Nay Pyi Taw, Myanmar

PREFACE

Timely, accurate, consistent and reliable health information is crucial for policy making, planning, implementation, monitoring and evaluation of all health programmes. Among subsystems included in the health information system; epidemiological surveillance system, service reporting system, vital events and census, administrative system such as human resource information, logistics information, financial information and research, Department of Health Planning takes the responsibility of compiling and reporting, mainly the service reporting system.

This is annual report of hospital information based on data from public hospitals. The critical gap is the information obtained from private sector which is rapidly growing in health sector. Making efforts to collect data from private sector is very important to get complete picture of health information system in Myanmar.

This hospital report includes reporting status, availability and utilization of services including average number of out-patients per day, average number of in-patients per day, bed occupancy rate based on sanctioned bed and available bed, average turnover interval, hospital death rate for administrative purposes. Moreover, International statistical classification of diseases and related health problems version 10 (ICD-10) is used for systematic recording, analysis, interpretation and comparison of morbidity and mortality data.

Health care information is derived from both primary and secondary data source. In public hospitals, hospital staff produces monthly hospital return for administrative purpose, monthly general in-patient summary and hospital daily record (in-patient). These hospital reports form I, II and III have to be completed and posted not later than the 7th day of each month. New advanced technology should be used for data transmission process in order to promote data quality and timeliness.

This hospital report is the product of efforts by medical superintendents and health staff who are working at public hospitals as well as region/state health directors and staff from central to generate 2010 and 2011 simultaneously in one report. Without their collaboration, this publication would not have been made possible.

Hospital annual report (2010-2011) will be useful for planning and administrative purposes because it can reflect some extent in current situation of diseases and related health problems, availability and utilization of hospital services. We welcome and appreciate any comments, suggestion and advice for further improvement of health information.

Summary

The report covered the annual statistics of public hospitals in Myanmar for 2010 and 2011. Nil reporting was found in 8.8 % of public hospitals in 2010 and 10.3 % of those in 2011. Full response rates were found in 80.2 % and 78.9 % of public hospitals in 2010 and 2011 respectively. Hospital response rate showed slightly decreasing trend, 88.4 % in 2010 and 86.9 % in 2011. Kayin State had 100 % reporting in 2010 and 89.6 % in 2011. In 2011, highest reporting status was found in Chin State and Lowest in Shan (north).

Number of hospitals increased as 898 in 2010 and 924 in 2011 with the increasing number of sanctioned beds and available beds. For ten years duration, the sanction beds considerably increased while as the available beds increased gradually. Among them, the highest in the sanction beds (41,804) was found in 2011 and the highest available beds (45,904) in 2010.

Seventy-six and seventy-four beds were available for hundred thousand populations in 2010 and 2011 reporting while (68) beds were sanctioned for this population in these years. In the reporting period, total number of patients admitted to public hospitals was over thirteen hundred thousand (1,339,642 in 2010 and 1,324,979 in 2011) and total number of out-patient attendance was over thirty-six hundred thousand (3,627,113 in 2010 and 3,659,822 in 2011).

The average number of in-patients per day and out-patients per day showed also increasing trend in each and every year. In 2010 and 2011, more than twenty-one thousand people (22,047 in 2010 and 21,485 in 2011) per day were admitted to public hospitals and round about fifteen thousand people (14,989 in 2010 and 15,122 in 2011) per day attended at out-patient clinics of public hospitals.

The highest available beds per 100,000 population was found in Kayar and Chin State in two consecutive years. However, among the regions and states, Kayar and Chin were found to have the lowest bed occupancy rates based on sanctioned bed. Highest bed occupancy rate based on sanctioned bed was found in Bago (West) Region and Mon State alternately in 2010 and 2011.

The daily use of hospital beds per 100,000 population was highest in Yangon Region (89.4 in 2010 and 83.8 in 2011), and lowest in Rakhine State (16.6 in 2010 and 17.4 in 2011). The highest rate for both of the admission per 1000 population and the out-patient attendances per 1000 population were found in Yangon Region and Kayar State in two successive years.

Regarding the types of hospitals, the maximum average number of out-patients per day was found in general hospitals, 4825 people in 2010 and 4968 in 2011 attended as outpatients every day. And the next highest was in station hospitals, 3870 and 3622 out-patients per day in 2010 and 2011 respectively. Regarding average number of in-patients per day, the uppermost was found in general hospitals followed by station hospitals in two consecutive years.

In 2010 and 2011, there were (71) and (70) hospitals respectively; in which bed occupancy rate based on sