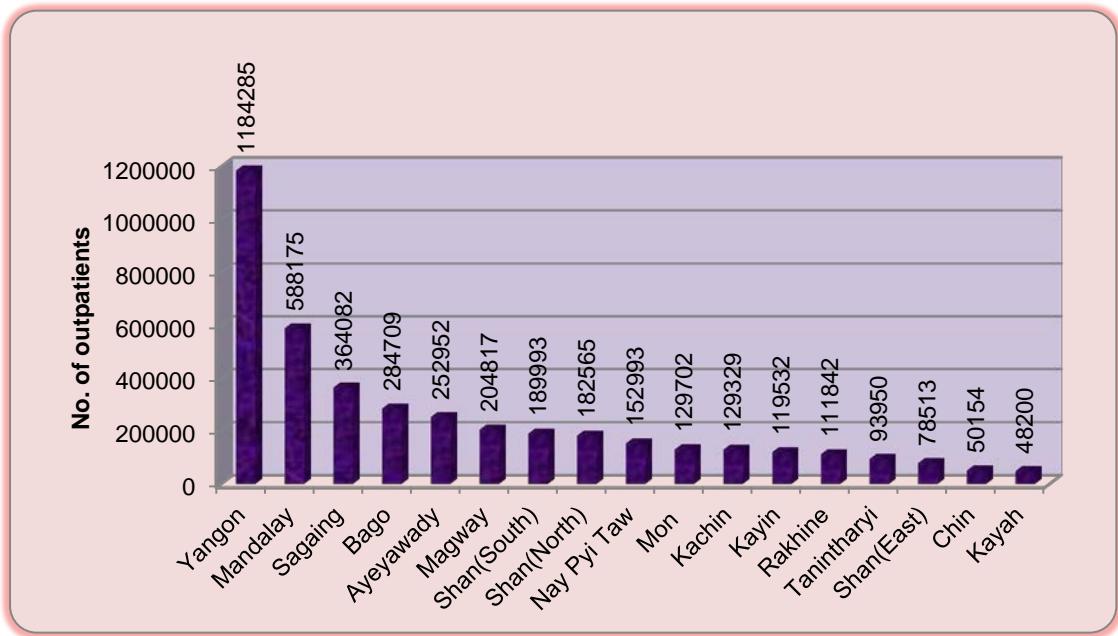

**Figure (17) Utilization of Public Hospitals by Regions and States (2012)**

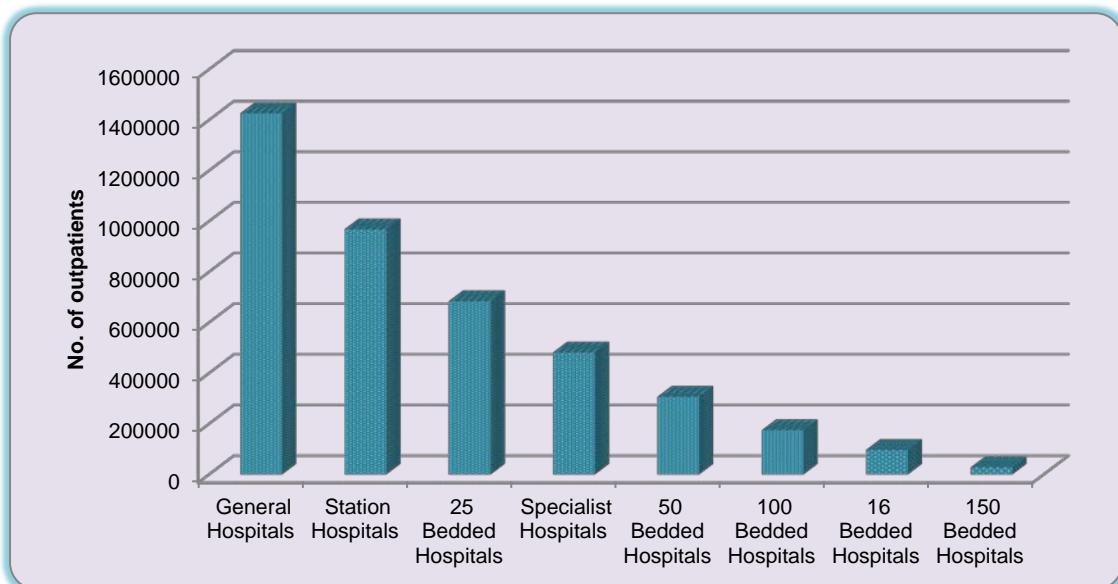

Outpatient attendances were shown in figure (18) and (19) by Regions and States and by type of hospitals. The outpatient attendance was the highest in Yangon Region and the General hospitals.

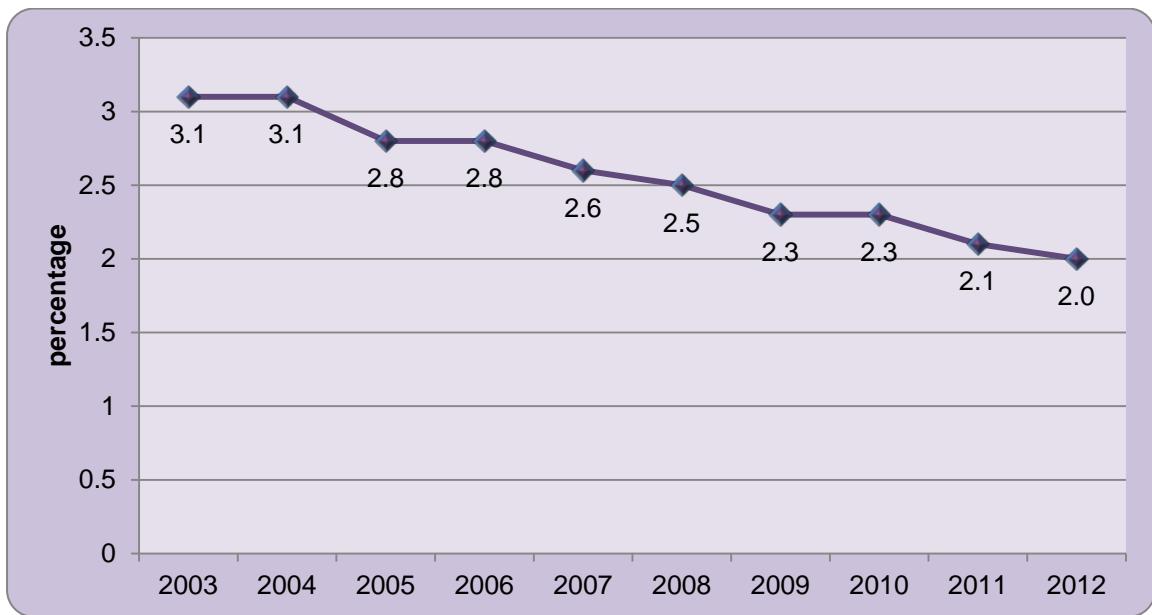

**Figure (18) Outpatient attendances by Regions and States (2012)**

**Figure (19) Outpatient attendances by Type of Hospitals (2012)**

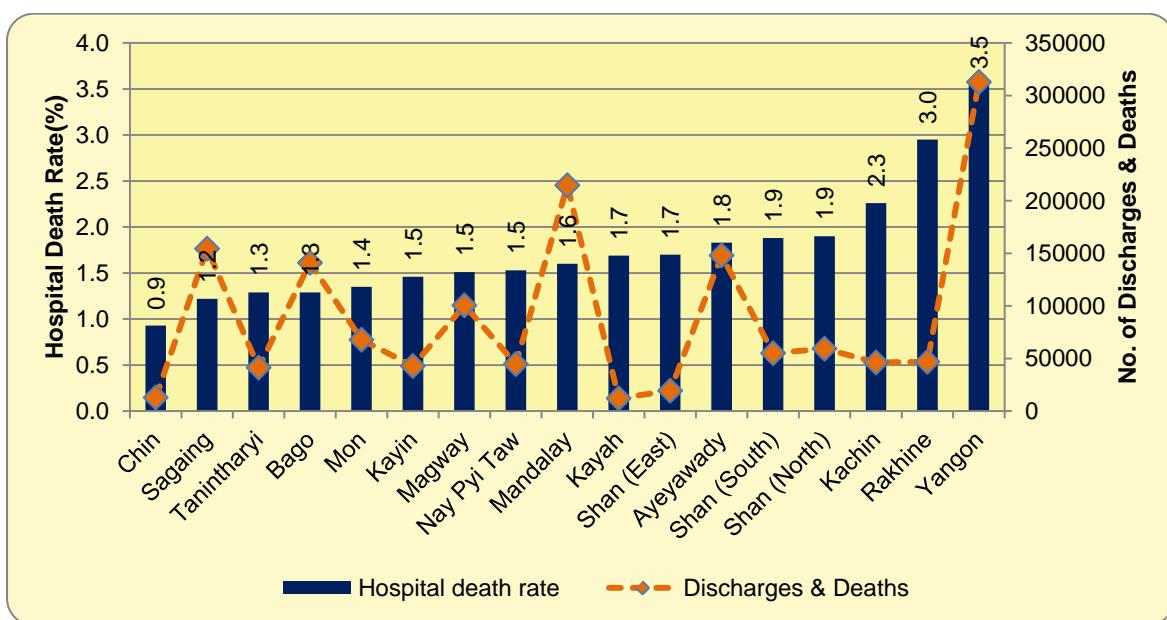

**Figure (20) Hospital Death Rate (2003-2012)**

Hospital death rate as percentage of total discharges and deaths from 2003 to 2012 was stated in the above figure. It was reduced from 3.1% in 2003 to 2% in 2012.

It was again described by Regions and State in Figure (21). Since Yangon has high density population with many large tertiary hospitals performing hospital care services, it had the highest number of discharges and deaths with the highest hospital death rate (3.5%) than any other State or Region. The lowest hospital death rate was found in Chin State. The disproportionately higher hospital death rates were found in Rakhine and Kachin States.

**Figure (21) Hospital Death Rate (2012) by Regions and States**

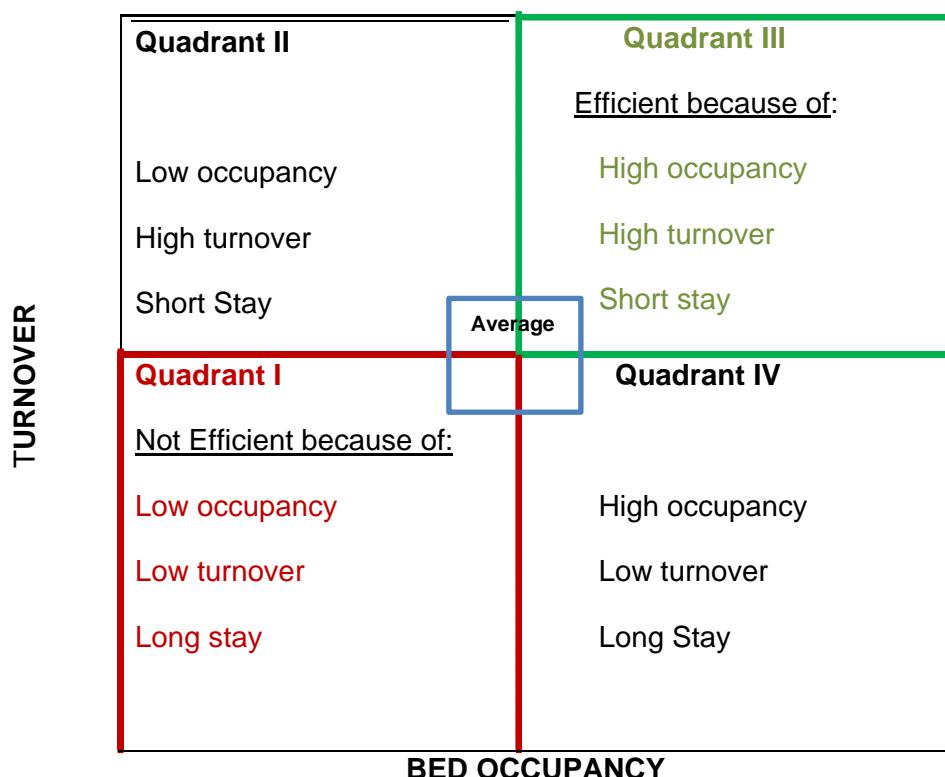

## Assessment on Hospital Efficiency with the Pabón Lasso technique

### PART C

Hospital efficiency is analyzed by applying the Pabón Lasso technique. It is a graphical method that makes use of the three indicators; bed occupancy rate, average turnover of patients per bed per year and average length of stay concurrently in assessing the relative performance of hospitals.

In this method, the bed occupancy rate based on sanctioned bed (on the horizontal axis), is plotted against average turnover of patients per bed per year (on the vertical axis), with vertical and horizontal lines dividing the diagram into four regions. The horizontal and vertical demarcations represent the mean values of those indicators. According to the functional relationship of the three measures, any point on the graph represents the reciprocal of the average length of stay of the hospital under consideration. Figure (22) represents the possible features of hospitals located in each of the four regions.

**Figure (22) Interpretation of efficiency according to Pabón Lasso\***

\*from Bamum and Kutzin

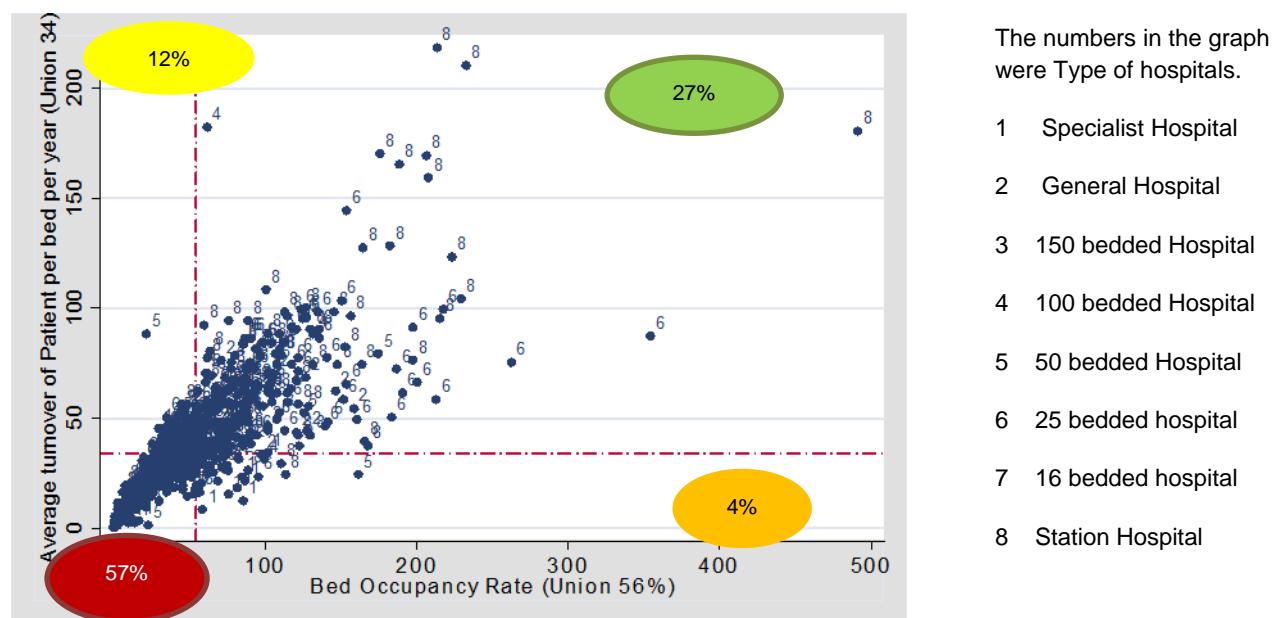

To assess the efficiency of all the Public Hospitals under Ministry of Health during 2012, union figures of bed occupancy rate based on sanctioned bed and average turnover of patients per bed per year were used as cut-off points for the Pabón Lasso graph. The

number of Hospitals used in this assessment was (918) after excluding the hospitals under other Ministries. The non-reporting hospitals under Ministry of Health were also included in this assessment.

As described in Figure (23), 247 hospitals were located in the desirable zone (Quadrant III), accounting for 27% of all hospitals under MOH while 524 hospitals (57%) were in the the Quadrant I representing poor performance of the hospitals. Hospital utilization was better in Station and 25 bedded hospitals than other large hospitals.

Among 247 hospitals in the desirable zone of Pabón Lasso graph which have higher bed occupancy rate and average turnover of patients per bed per year than Union figures, some of the hospitals had utilized more than twice of their capacity in terms of sanctioned beds. One station hospital was located at the furthermost right upper area, representing nearly 500% bed occupancy rate and 200 average turnovers of patients (Figure. 23).

**Figure (23) Pabón Lasso graph for all Public hospitals under Ministry of Health (2012)**

The hospitals which had at least conventionally set norm of at least 80% bed occupancy rate were extracted from all hospitals of the desirable zone and it was found that 160 hospitals were using  $\geq 80\%$  of the sanctioned beds. It also accounted for 17.4% of all the public hospitals under MOH. The names of these hospitals were stated together with three hospital utilization indicators in Table (6).

**Table (6) Hospitals in the desirable zone of Pabón Lasso graph which also had  $\geq 80\%$  bed occupancy rate**

Sr. No.	Name of Hospital	Region and State	Bed Occupancy Rate(%) based on sanctioned bed	Average turnover of patients per bed per year	Average duration of Stay (in days)

**Figure (24) Pabón Lasso graph for all Specialists Hospitals under MOH (2012)**

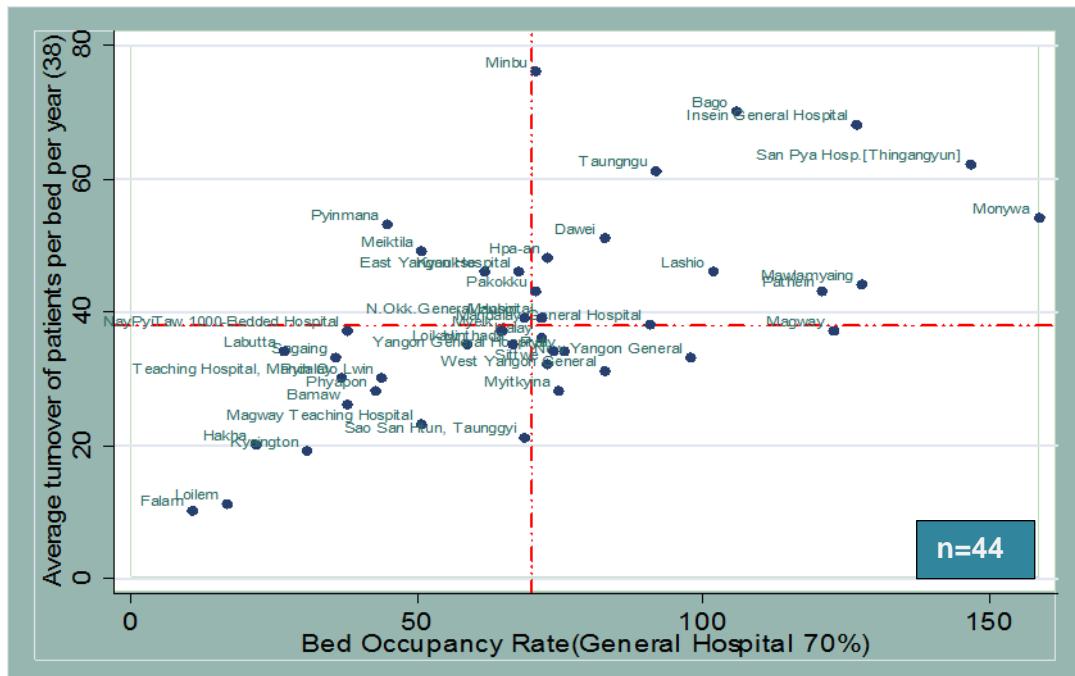

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of Specialist Hospitals under MOH

To assess efficiency of 25 specialist hospitals under MOH, the lines of demarcation were the mean values of bed occupancy rate (49%)and average turnover of patients per bed per year(20 patients) of all specialist hospitals under MOH. According to the above figure, five hospitals (20% of all) were located in the desirable zone and nine hospitals (36%) had below-average level performance.

Likewise, other types of Hospitals under MOH were also assessed for their efficiency during 2012. [Figure (25)- (29)].

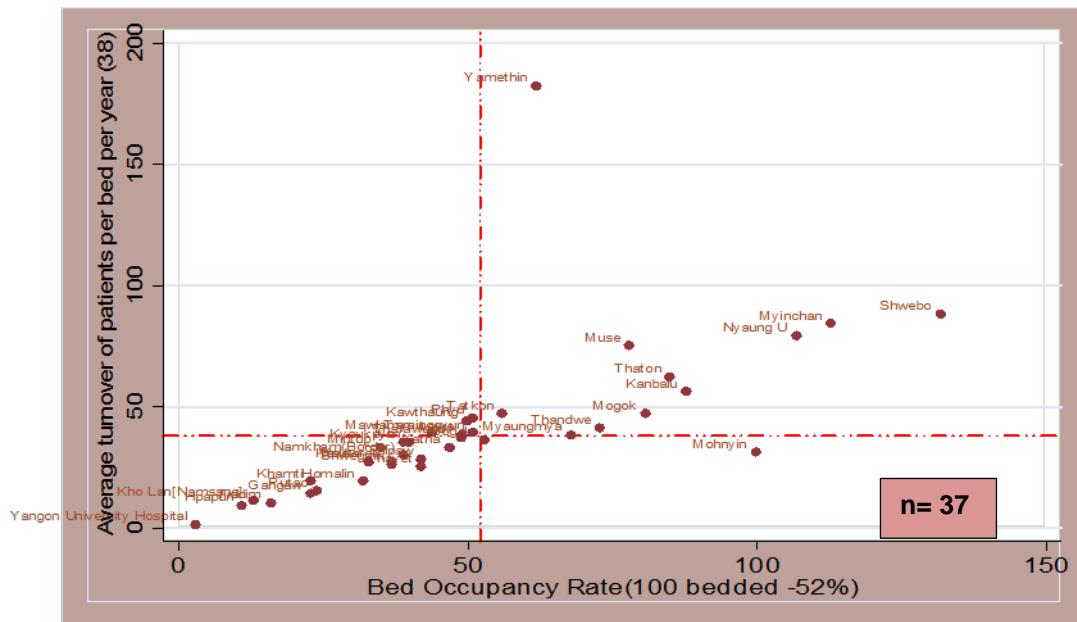

**Figure (25) Pabón Lasso graph for all General Hospitals under MOH (2012)**

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.  
n = total number of General Hospitals under MOH

Regarding hospital utilization, general hospitals under MOH were utilizing 70% of their sanctioned beds in average and average turnover was also higher than Union figure. As described in Figure (25), 14 hospitals (31.8%) were above- average level and some of them had more than 100% bed occupancy rate.

**Figure (26) Pabón Lasso graph for 100 bedded hospitals under MOH (2012)**

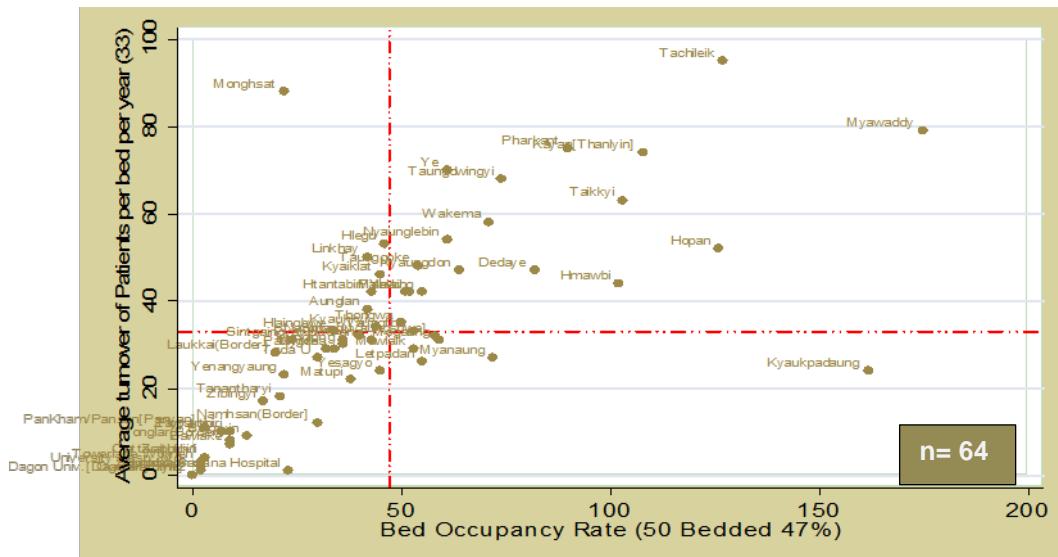

Note: Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of 100 Bedded Hospitals under MOH

Assessment on efficiency of 100 Bedded Hospitals was stated in Figure (26). Shwebo, Myinchan and Nyaung U 100 Bedded hospitals were not only present in desirable zone but also had more than 100 percent bed occupancy and higher turnover of patients.

**Figure(27) Pabón Lasso graph for 50 bedded hospitals under MOH (2012)**

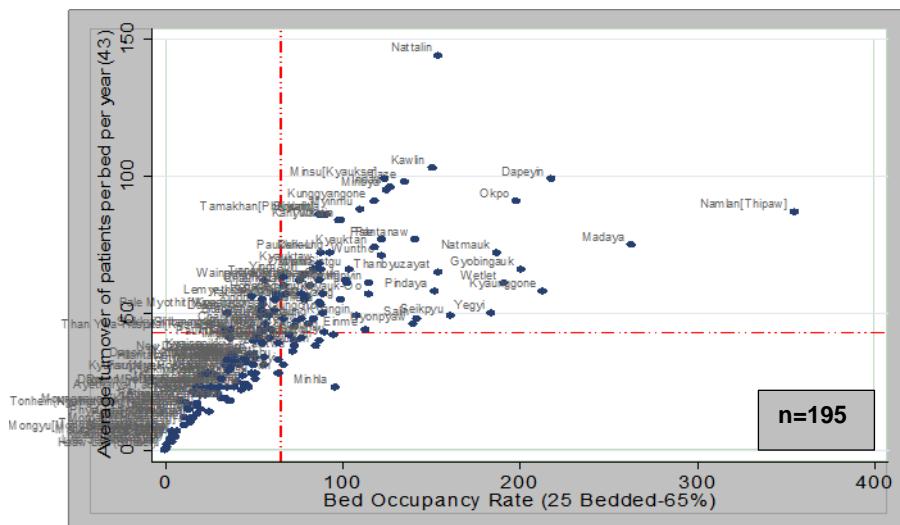

Note: Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of 50 Bedded Hospitals under MOH

In Figure (27), 19 hospitals (29.7% of 50 Bedded Hospitals) were in the right upper zone and 31 (48.4%) were in left lower zone.

**Figure (28) Pabón Lasso graph for 25 bedded hospitals under MOH (2012)**

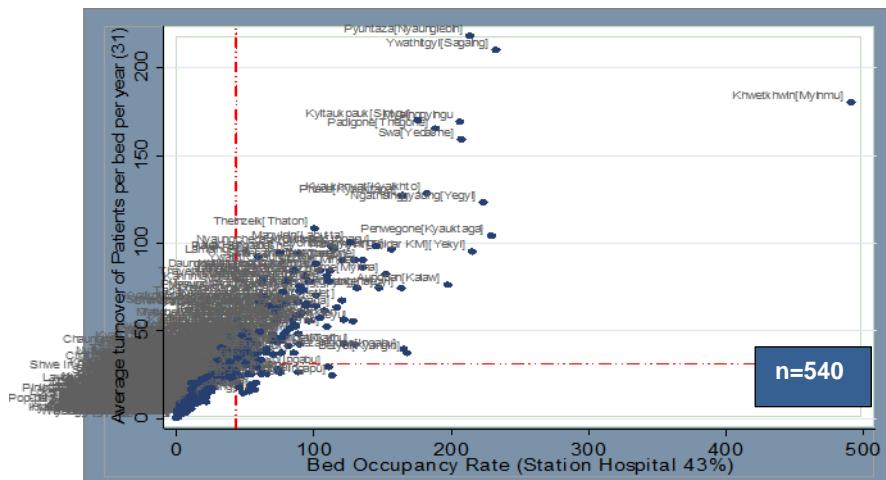

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of 25 Bedded Hospitals under MOH

Among 25 Bedded hospitals, 68 hospitals (34.9% out of 195 hospitals) were having satisfactory level of utilization while 50 % of the hospitals were found to have underutilization of hospital resources.

**Figure (29)Pabón Lasso graph for Station Hospitals under MOH (2012)**

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of Station Hospitals under MOH

Figure (29) shows assessment of 540 station hospitals under the Ministry of Health. It was found that 26 % of these hospitals( 141 hospitals)had higher bed occupancy rate based on sanctioned bed, ranging from 43% to nearly 500%, and higher average turnover of patients per bed per year, ranging from 31 to nearly 200 patients. Many hospitals in this regions were using about twice of the capacity in terms of the sanctioned bed.

**Figure (30) Total Number of Surgical Operation performed at Public Hospitals by Regions and States (2012)**

In the above figure, surgical operations performed under different types of anaesthesia were described by Regions and States. Surgical operations were mostly performed at the public hospitals in Yangon Region followed by those in Mandalay Region. In Shan (East), Chin and Kayah States, a few surgical operations were performed. In most Regions and States, most of the surgical operations were performed under spinal anaesthesia followed by local anaesthesia.

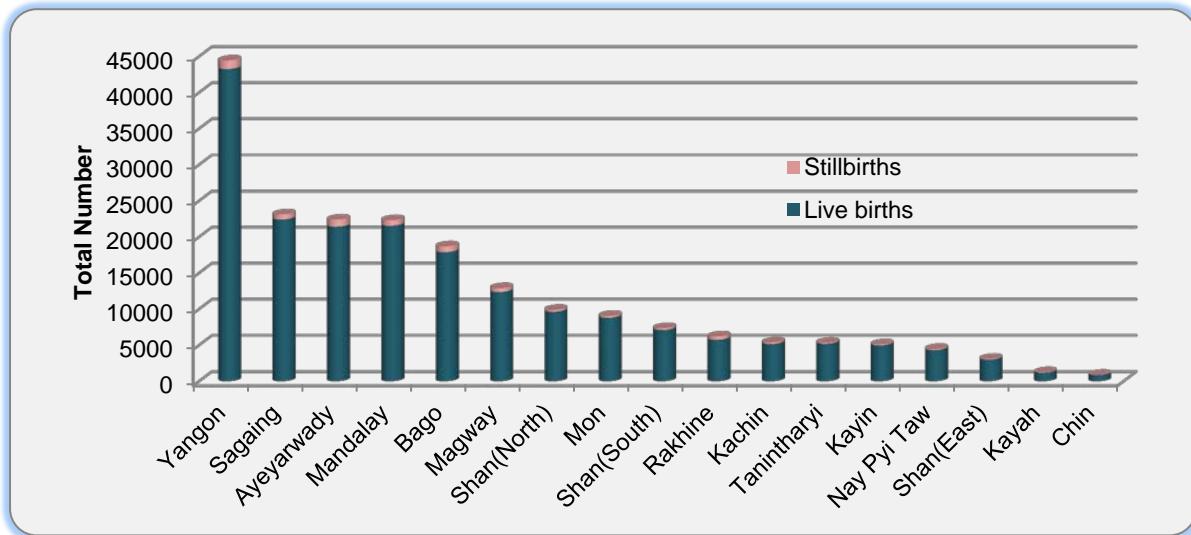

**Figure (31) Average Number of Surgical Operation in Each Type of Hospitals (2012)**

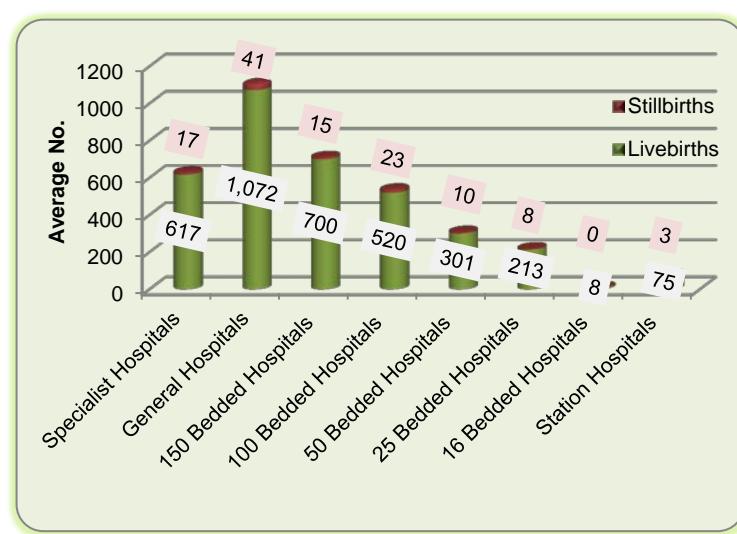

Note: Specialist hospitals which are not performing any surgical operation (eg, mental hospitals) are not excluded from the list of hospitals. Average number of operation by type of anaesthesia in specialist hospitals may be affected by type of specialty.

Average numbers of operations in each type of hospital in 2012 were illustrated in Figure (31). Various types of surgical operations were mostly performed at general hospitals. Surgical operations performed under spinal anesthesia were more than 1300 cases on average at General hospitals, representing nearly half of all types of operations. It was also found the highest in other large hospitals, such as 150 bedded, 100-bedded and 50- bedded hospitals. At Specialist hospitals and those of small hospital sizes, the preferred type of anesthesia in operation was found to be local anesthesia.

**Figure (32) Frequency distributions of Deliveries by Regions and States (2012)**

According to Figure (32), hospital deliveries were the highest in Yangon, representing more than 40,000 delivery cases whereas the second highest Regions such as Sagaing, Ayeyawady and Mandalay had half of that figure. Kayah and Chin had the lowest hospital deliveries.

**Figure (33) Average No. of Livebirths and Stillbirths in each type of Hospitals (2012)**

Distribution of average number of live births and stillbirths for each type of hospitals in 2012 was described in Figure (33). Average numbers of Livebirths and stillbirths in each General hospital were 1072 and 41 respectively in 2012, representing the highest births than any other hospital type.

Note: The average number of deliveries in specialist hospitals may be affected by its type of specialty.

**Figure (34) Abortion Rate by Type of Hospitals (2012)**

Abortion rate as percentage of total deliveries and abortion cases in specific type of hospitals during 2012 was calculated and illustrated in the above figure, ranging from 5.5% in 16-bedded to 19% in Station hospitals. It was 16% in Union level.

**Figure (35) Abortion Rate by Regions and States (2012)**

As shown in Figure (35), abortion cases accounted for 13.3% to 27.7% of total deliveries and abortions in the public hospitals of each State or Region. Chin had the highest abortion rate(27.7%), followed by Rakhine, Kayin and Kachin States. In Shan (North), abortion rate was the lowest (13.3%).

## **SECTION II**

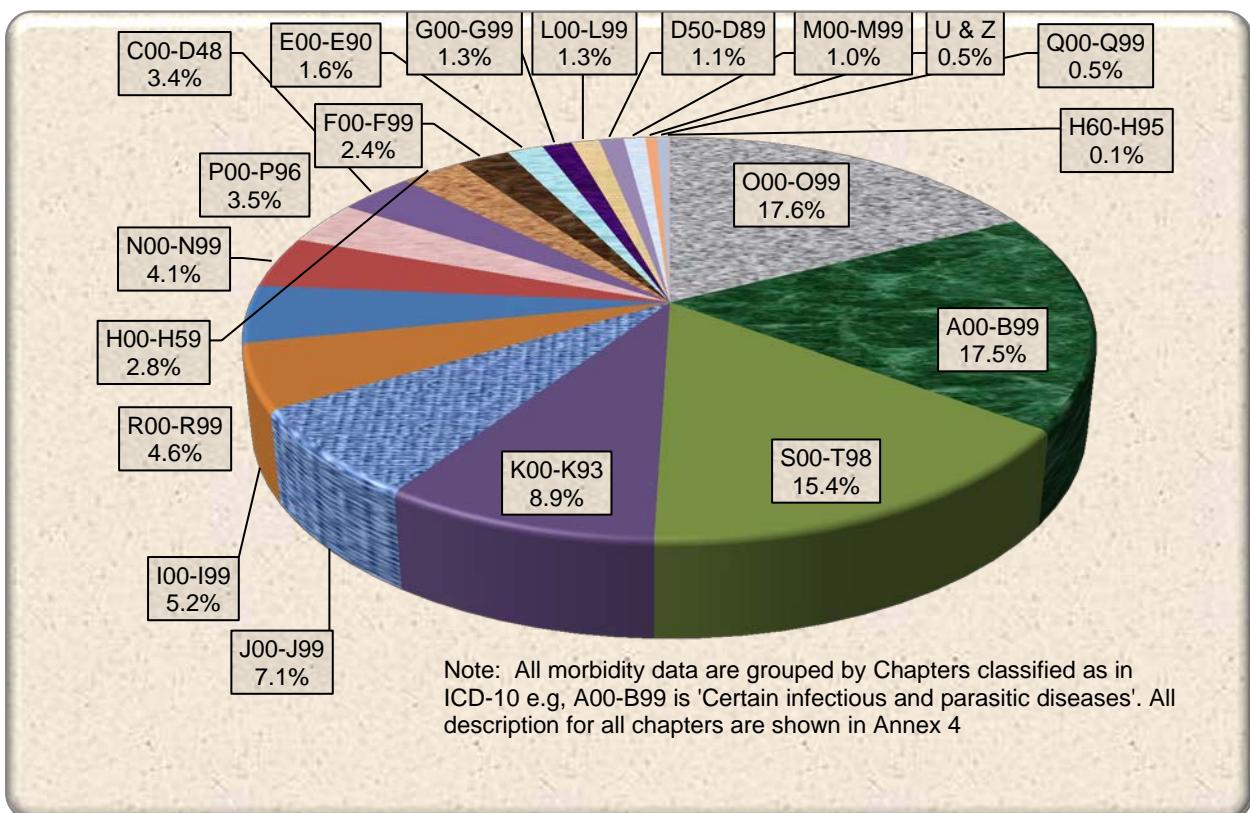

**MORBIDITY AND MORTALITY  
STATISTICS**

### (A) Inpatient Morbidity and Mortality Patterns of Hospitals

In this section, all morbidity and mortality statistics are described by tabular and graphical presentation. In graphical presentation, causes of morbidity and mortality among all inpatients were described chapter-wise as classified in ICD-10. All data were compiled and analyzed with single condition morbidity analysis according to Rules and Guidelines for morbidity and mortality coding (ICD-10, WHO).

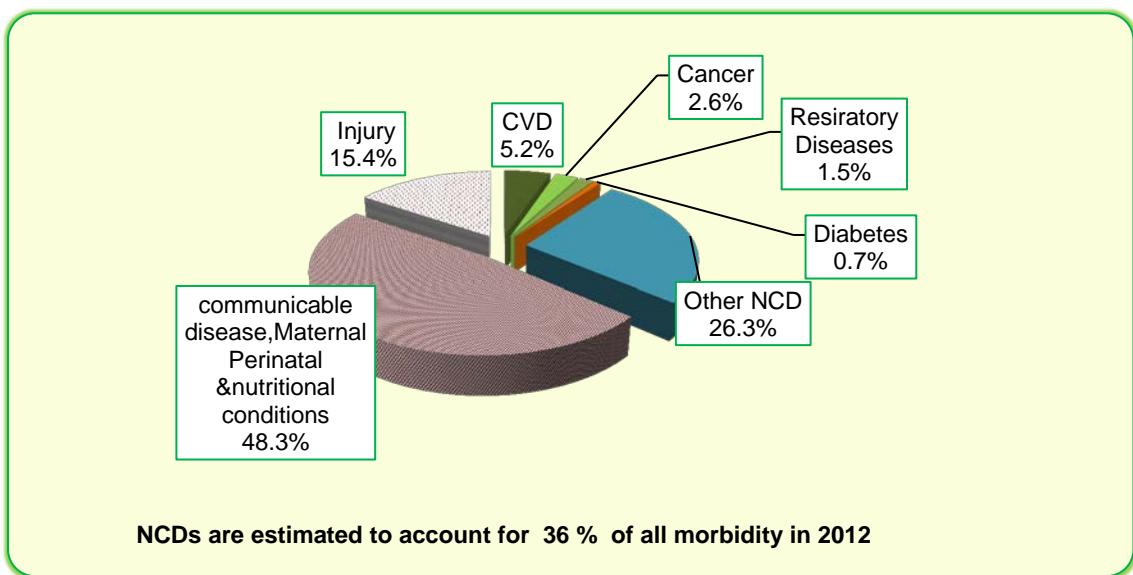

**Figure (36) Proportional Morbidity of all Cases of Hospitalization (2012)**

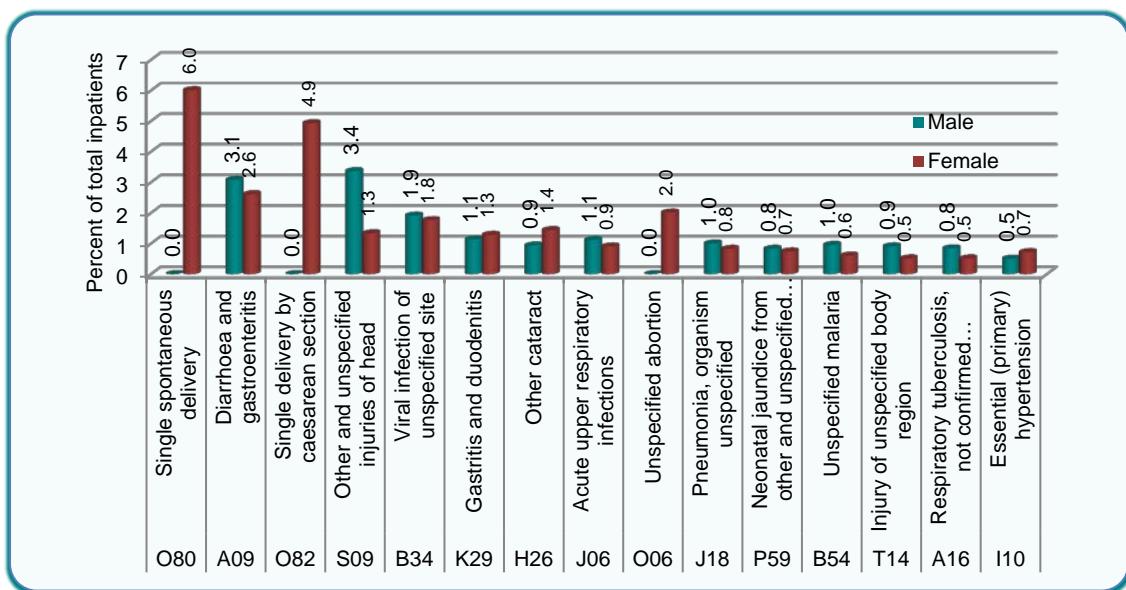

According to the above figure, it was found that O00-O99, which are conditions relating to pregnancy, child births and puerperium, accounted for the highest proportion of morbidity among all inpatients. The proportional morbidity presented in this section should be interpreted with consideration of the limitations of the data. Because of resource limitation, the codes for types of delivery are taken as main condition and included under the group (O00- O99). The second leading causes of morbidity were A00-B99, certain infectious and parasitic diseases. The third group was S00-T98 that includes codes for injuries, poisoning and certain other consequences of external causes.

The proportional morbidity was again analyzed to estimate proportion of non-communicable disease among all hospitalized patients and illustrated in Figure (37).

**Figure (37) Proportional morbidity and Estimated proportion of Non-Communicable Diseases (2012)**

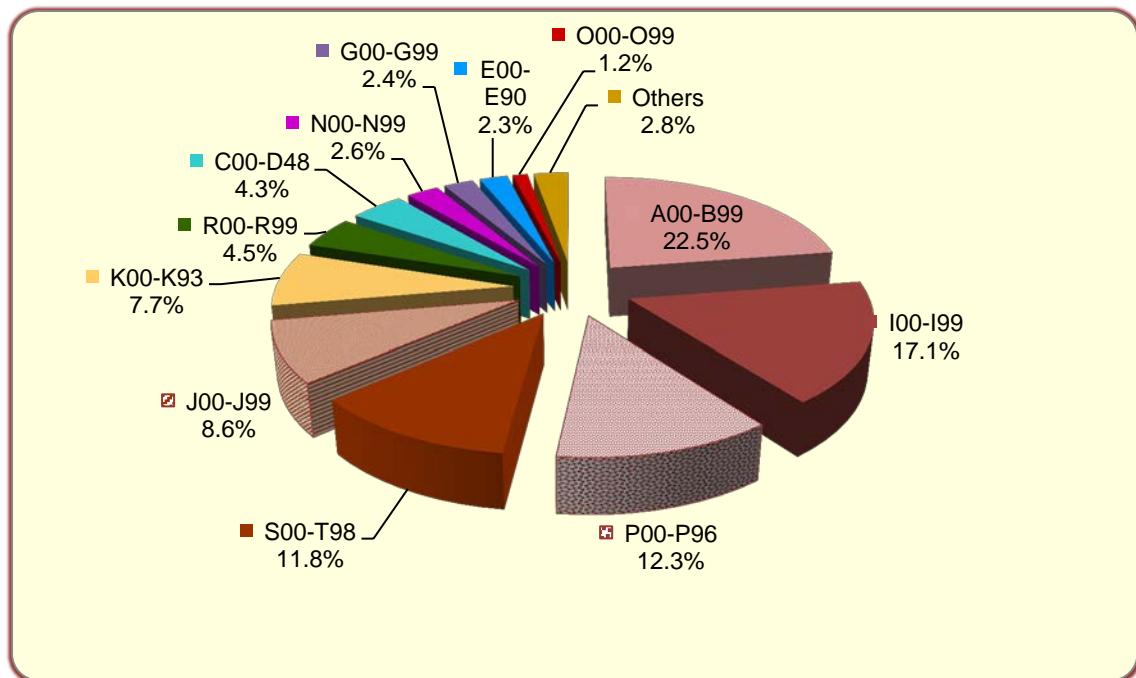

**Figure (38) Proportion of Leading causes of Hospitalization among all inpatients (2012)**

As shown in above figure, single spontaneous delivery was the first leading cause of hospitalization accounting for 6% of total inpatients. The second was diarrhea and gastroenteritis of presumed infectious origin, 3.1% in male and 2.6% in female. Unspecified injury of head in male accounted for 3.4% of total inpatients, representing the highest proportion among male inpatients and it was 1.3% in female.

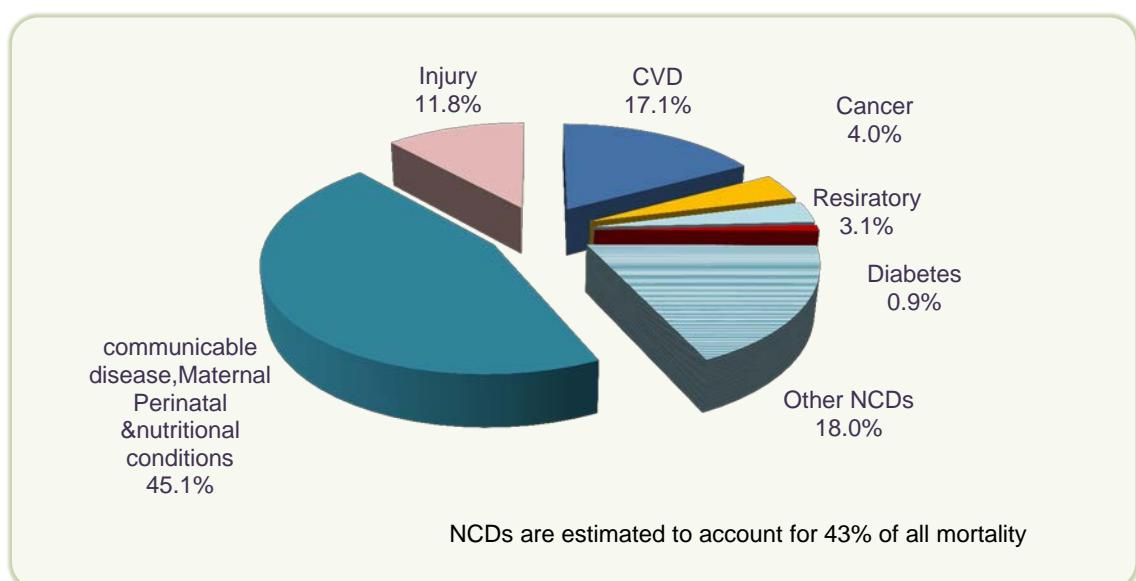

Proportional mortality and the estimated proportion of Non-communicable diseases among all cases of mortality was described in Figure (39) and (40). Infectious and parasitic diseases (A00-B99) was the highest proportion accounted for 22.5 % of all cases of mortality followed by diseases of the circulatory system (I00-I99), 17.1%. [Figure (39)]. Non-communicable disease accounted for 43% of all cases of mortality in hospitals, out of which the highest proportion (17.1%) were cardiovascular disease. [Figure (40)]

**Figure (39) Proportional Mortality among all cases of Hospitalization (2012)**

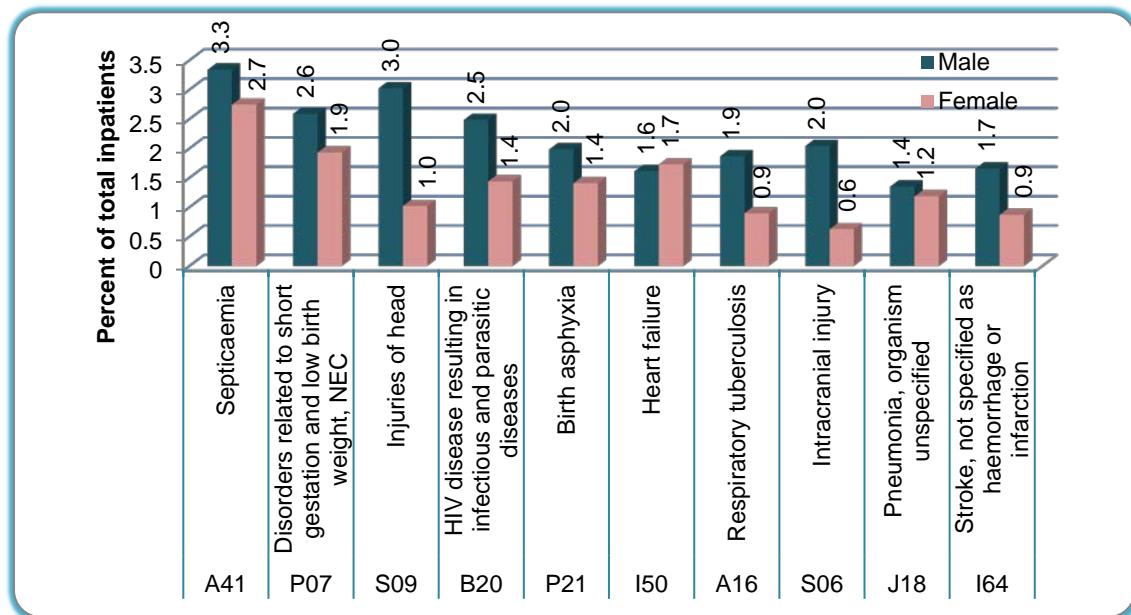

Note: All mortality are grouped by Chapters classified as in ICD-10 e.g, A00-B99 is 'Certain infectious and parasitic diseases'. All description for all chapters are shown in Annex 4

**Figure (40) Proportional mortality and Estimated proportion of Non-communicable diseases (2012)**

**Figure (41) Proportion of Leading causes of Mortality among all cases of Hospitalization**

Leading causes of mortality among all cases of hospitalization were described in Figure (41) as percentage of total inpatients. Septicaemia was found the highest, 3.3 % in male and 2.7% in female. Disorder related to short gestation and low birth weight and Birth asphyxia were found among the leading causes of mortality accounting for 4.5% (2.6% in male, 1.9% in female) and 3.4% (2% in male, 1.4% in female) respectively. Unspecified injury of head was the third leading causes of mortality and the proportion was 3 times higher in male than in female.

**Table (11) Single Leading Causes of Morbidity by Sex & Duration of Stay for Union (2012)**

Sr. No.	ICD-10 Detail List	Causes	Sex						Avg. Duration of Stay	
			Male		Female		Total			
			Number	%	Number	%	Number	%		
1	O80	Single spontaneous delivery*	0	0.0	91345	11.0	91345	6.0	4.9

7	H26	Other cataract	14246	2.1	21835	2.6	36081	2.4	3.6	
8	J06	Acute upper respiratory infections of multiple and unspecified sites	17013	2.5	13740	1.7	30753	2.0	5.9	
9	O06	Unspecified abortion	0	0.0	30604	3.7	30604	2.0	4.0	
10	J18	Pneumonia, organism unspecified	15196	2.2	12518	1.5	27714	1.8	6.1	
11	P59	Neonatal jaundice from other and unspecified causes	12545	1.8	11236	1.4	23781	1.6	5.2	
12	B54	Unspecified malaria	14526	2.1	9207	1.1	23733	1.6	6.2	
13	T14	Injury of unspecified body region	13761	2.0	7772	0.9	21533	1.4	4.5	
14	A16	Respiratory tuberculosis, not confirmed bacteriologically or histologically	12751	1.8	7788	0.9	20539	1.4	8.7	
15	I10	Essential (primary) hypertension	7671	1.1	10901	1.3	18572	1.2	5.5	
	...	All other causes	440166	63.5	429946	52.1	870112	57.2	8.6	
		Total	692085	100.0	828051	100.0	1520136	100.0	5.6	

(\*)Based on International Statistical Classification of Diseases and Related Health Problems (ICD-10) coding, the condition to be used for single-condition morbidity analysis is the main condition treated or investigated during the relevant episode of health care. Therefore, single spontaneous delivery is coded and presented as one of the causes of morbidity.

**Table (12) Single Leading Causes of Mortality by Sex for Union (2012)**

## (C) MORBIDITY AND MORTALITY STATISTICS FOR TARGET POPULATION

In this section, tabulation list for Morbidity adopted by the World Health Assembly in 1990 according to ICD-10 was used.

**Table (35) Leading causes of Morbidity in Neonate (1-28 days) (2012)**

Sr. No.	Code	Description	Male	Female	Total	% of Total cases
1	P59	Neonatal jaundice from other and unspecified causes	12531	11222	23753	38.1
2	P36	Bacterial sepsis of newborn	4108	3581	7689	12.3
3	P21	Birth asphyxia	3665	2852	6517	10.5
4	P07	Disorders related to short gestation and low birth weight, not elsewhere classified	2493	2468	4961	8.0
5	P39	Other infections specific to the perinatal period	1299	1115	2414	3.9
6	P38	Omphalitis of newborn with or without mild haemorrhage	620	494	1114	1.8
7	Z76	Persons encountering health services in other circumstances	485	463	948	1.5
8	P22	Respiratory distress of newborn	560	380	940	1.5
9	P24	Neonatal aspiration syndromes	474	423	897	1.4
10	A09	Diarrhoea and gastroenteritis of presumed infectious origin	509	335	844	1.4
11	P81	Other disturbances of temperature regulation of newborn	431	411	842	1.4
12	J06	Acute upper respiratory infections of multiple and unspecified sites	408	325	733	1.2
13	J18	Pneumonia, organism unspecified	377	314	691	1.1
14	P03	Fetus and newborn affected by other complications of labour and delivery	299	301	600	1.0
15	P08	Disorders related to long gestation and high birth weight	330	229	559	0.9
16	B34	Viral infection of unspecified site	216	207	423	0.7
17	P00	Fetus and newborn affected by maternal conditions that may be unrelated to present pregnancy	153	166	319	0.5
18	P57	Kernicterus	192	119	311	0.5
19	P05	Slow fetal growth and fetal malnutrition	156	140	296	0.5
20	A41	Other septicaemia	132	143	275	0.4
...	All other causes		3966	3240	7206	11.6
	Total		33404	28928	62332	100.0

**Table (36) Leading causes of Morbidity in under one year age group (2012)**

Sr. No	Code	Description	Male	Female	Total	% of Total cases
1	P59	Neonatal jaundice from other and unspecified causes	12541	11230	23771	16.6
2	A09	Diarrhoea and gastroenteritis of presumed infectious origin	12696	8553	21249	14.8
3	J06	Acute upper respiratory infections of multiple and unspecified sites	8643	6554	15197	10.6
4	J18	Pneumonia, organism unspecified	7653	5696	13349	9.3

## Outpatient Morbidity Statistics

## PART B

This section presents outpatient morbidity statistics collected from various outpatient departments all over the country for one day attendance in every season of the year, summer, rainy and winter. Ten percent of attendances of all outpatient departments are described in Table .44, 45 and 46. On each day, most of the patients were taking health care services for antenatal screening and other supervision of pregnancy, other symptoms, signs and other abnormal clinical and laboratory findings and fever of unknown origin.

**Table (44) Single leading causes of outpatient morbidity statistics, 2012  
[Summer Season]**

Sr. No.	ICD-10 Basic Code	Causes	Male		Female		Total	
			No.	%	No.	%	No.	%
1	294	Antenatal screening and other supervision of pregnancy	0	0.0	191	19.9	191	11.1

## **ANNEX 2**

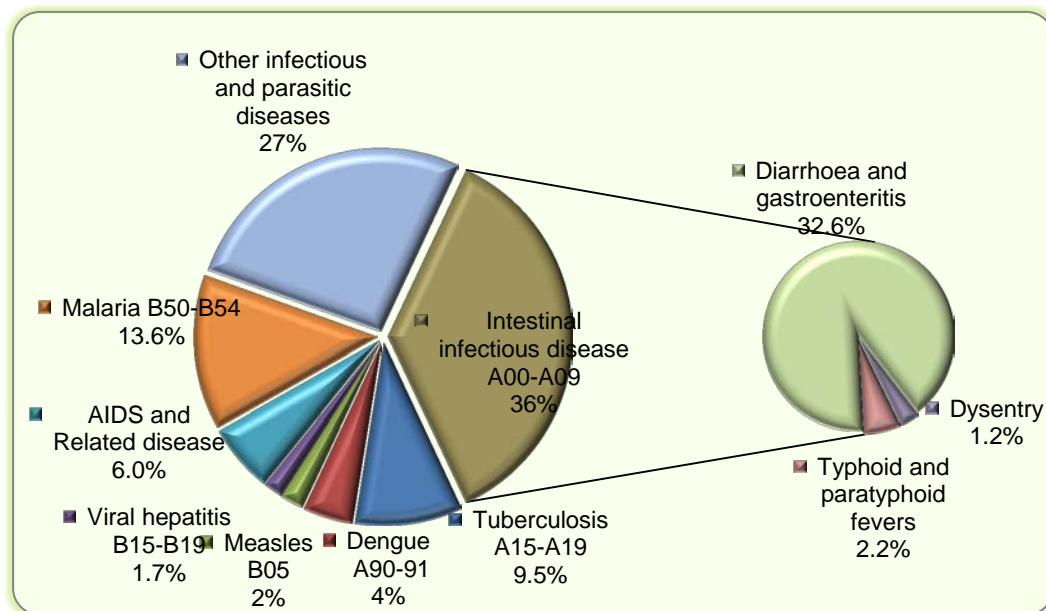

**Graphical Presentation of Morbidity and Mortality  
by ICD-10 Coding**

## GRAPHICAL PRESENTATION OF MORBIDITY FINDINGS

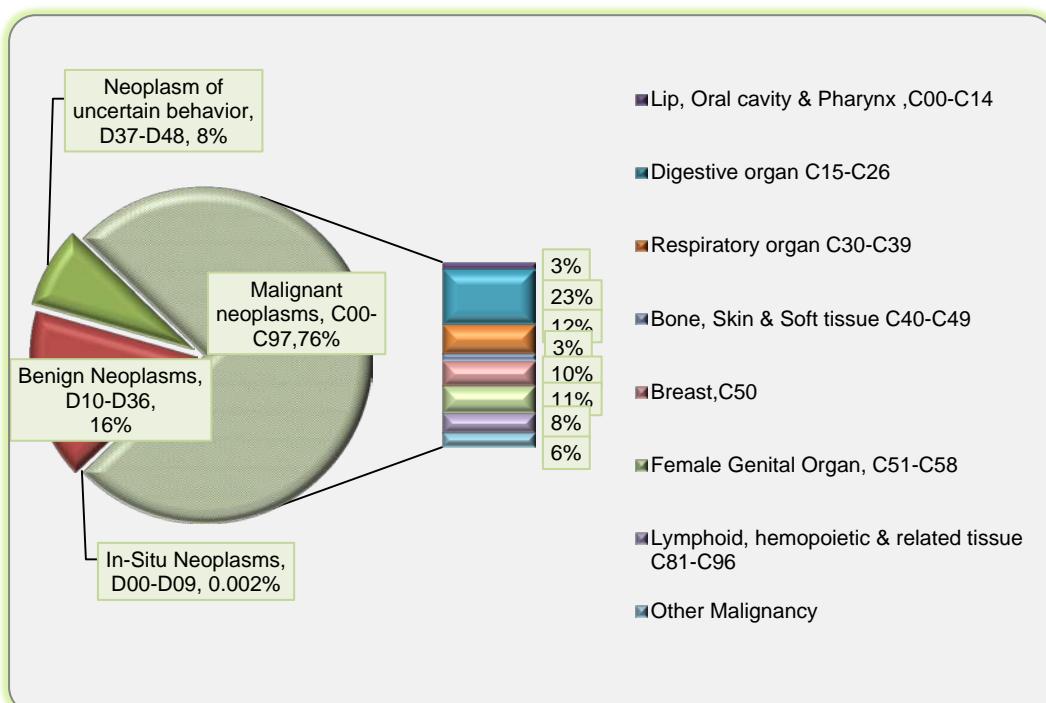

### I. Certain Infectious and Parasitic diseases (A00-B99)

**Figure (1) Proportion of Selected Infectious Diseases among Certain Infectious and Parasitic diseases**

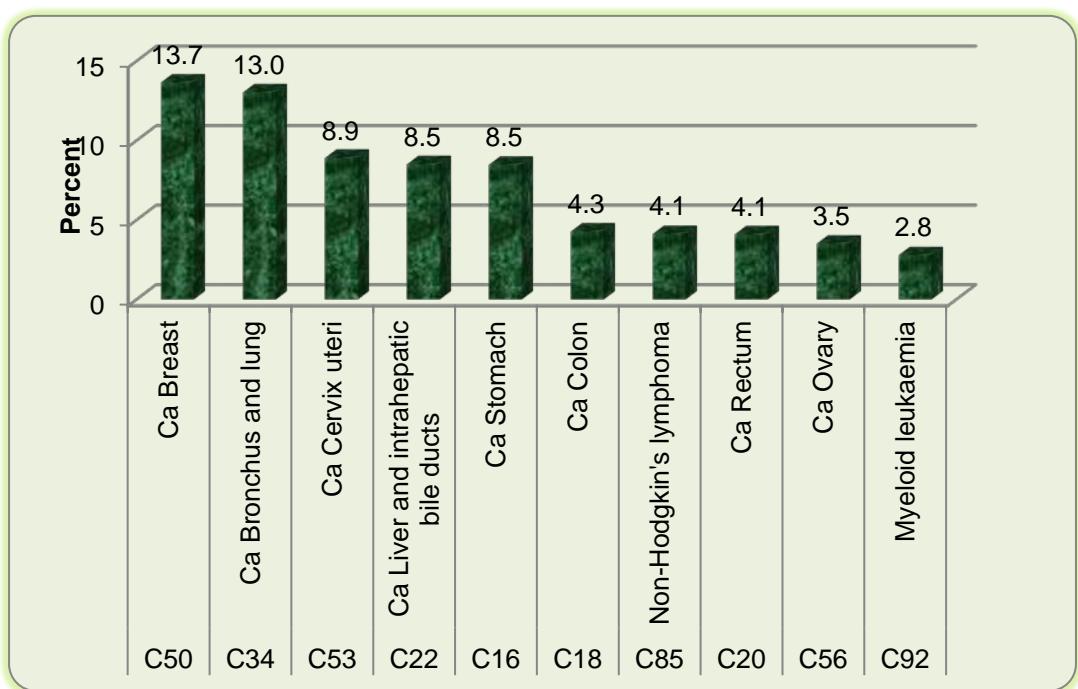

### II. Neoplasm (C00-D48)

**Figure (2) Percent Distribution of all cases of Neoplasm**

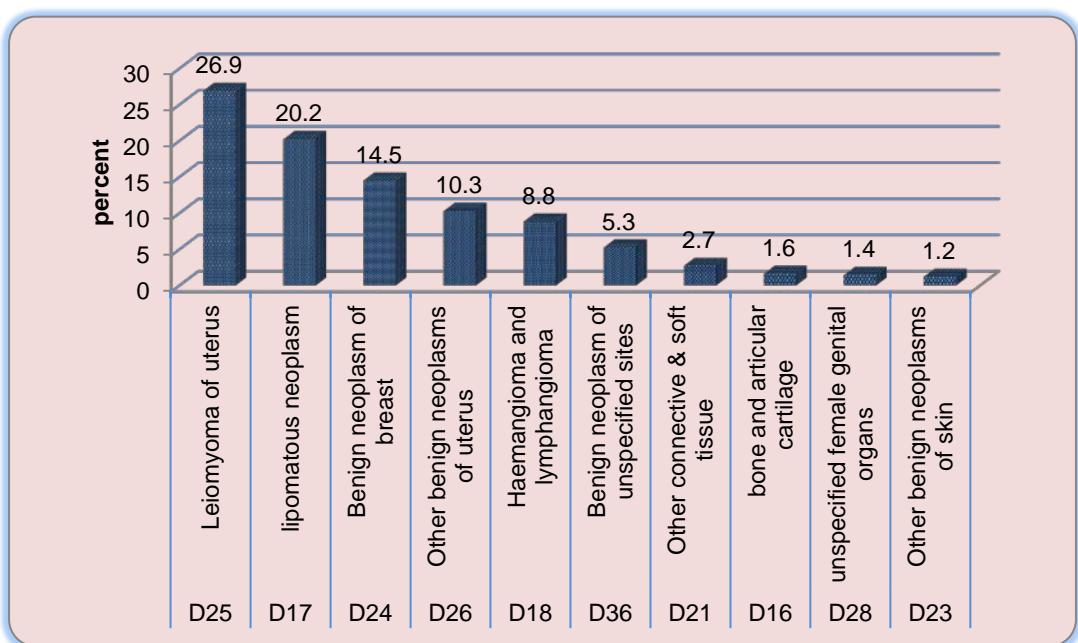

Note: Legends are described for malignant neoplasms

**Figure (3) Proportion of Top 10 Cases among all Malignant Neoplasm**

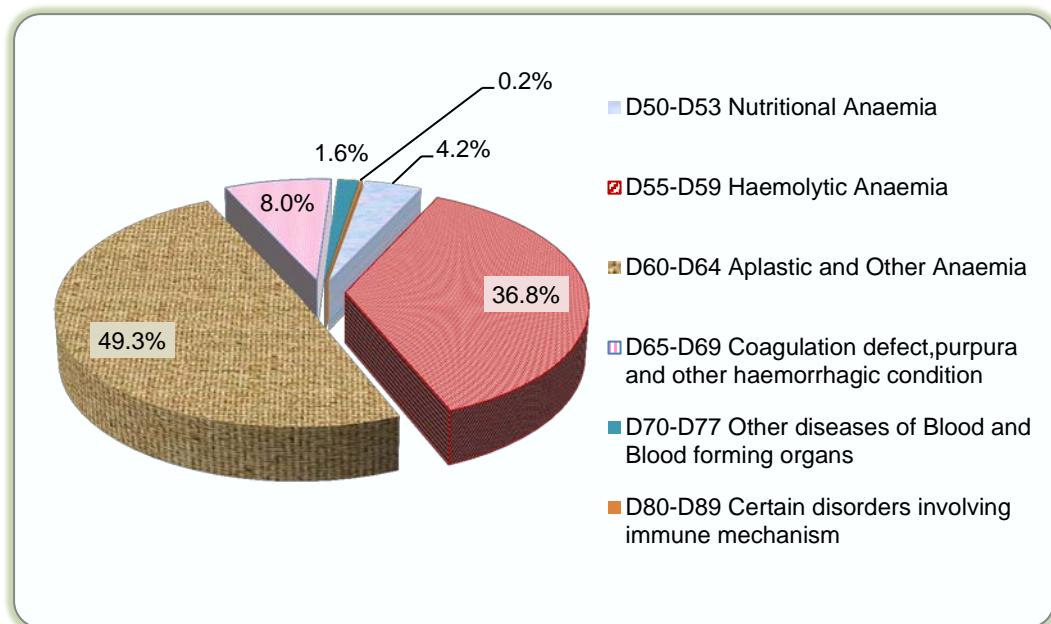

**Figure (4) Proportion of Top 10 diseases among all Benign Neoplasms**

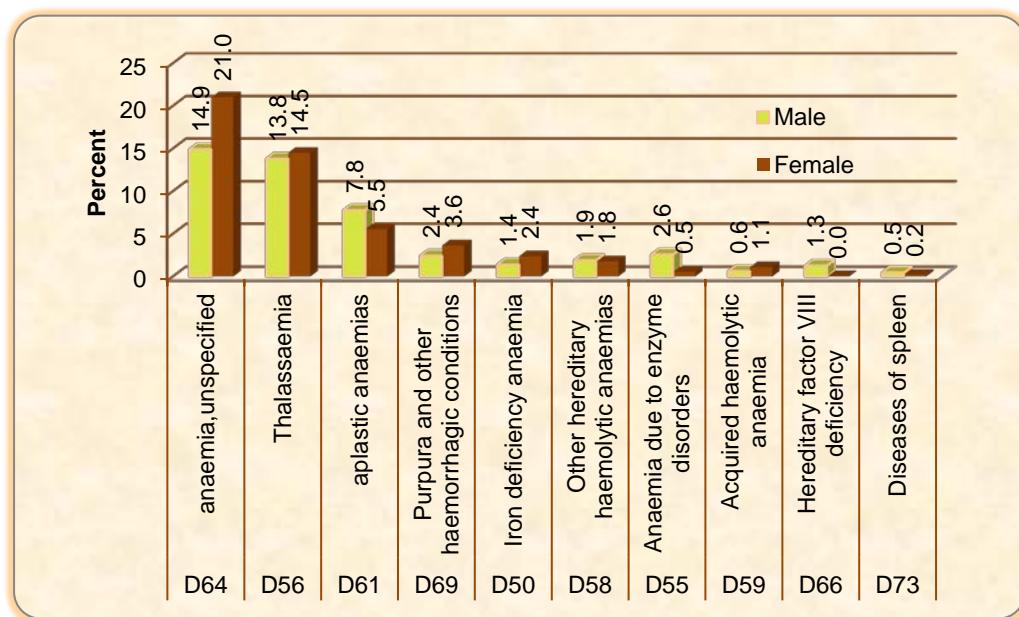

**III. Diseases of the blood and blood-forming organs and disorders involving the immune mechanism (D50-D89)**

**Figure (5) Percent distribution of diseases of blood and blood-forming organs and disorders involving the immune mechanism (D50-D89)**

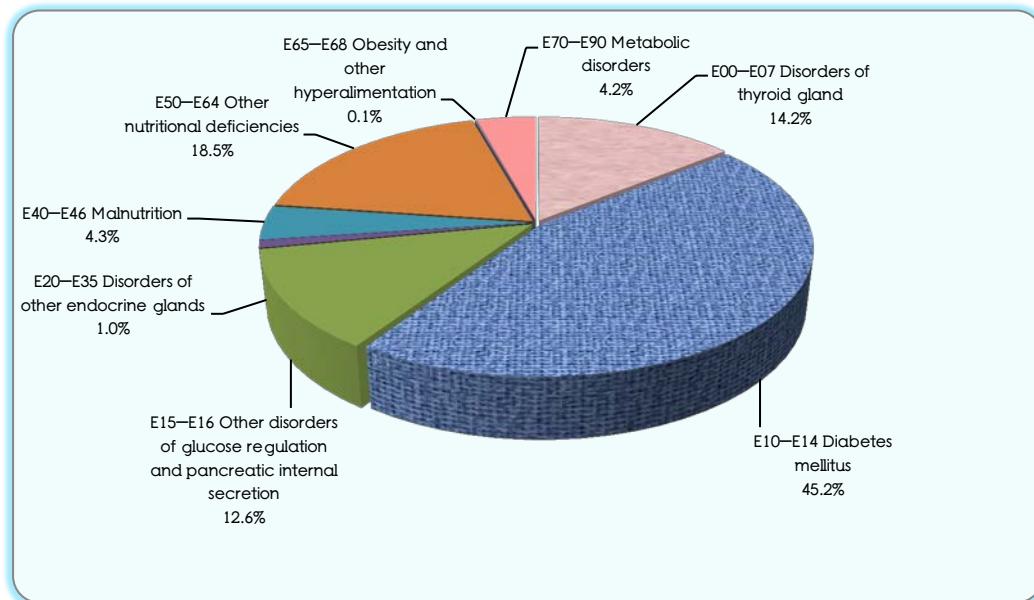

**Figure (6) Proportion of Top 10 diseases among all Blood And Blood-Forming Organ Diseases**

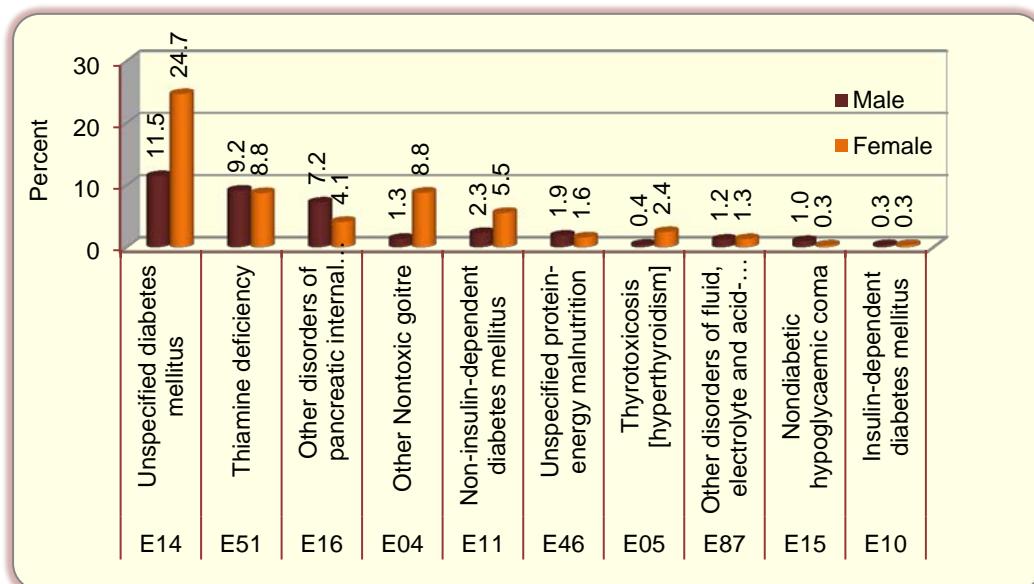

#### IV. Endocrine, Nutritional and Metabolic diseases (E00-E90)

**Figure (7) Percent distribution of Endocrine, Nutritional and Metabolic diseases (E00-E90)**

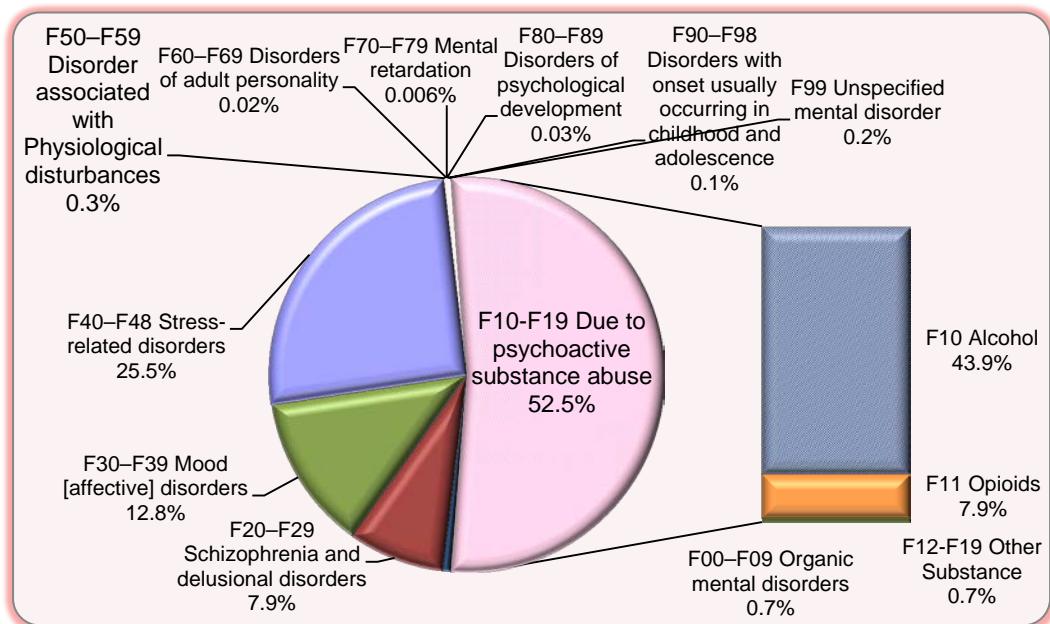

**Figure (8) Proportion of Top 10 diseases among all Endocrine and Metabolic Diseases**

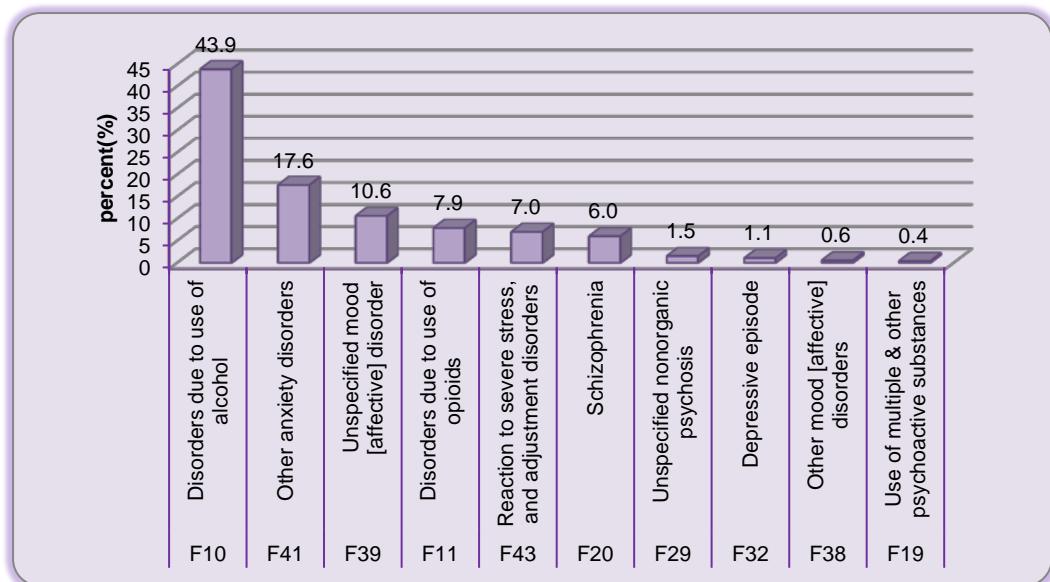

## V. Mental and Behavioral Disorder (F00-F99)

**Figure (9) Percent Distribution of Mental and Behavioral Disorder (F00- F99)**

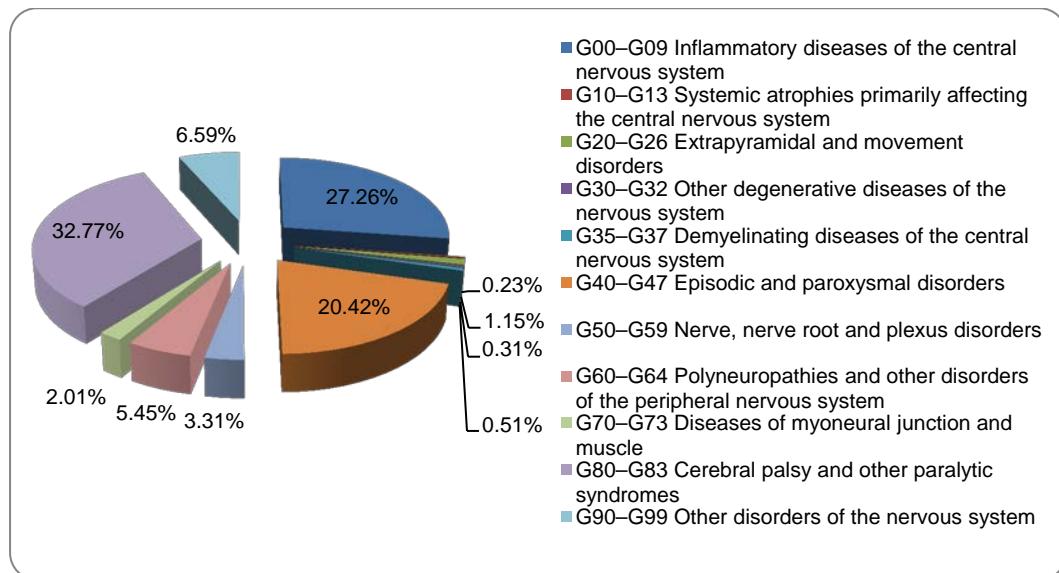

**Figure (10) Proportion of Top 10 Disorders among all mental and Behavioral Disorders**

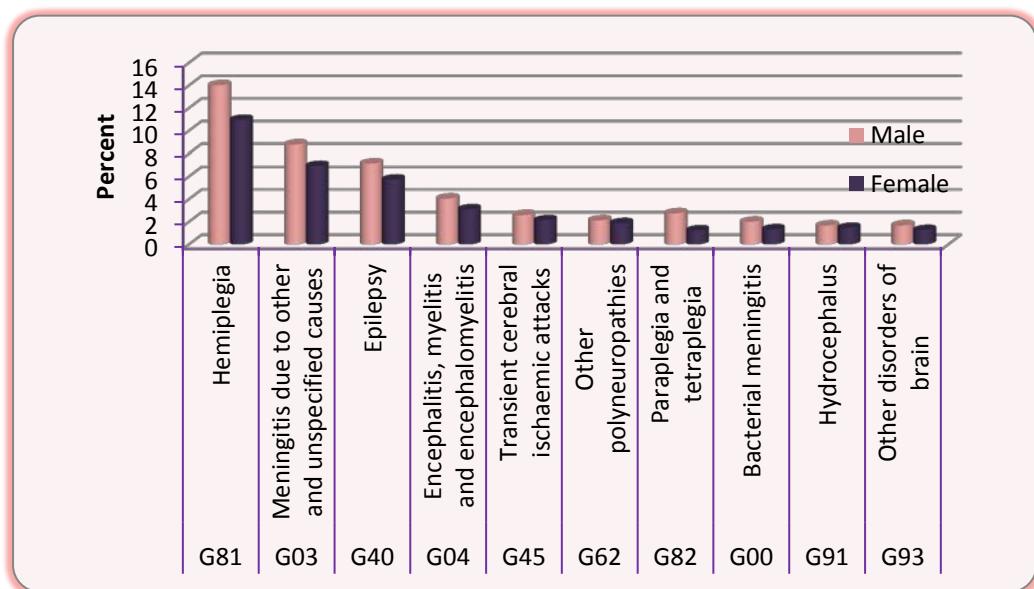

## VI. Diseases of the Nervous System (G00-G99)

**Figure (11) Percent Distribution of all cases of Nervous system (G00-G99)**

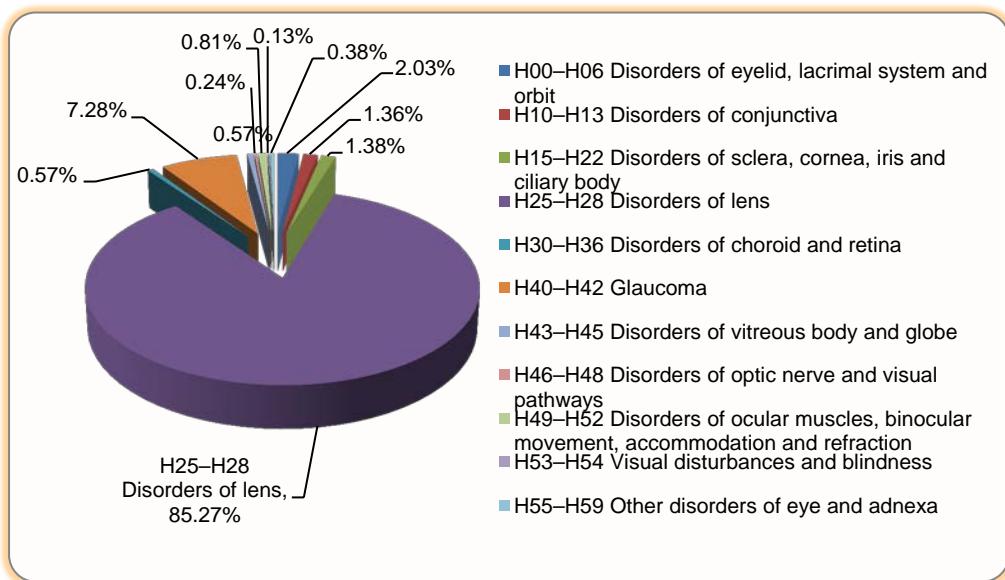

**Figure (12) Proportion of Top 10 diseases among all Diseases of the Nervous System**

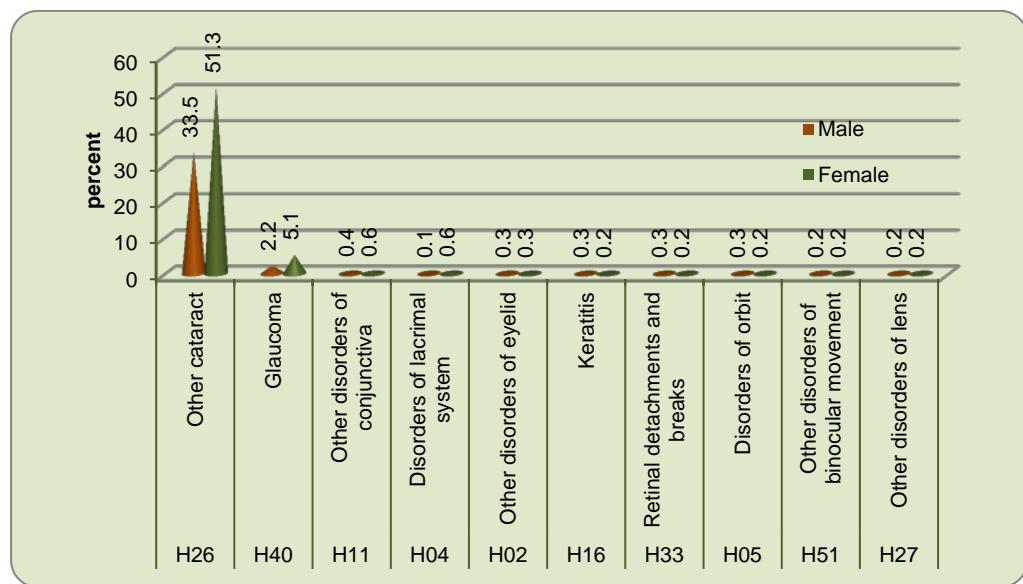

## VII. Diseases of the Eye and Adnexa (H00-H59)

**Figure (13) Percent Distribution of Diseases of the Eye and Adnexa (H00-H59)**

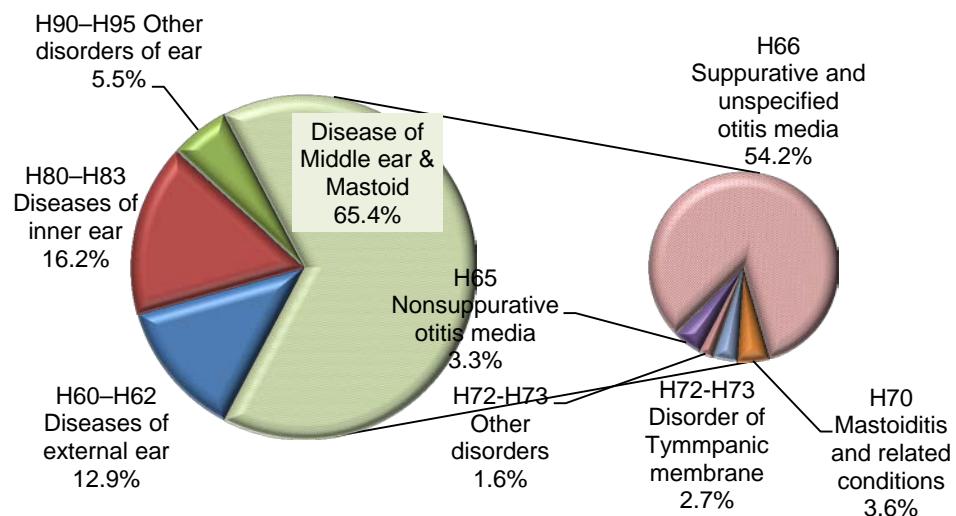

**Figure (14) Proportion of Top 10 diseases among all Diseases of Eye and Adnexa**

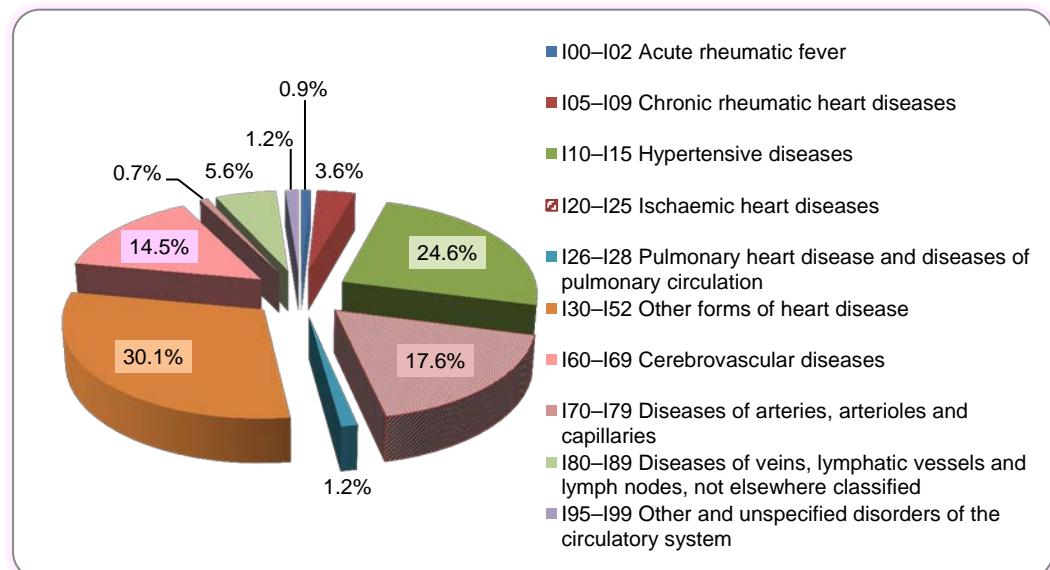

## VIII. Diseases of the Ear and Mastoid Process (H60-H62)

**Figure (15) Percent Distribution of Diseases of the Ear and Mastoid Process (H60-H62)**

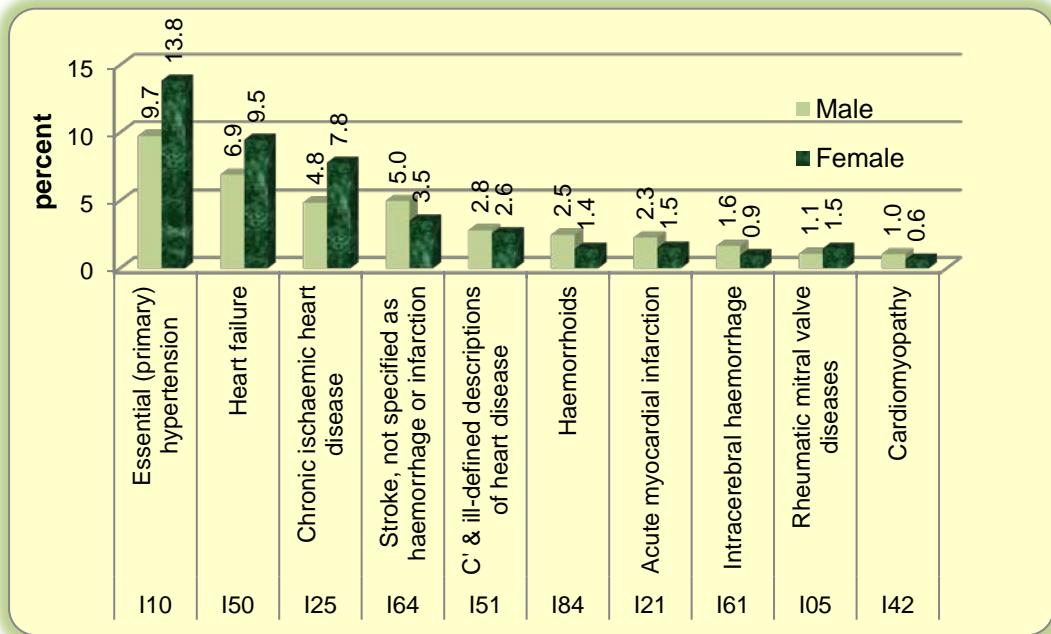

## IX. Diseases of the Circulatory System (I00- I99)

**Figure (16) Percent distribution of Diseases of the Circulatory System (I00-I99)**

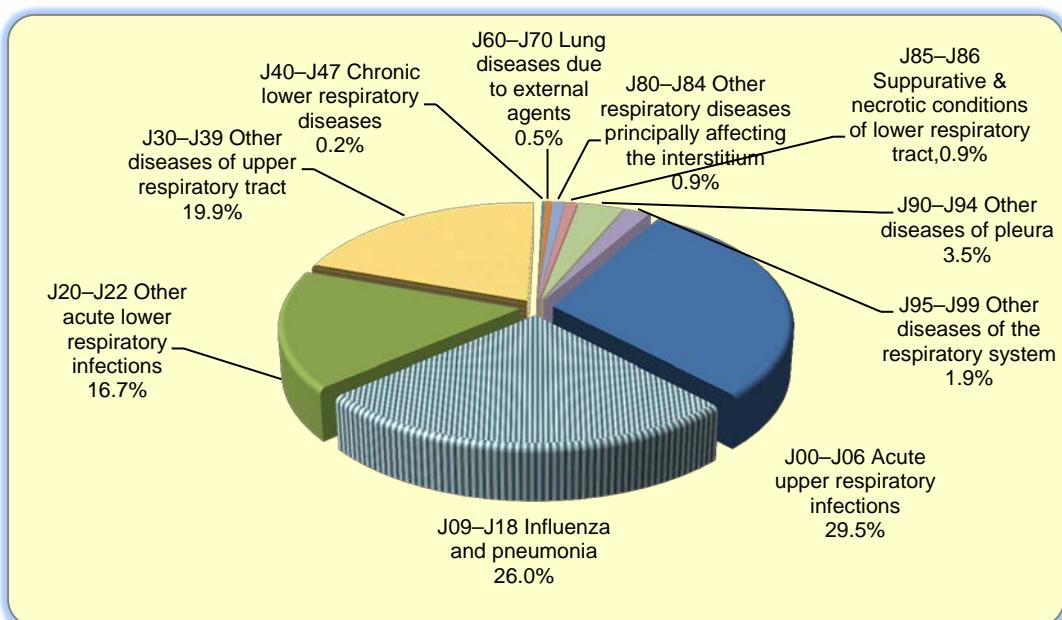

**Figure (17) Proportion of Top 10 diseases among Diseases of the Circulatory System**

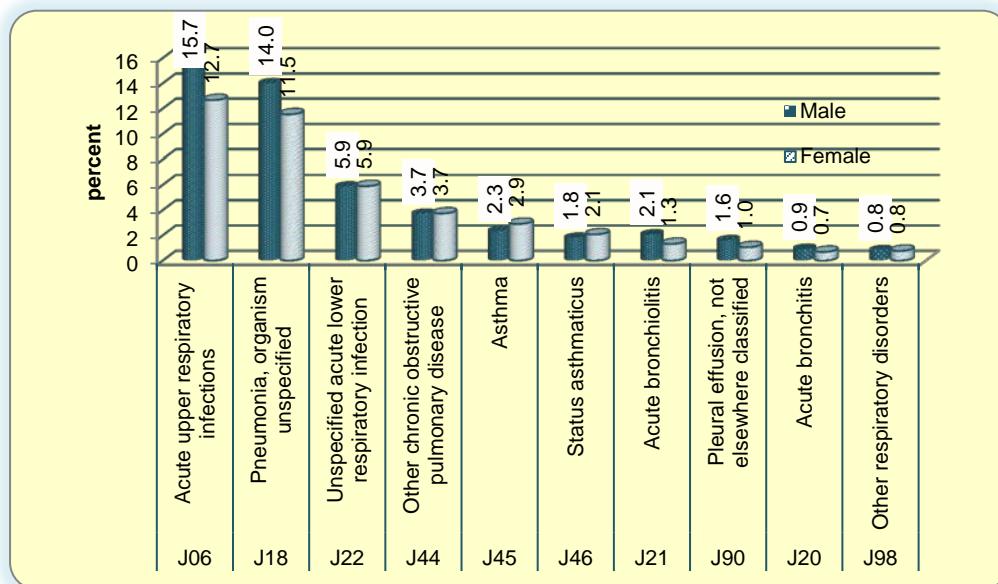

## X. Diseases of the Respiratory System(J00-J99)

**Figure (18) Percent Distribution of Diseases of the Respiratory System (J00-J99)**

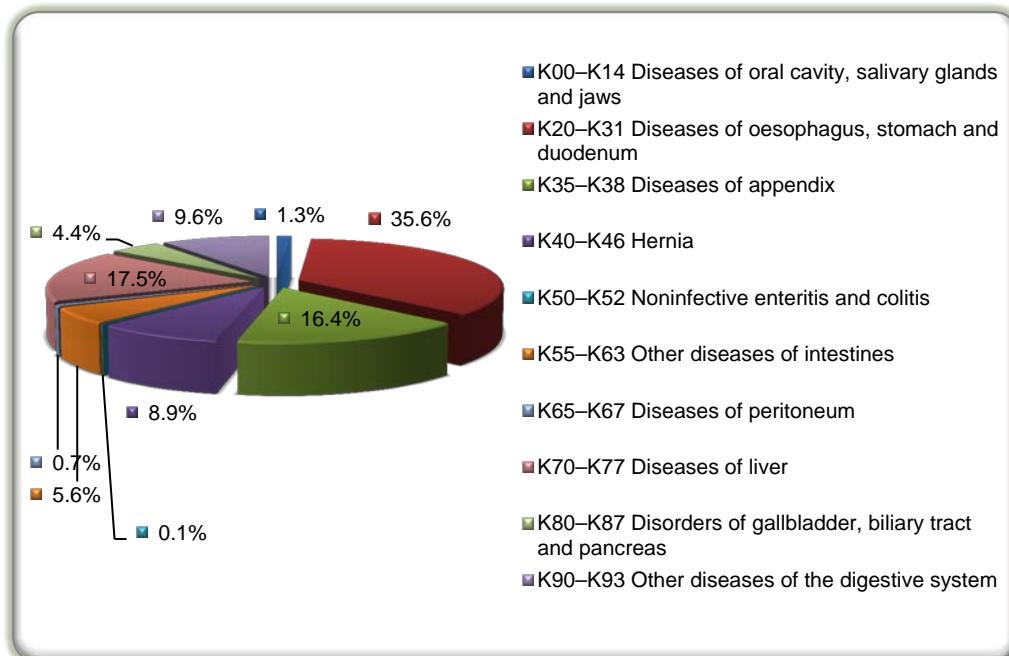

**Figure (19) Proportion of Top 10 Diseases among all Diseases of Respiratory System**

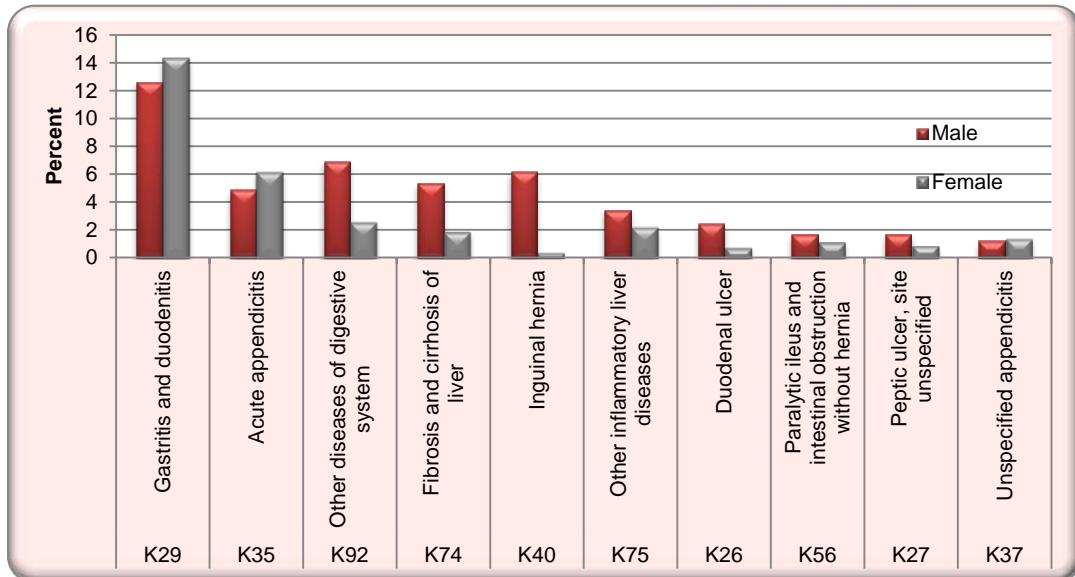

## XI. Diseases of the Digestive System (K00-K93)

**Figure (20) Percent distribution of Diseases of the Digestive System (K00- K93)**

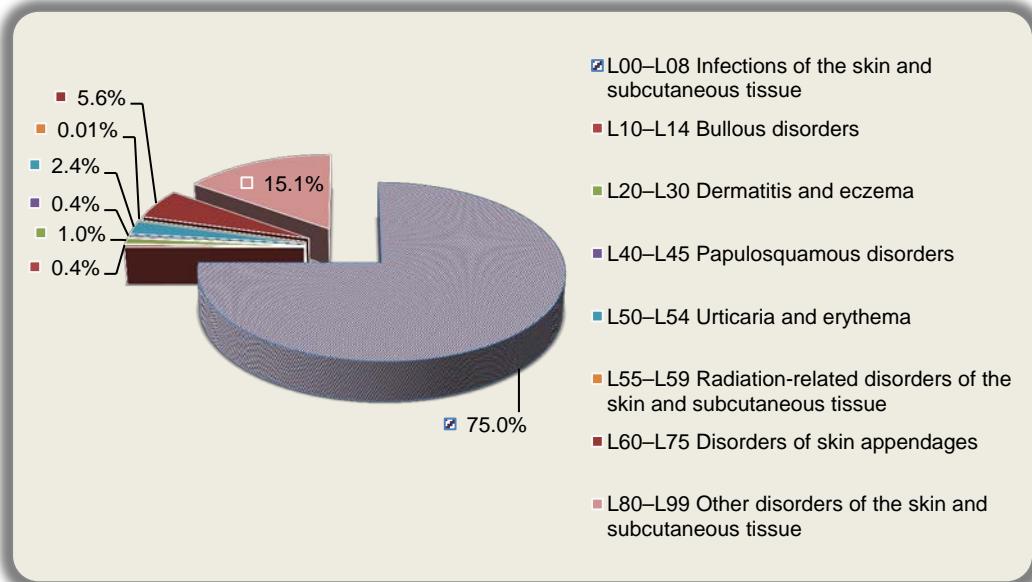

**Figure (21) Proportion of Top 10 diseases among all diseases of the Digestive System**

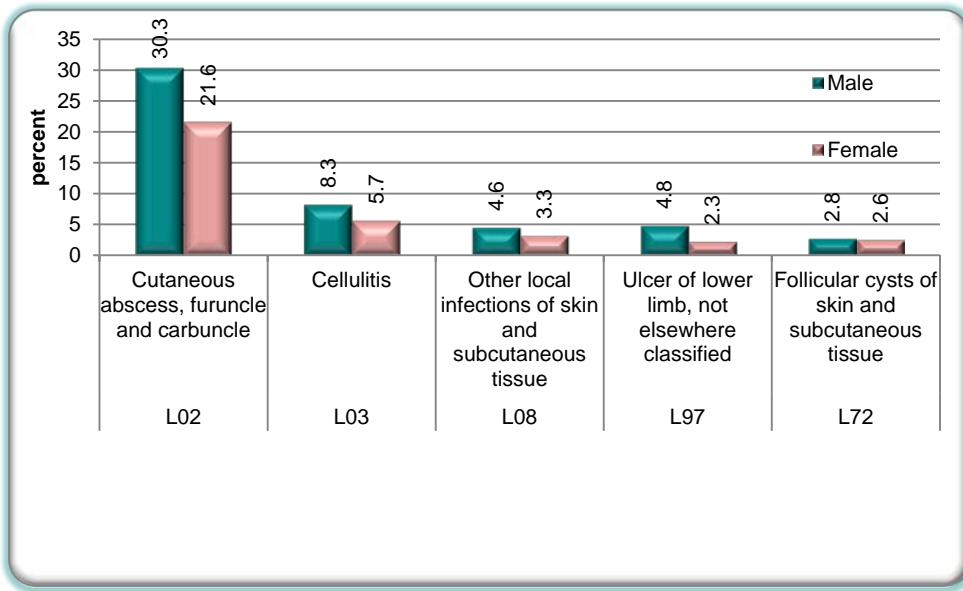

## XII. Diseases of the Skin and subcutaneous tissue (L00- L99)

**Figure (22) Percent Distribution of Diseases of the Skin and Subcutaneous tissue (L00- L99)**

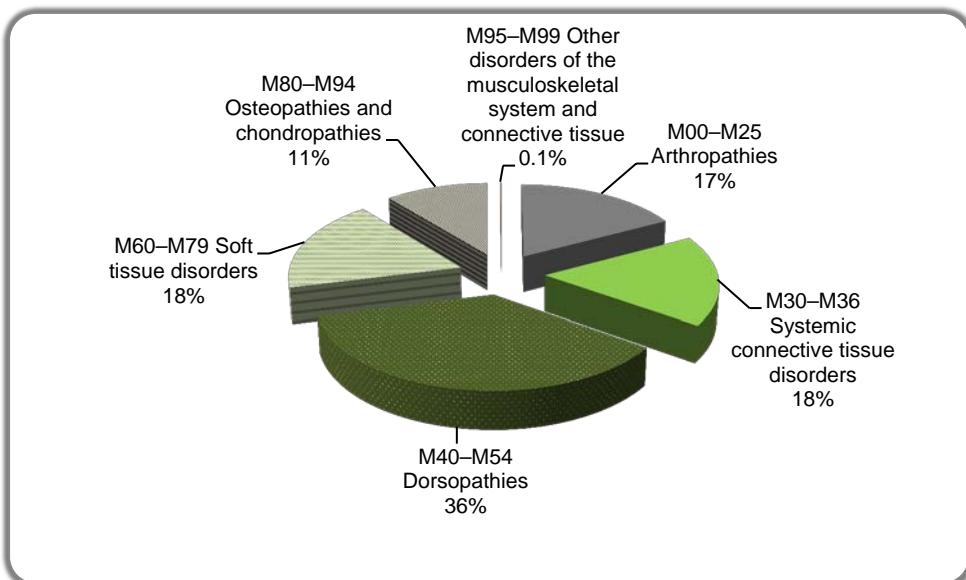

**Figure (23) Proportion of Top 5 diseases among all Diseases of the Skin and Subcutaneous tissue**

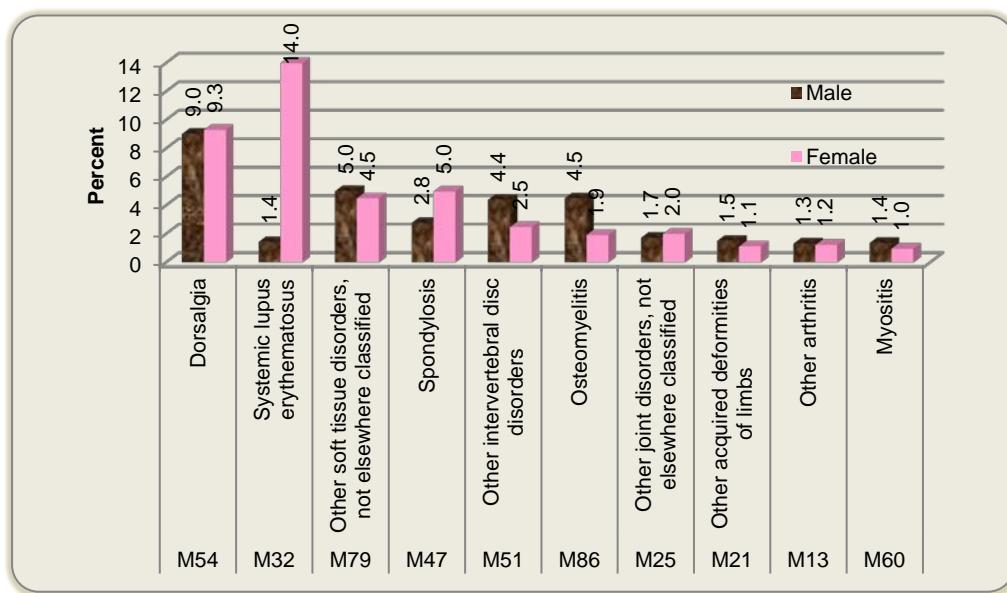

### XIII. Diseases of the Musculoskeletal System and Connective tissue (M00-M99)

**Figure (24) Percent Distribution of Diseases of the Musculoskeletal System and Connective tissue (M00-M99)**

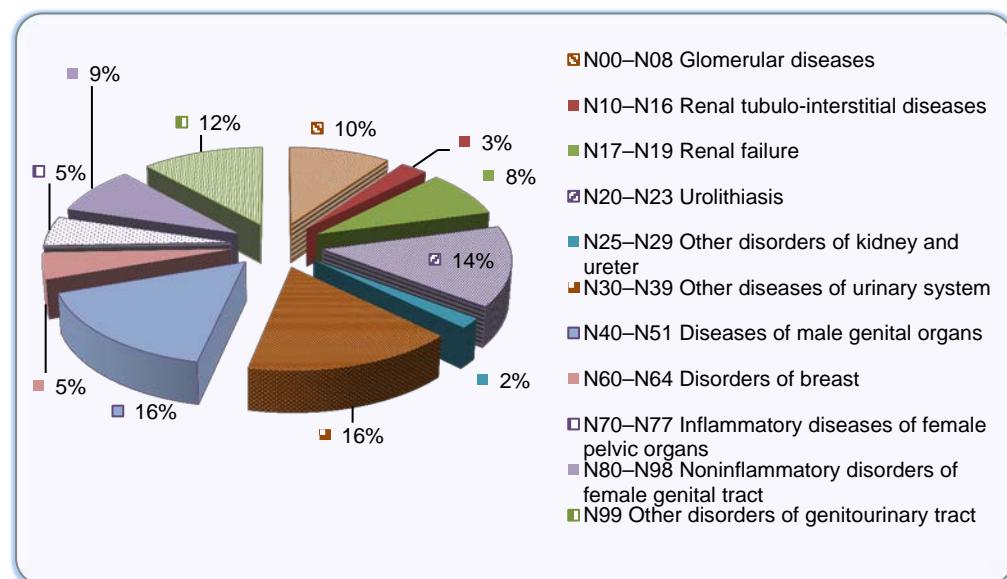

**Figure (25) Proportion of Top 10 Diseases among all Diseases of the Musculoskeletal System and Connective tissue**

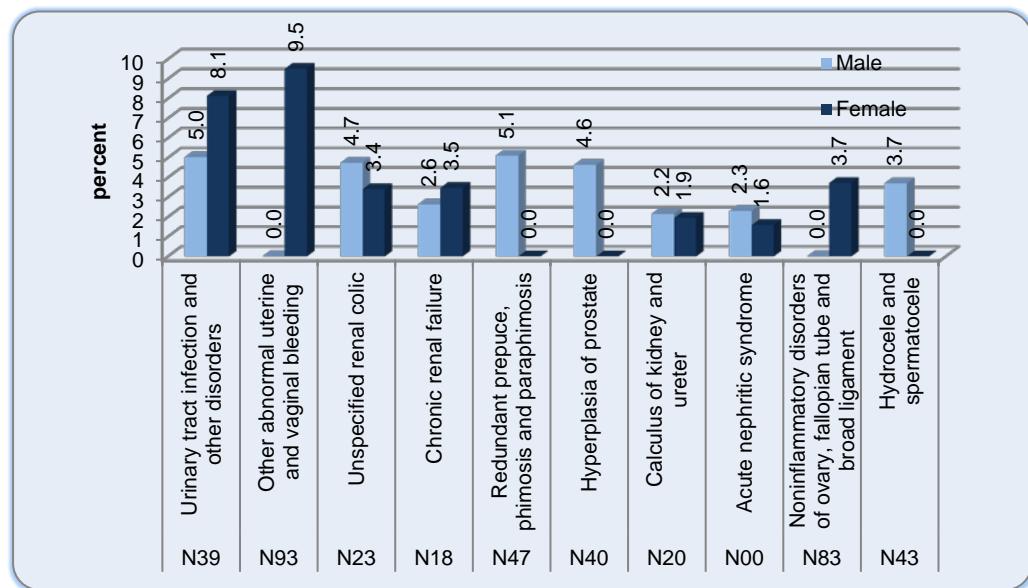

#### XIV. Diseases of the Genitourinary System (N00-N99)

**Figure (26) Percent Distribution of All Diseases of the Genitourinary System (N00-N99)**

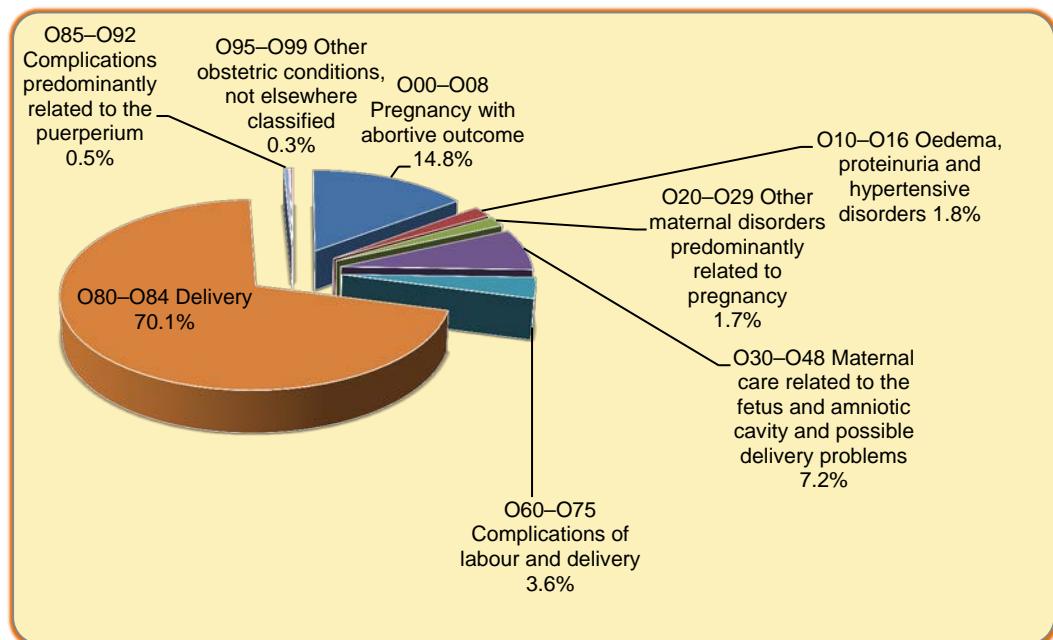

**Figure (27) Proportion of Top 10 diseases among all Diseases of Genitourinary System**

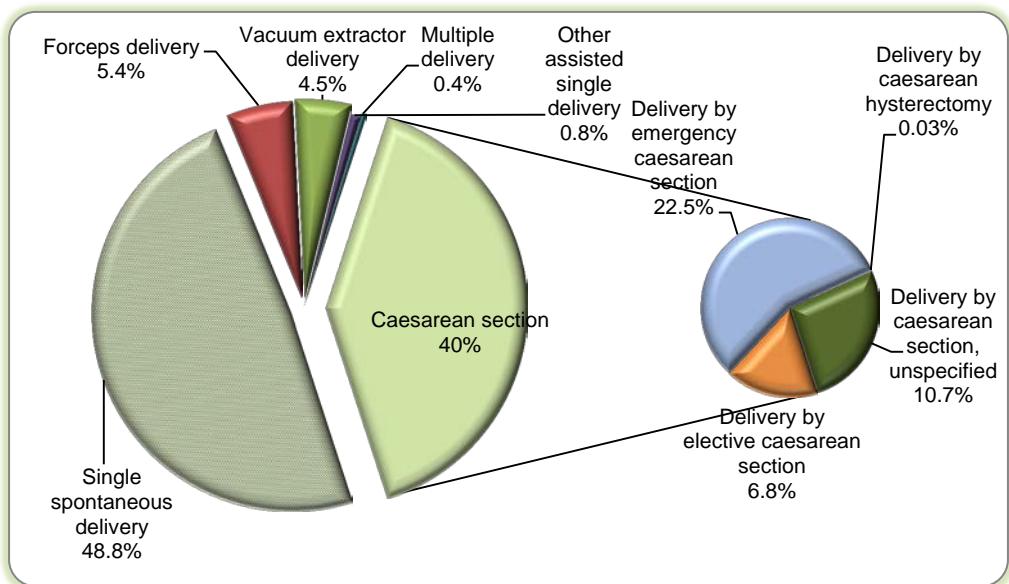

## XV. Pregnancy, Childbirth and Puerperium (O00- O99)

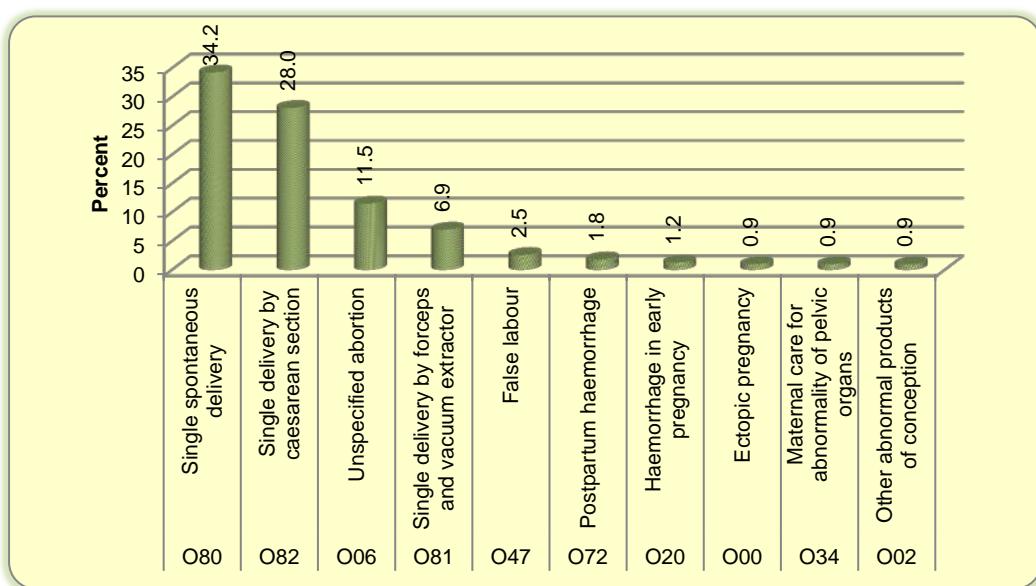

**Figure (28) Percent Distribution of all cases of Pregnancy, Childbirth and Puerperium (O00-O99)**

**Figure (29) Percent Distribution of Types of Delivery**

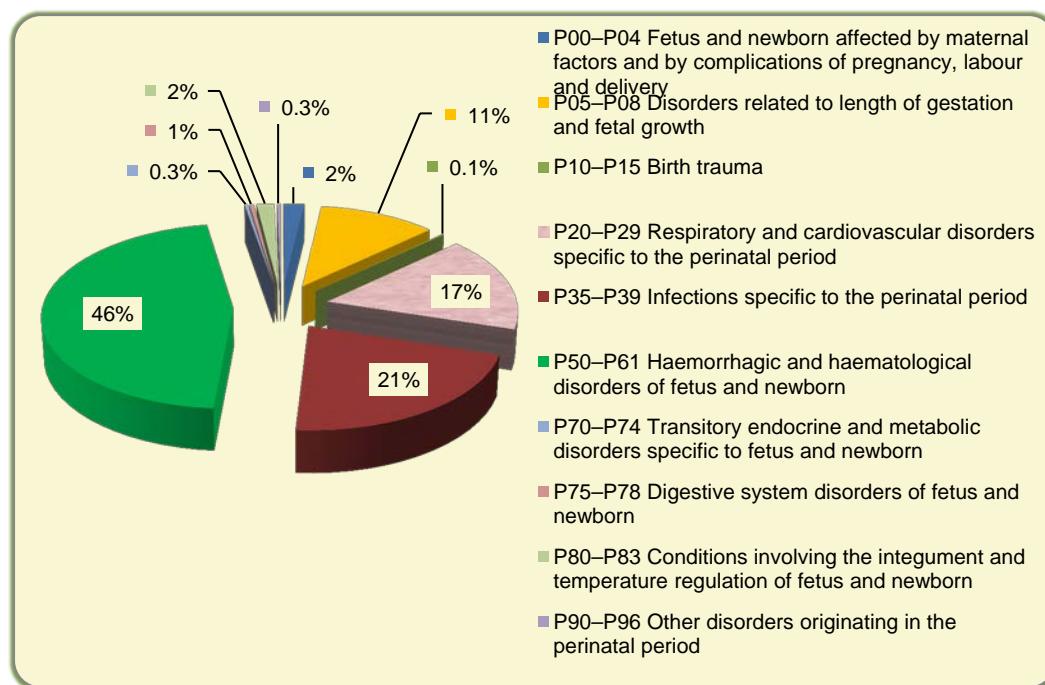

**Figure (30) Proportion of Top 10 Causes of Hospitalization among all cases of Pregnancy, Childbirth and Puerperium**

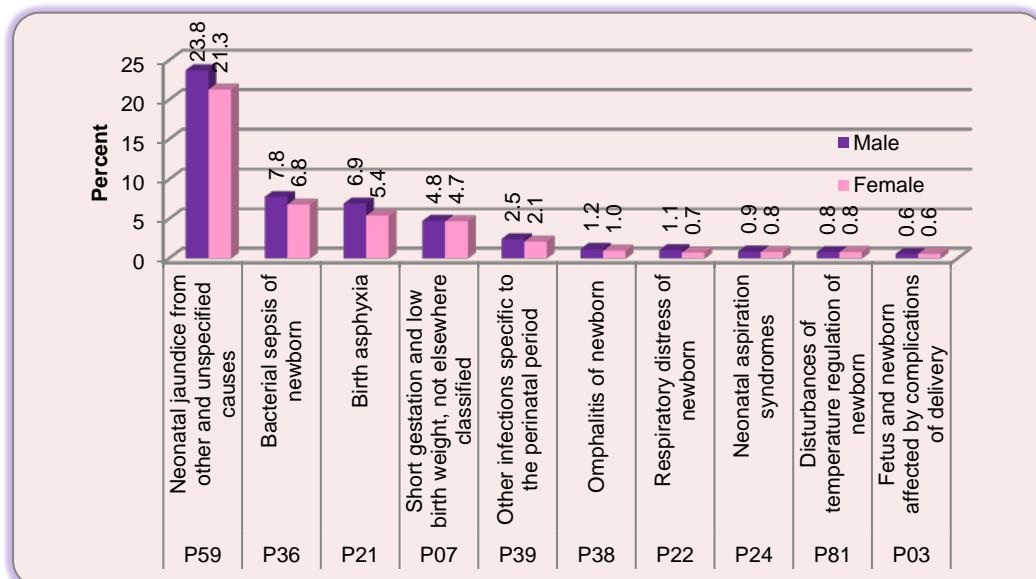

## XVI. Certain Condition originating in Perinatal Period (P00-P96)

**Figure (31) Percent Distribution of Certain condition originating in the Perinatal Period (P00-P96)**

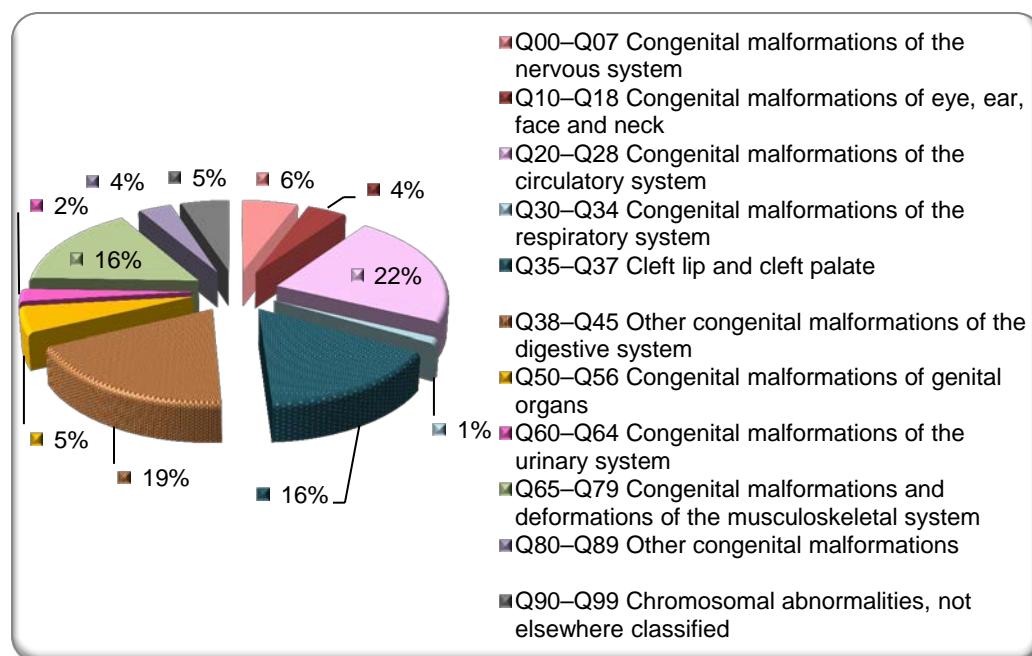

**Figure (32) Proportion of Top 10 Diseases among Certain Condition originating in Perinatal Period**

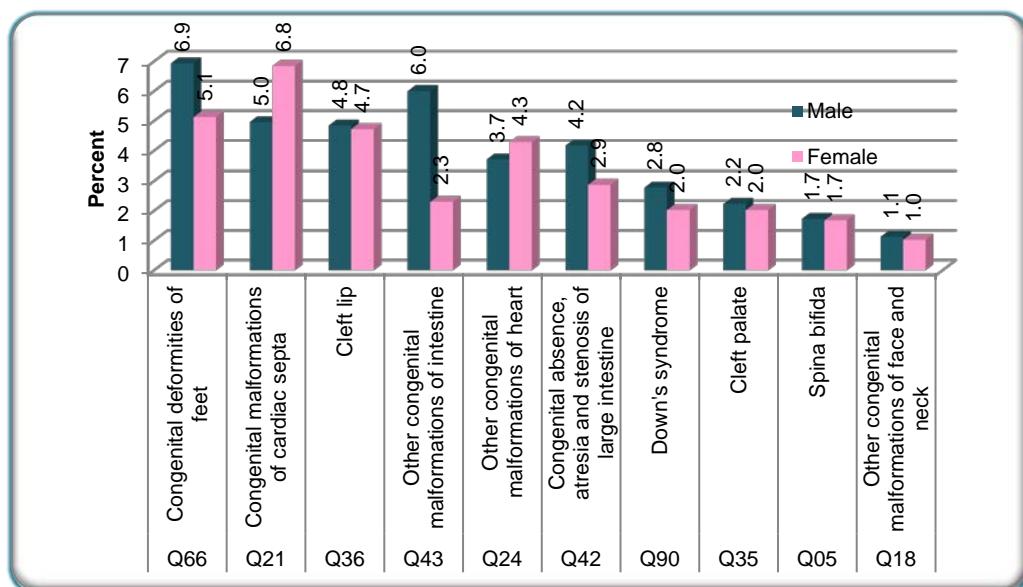

**XVII. Congenital Malformation, Deformation and Chromosomal Abnormalities (Q00-Q99)**

**Figure (33) Percent Distribution of Congenital Malformation, Deformation and Chromosomal Abnormalities (Q00-Q99)**

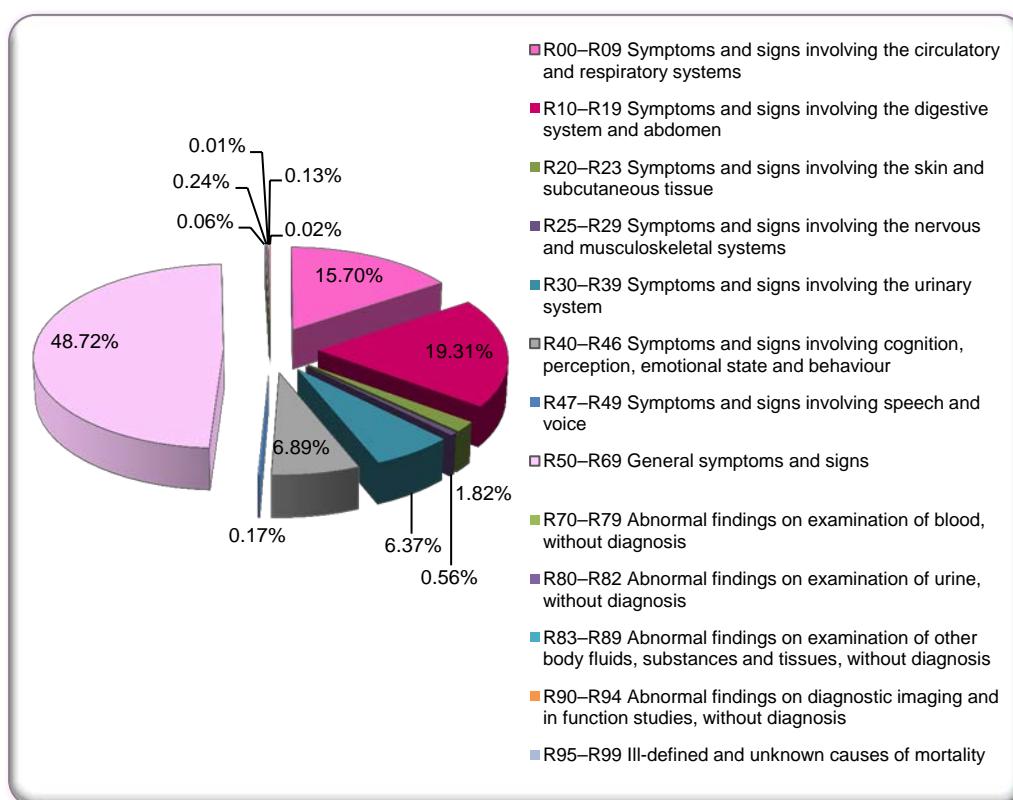

**Figure (34) Proportion of Top 10 diseases among all Congenital Malformation, Deformation and Chromosomal Abnormalities**

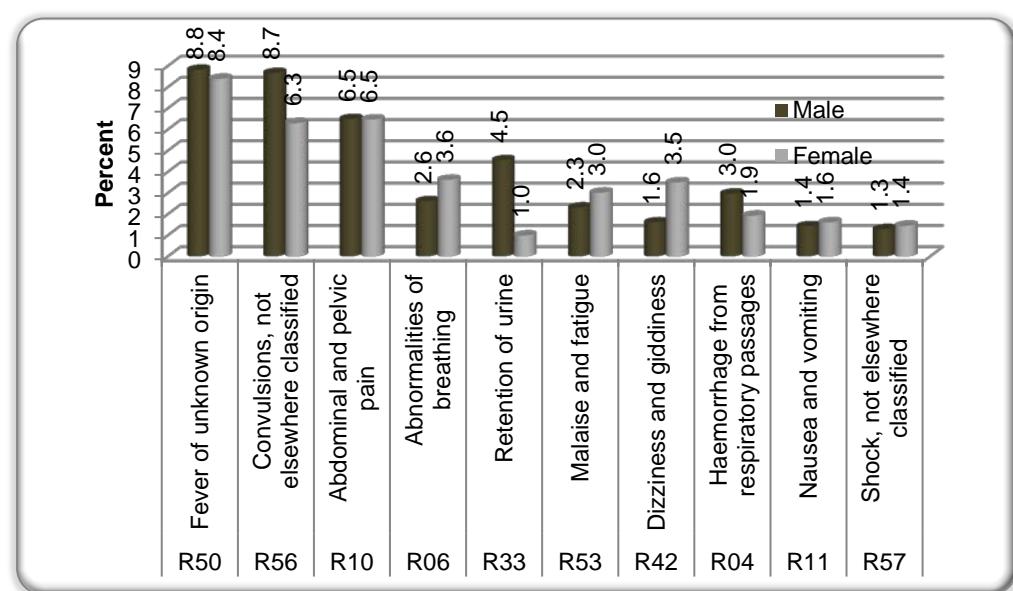

**XVIII. Symptoms, Signs and Abnormal Clinical and Laboratory Findings, not elsewhere classified (R00-R99)**

**Figure (35) Percent Distribution of Symptoms, Signs and Abnormal Clinical and Laboratory Findings, not elsewhere classified (R00-R99)**

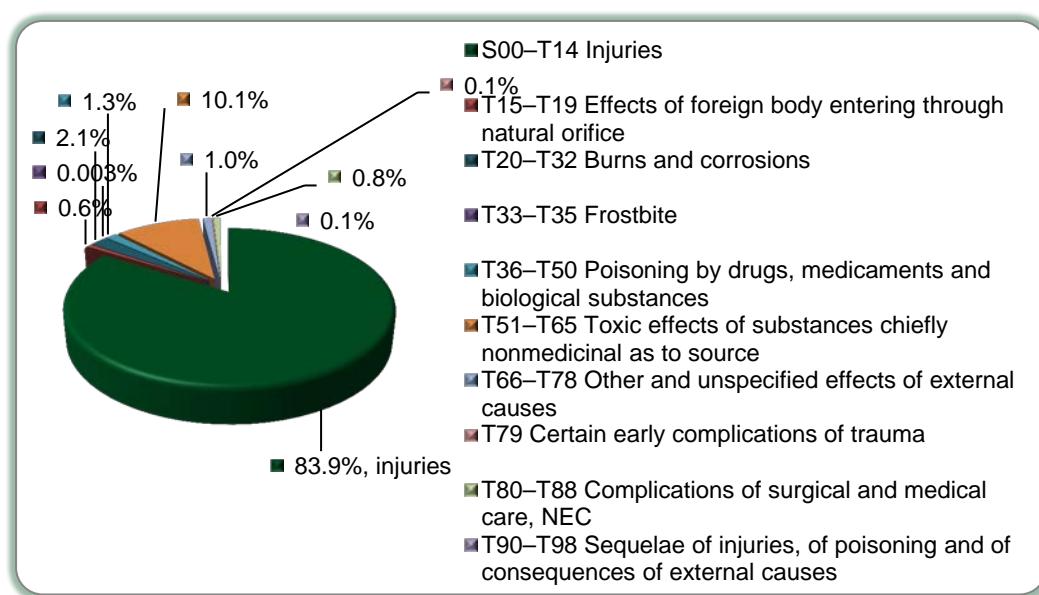

**Figure (36) Proportion of Top 10 Causes of Hospitalization among all Symptoms, Signs and Abnormal Clinical and Laboratory Findings**

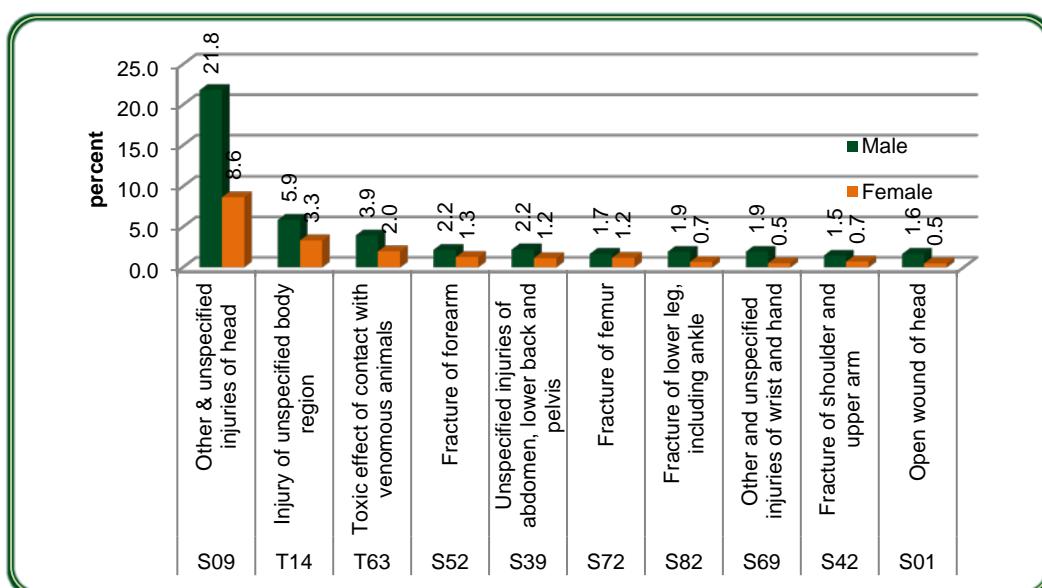

**XIX. Injury, Poisoning and Certain other consequences of external causes (S00-T98)**

**Figure (37) Percent Distribution of Injury, Poisoning and Other consequences of external causes (S00-T98)**

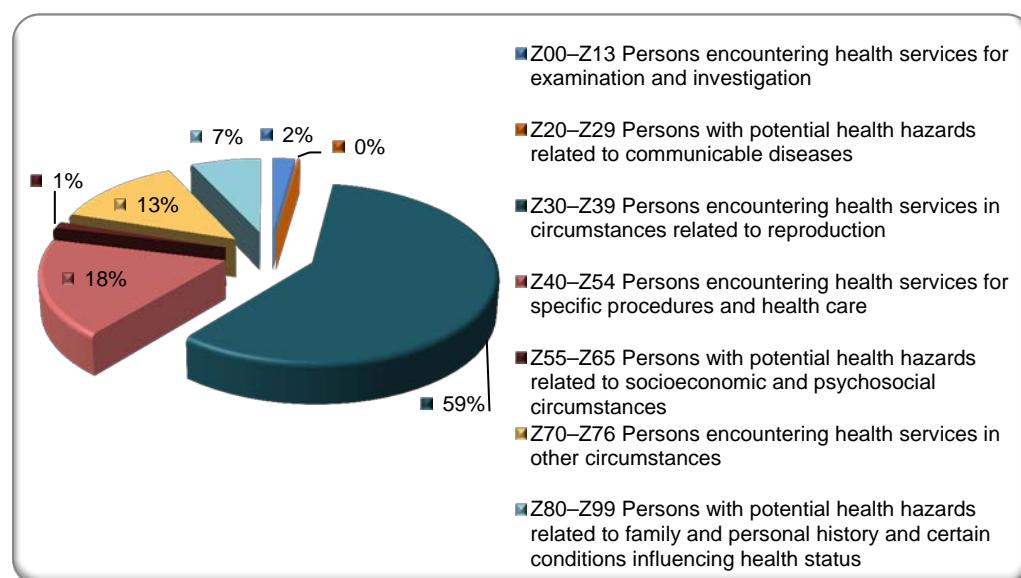

**Figure (38) Proportion of Top (10) Cases of Injuries, Poisoning and Certain other consequences of external causes (S00- T98)**

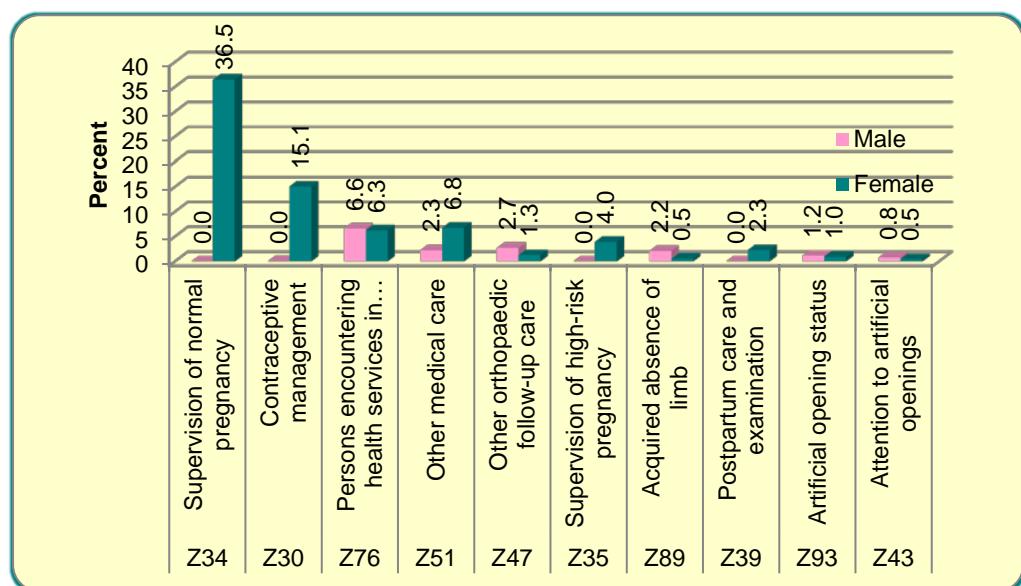

**XX. Factors influencing health status and contact with health services (Z00-Z99)**

**Figure (39) Percent Distribution of Hospitalization due to Factors influencing health Status and contact with health services (Z00-Z99)**

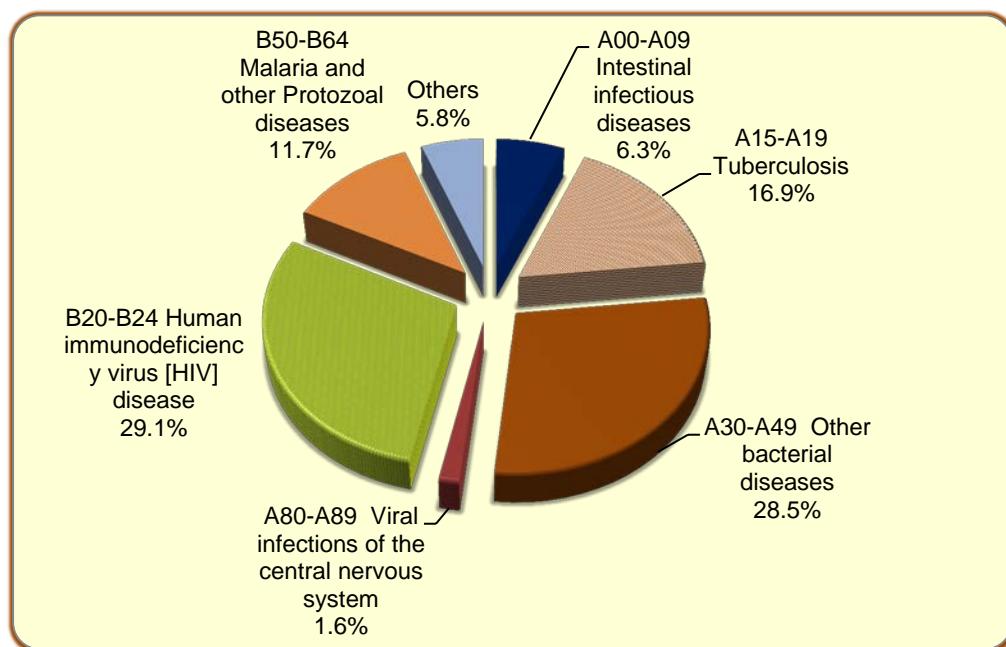

**Figure (40) Proportion of Top 10 Causes of Hospitalization due to Factors influencing health Status and contact with health services**

## GRAPHICAL PRESENTATION OF MORTALITY FINDING

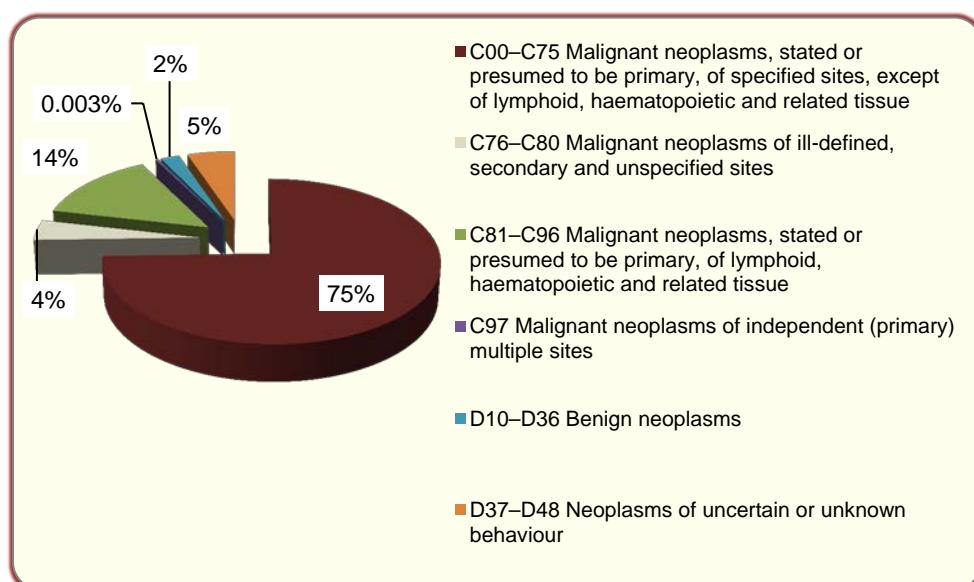

### I. Certain Infectious and Parasitic Diseases (A00-B99)

**Figure (41) Percent Distribution of all Mortality due to Certain Infectious and Parasitic Diseases**

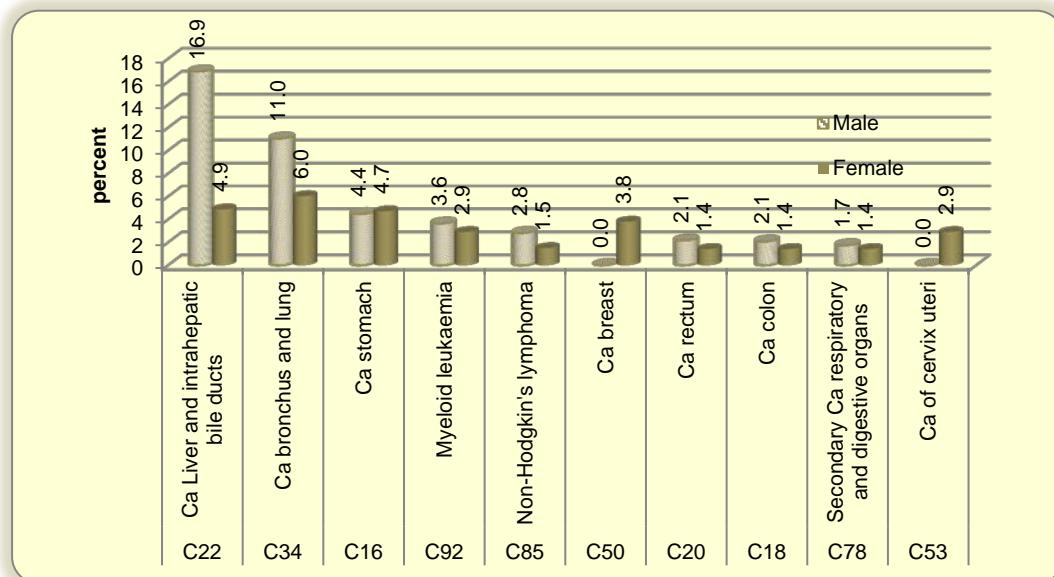

### II. Neoplasm (C00-D48)

**Figure (42) proportional mortality among all cases of Neoplasm related deaths**

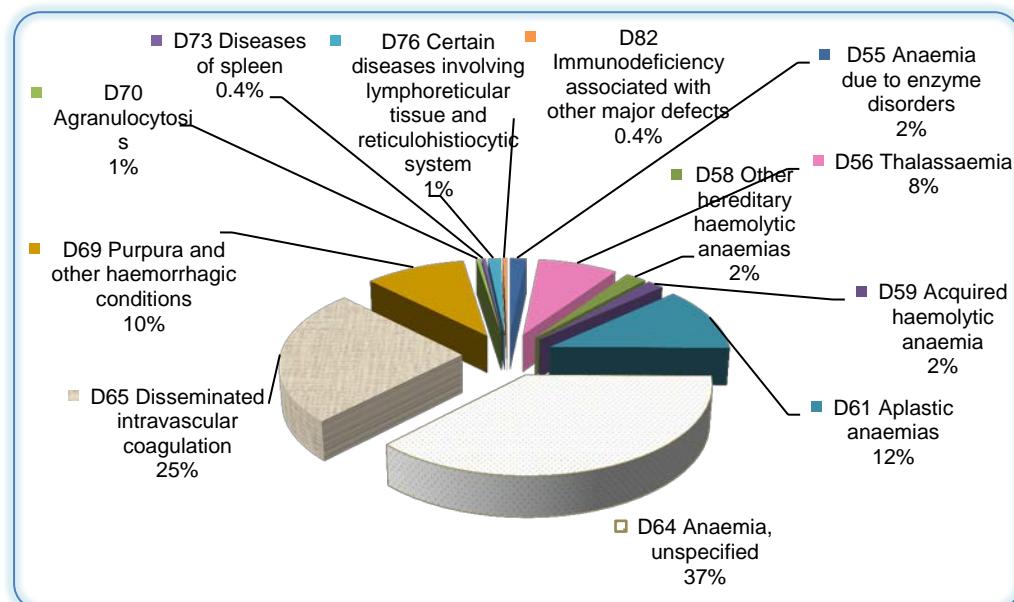

**Figure (43) Proportion of Top 10 causes among all cases of Mortality due to Malignant tumors**

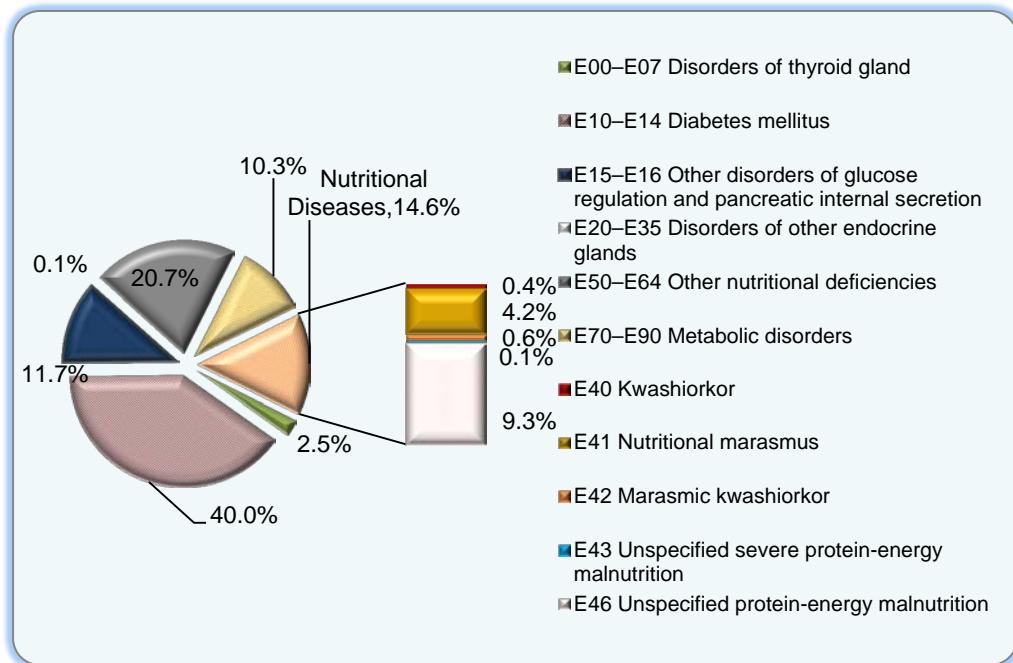

### III. Diseases of Blood and Blood-forming organs and Certain disorder involving immune mechanism (D50-D89)

**Figure (44) Proportional mortality of Diseases of Blood and Blood-forming organs and certain disorder involving immune mechanism**

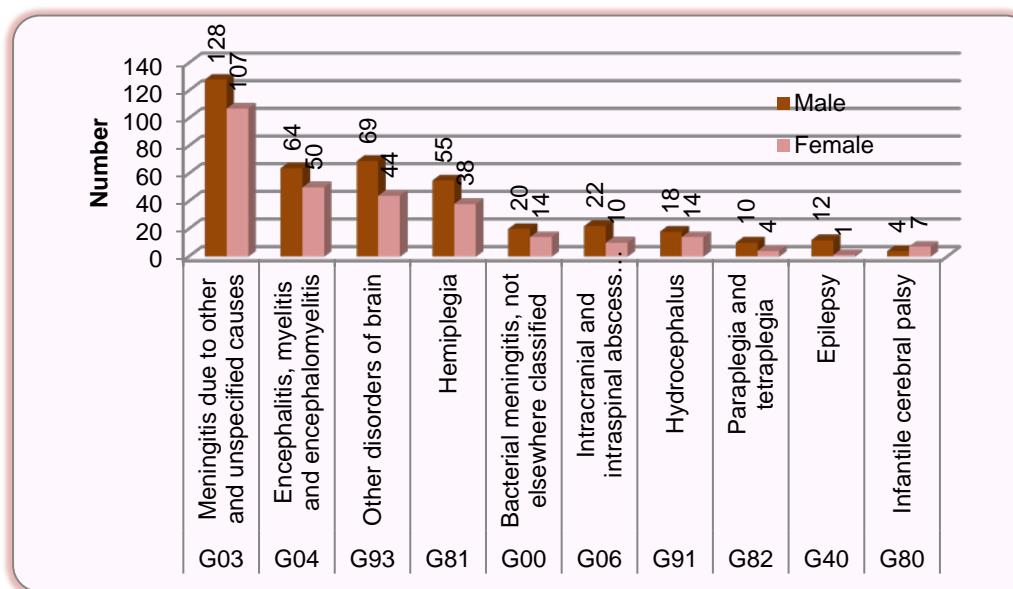

#### IV. Endocrine, Nutritional and Metabolic diseases (E00- E90)

**Figure (45) Proportional mortality among all Endocrine and Metabolic diseases**

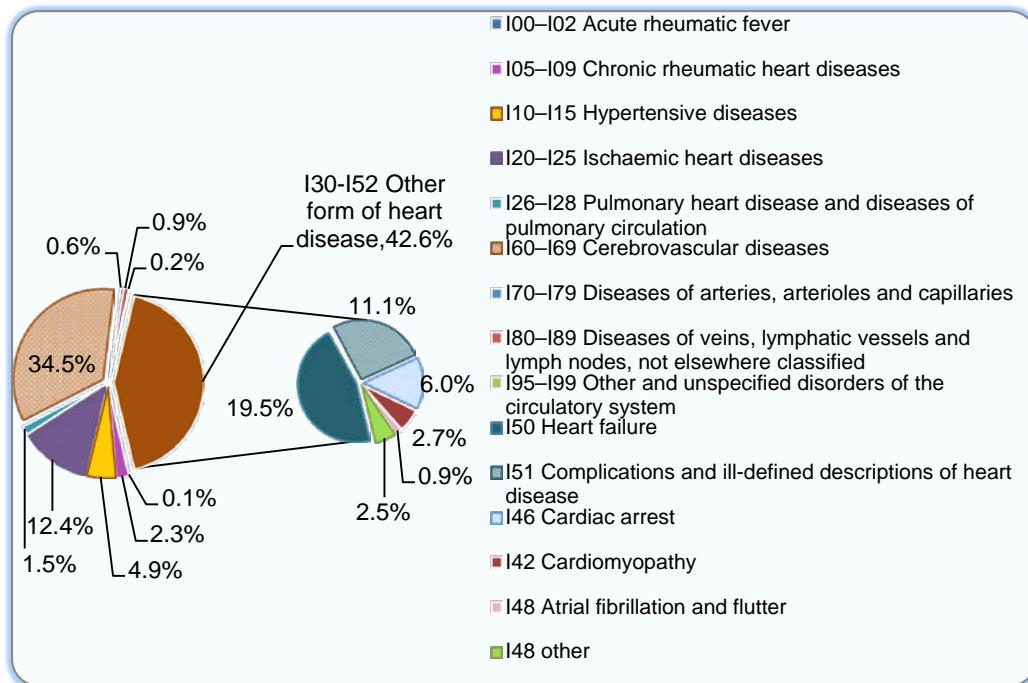

#### V. Diseases of the Nervous System (G00-G99)

**Figure (46) Leading causes of Mortality among the diseases of the Nervous System**

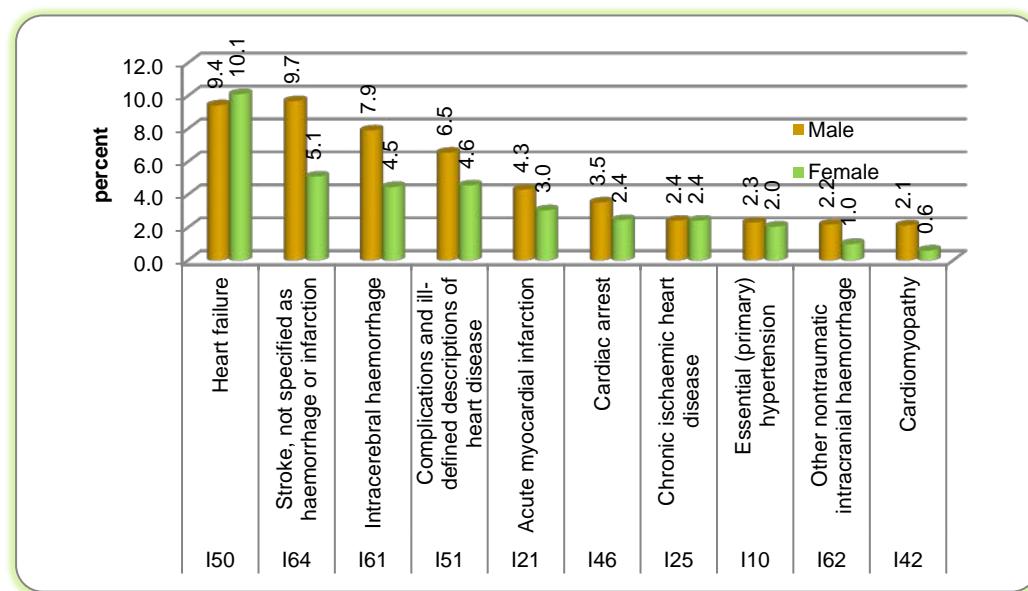

## VI. Diseases of the Circulatory System (I00-I99)

**Figure (47) Proportional mortality of Diseases of the Circulatory System**

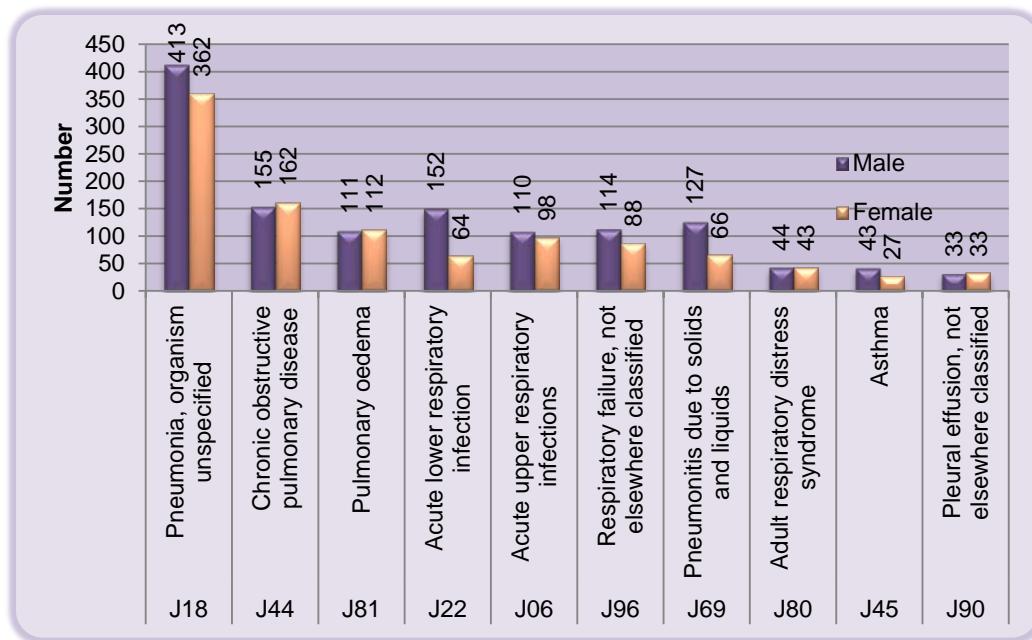

**Figure (48) Proportion of Top 10 Causes among all Mortality Cases due to Diseases of the Circulatory System**

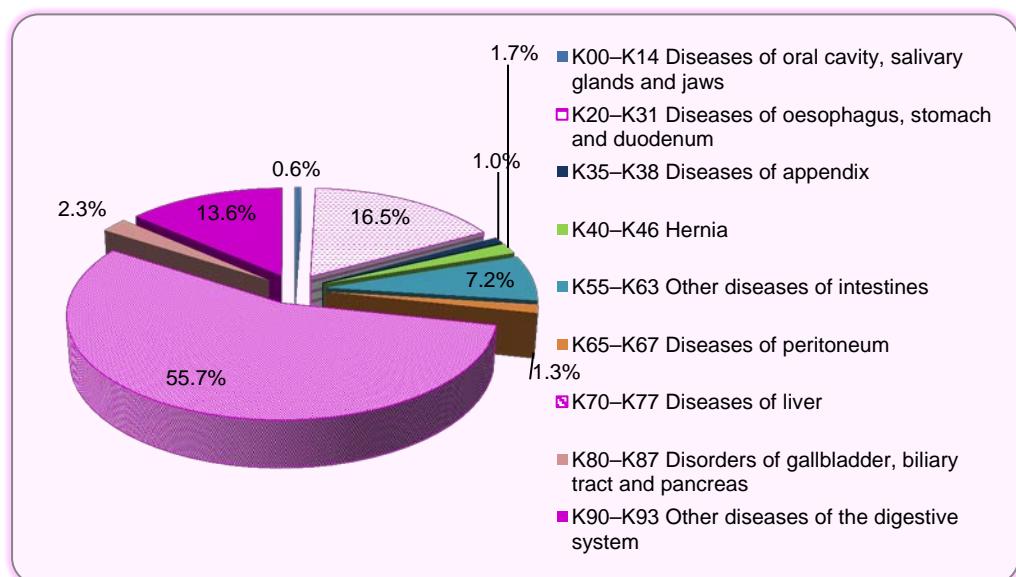

## VII. Diseases of the Respiratory System (J00-J99)

**Figure (49) Leading causes of Mortality among Diseases of Respiratory System**

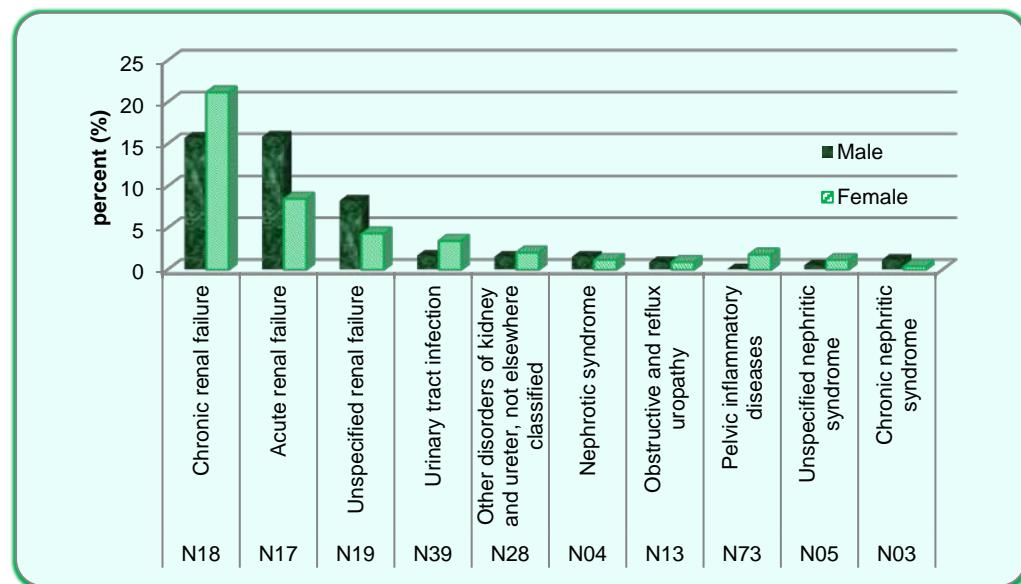

## VIII. Diseases of the Digestive System (K00-K93)

**Figure (50) Proportional mortality of Diseases of the Digestive System**

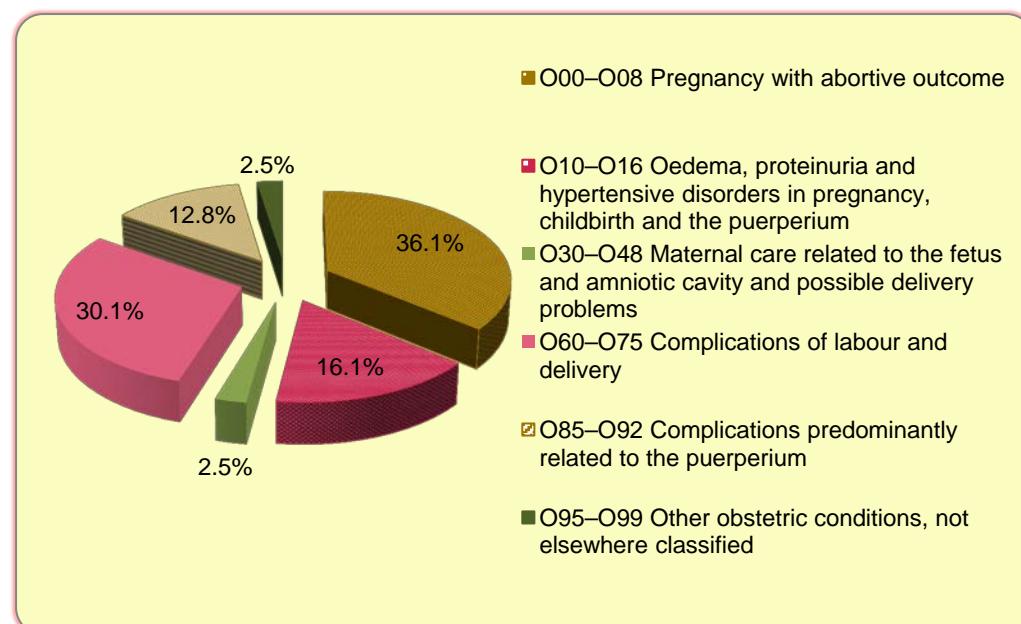

## IX. Diseases of the Genitourinary System (N00-N99)

**Figure (51) Proportion of Top 10 Mortality Cases among all Diseases of Genitourinary System (N00-N99)**

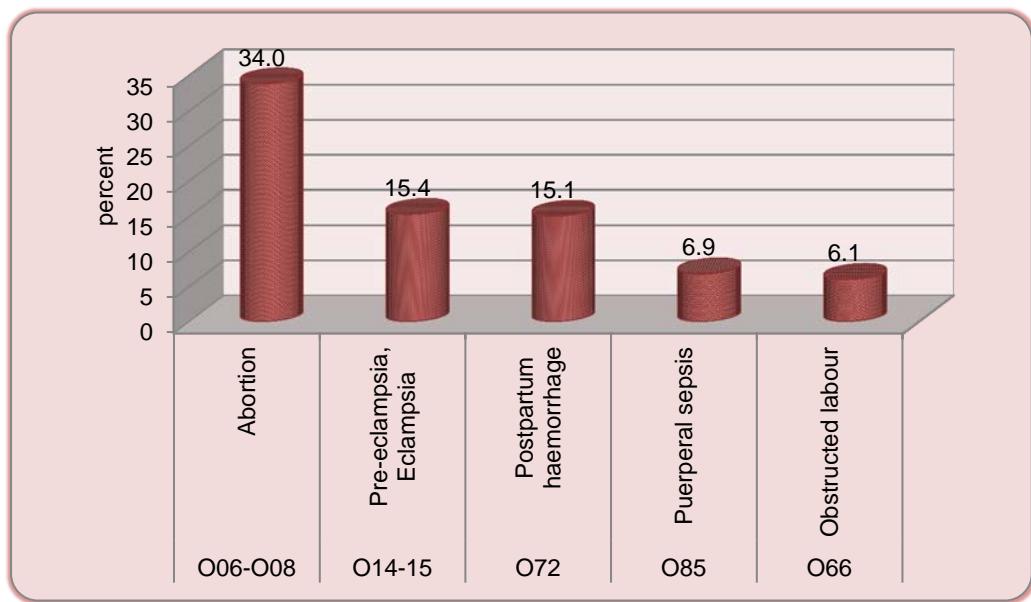

## X. Pregnancy, Childbirth and Puerperium (O00-O99)

**Figure (52) Proportional mortality of All cases of Pregnancy, Childbirth and Puerperium (O00-O99)**

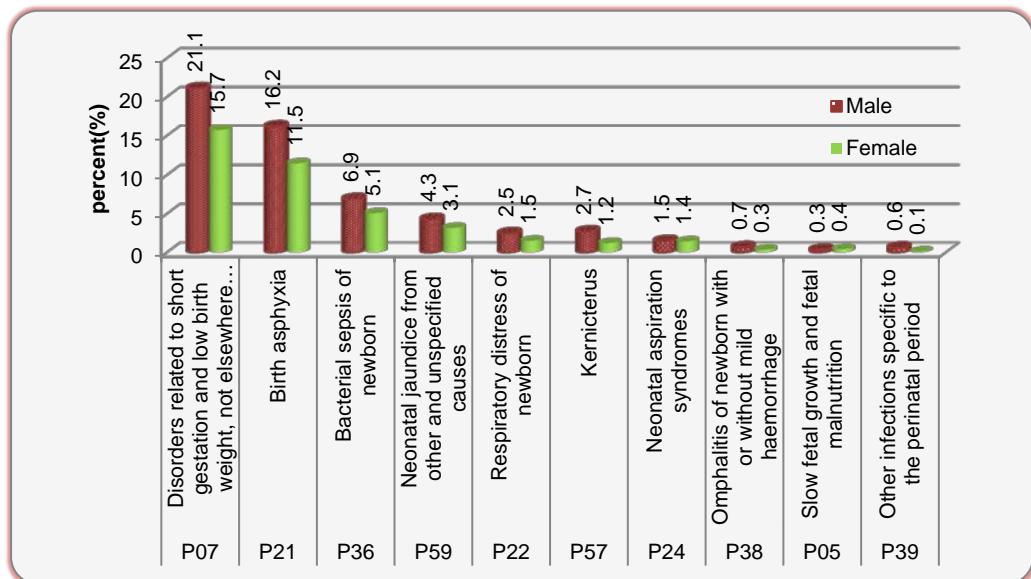

**Figure (53) Proportion of Top 5 causes among Obstetric Causes of Death**

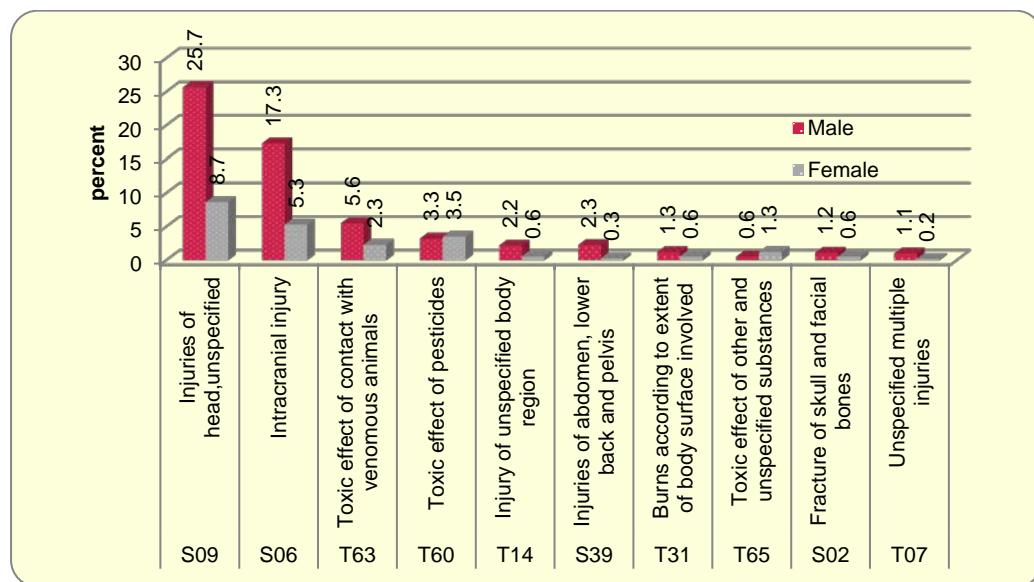

## XI. Certain Conditions originating in Perinatal Period (P00-P96)

**Figure (54) Proportion of Top 10 Mortality cases among Certain Conditions originating in Perinatal Period**

**XII. Injuries, Poisoning and certain other consequences of external causes (S00-T98)**

**Hospital Administrative Indicators**

## Hospital Administrative Indicators

1. Average number of out-patients per day

$$= \frac{\text{Total number of outpatient attendances}}{\text{Number of working days in year}}$$

2. Average number of Inpatients per day

$$= \frac{\text{Total number of patient days}}{365 (\text{Number of days in year})}$$

3. Average duration of stay (in days)

$$= \frac{\text{Total number of patient days}}{\text{Number of discharges & deaths}}$$

4. Percentage of occupancy based on available beds

$$= \frac{\text{Average number of inpatients per day} \times 100}{\text{Number of available beds}}$$

5. Percentage of occupancy based on sanctioned beds

$$= \frac{\text{Average number of inpatients per day} \times 100}{\text{Number of sanctioned beds}}$$

6. Average turnover of patients per bed per year

$$= \frac{\text{Number of discharges & deaths}}{\text{Number of available beds}}$$

7. Average turnover interval [in days]

$$= \frac{[(\text{Available beds} \times 365) - \text{patient days}]}{\text{Number of discharges & deaths}}$$

8. Hospital Death Rate

$$= \frac{\text{Number of deaths} \times 100}{\text{Number of discharges & deaths}}$$

## **ANNEX 4**

**Description of Chapters of ICD-10**

## Description of Chapters of ICD-10

- Chapter I Certain infectious and parasitic diseases (A00- B99)
- Chapter II Neoplasms (C00-D48)
- Chapter III Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism (D50-D89)
- Chapter IV Endocrine, nutritional and metabolic diseases (E00-E90)
- Chapter V Mental and behavioural disorders (F00-F99)
- Chapter VI Diseases of the nervous system (G00-G99)
- Chapter VII Diseases of the eye and adnexa (H00-H59)
- Chapter VIII Diseases of the ear and mastoid process (H60-H95)
- Chapter IX Diseases of the circulatory system (I00- I99)
- Chapter X Diseases of the respiratory system (J00-J99)
- Chapter XI Diseases of the digestive system (K00-K93)
- Chapter XII Diseases of the skin and subcutaneous tissue (L00-L99)
- Chapter XIII Diseases of the musculoskeletal system and connective tissue (M00-M99)
- Chapter XIV Diseases of the genitourinary system (N00-N99)
- Chapter XV Pregnancy, childbirth and the puerperium (O00-O99)
- Chapter XVI Certain conditions originating in the perinatal period (P00-P96)
- Chapter XVII Congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)
- Chapter XVIII Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R99)
- Chapter XIX Injury, poisoning and certain other consequences of external causes (S00-T98)
- Chapter XX External causes of morbidity and mortality (V01-Y98)
- Chapter XXI Factors influencing health status and contact with health services (Z00-Z99)
- Chapter XXII Codes for special purposes
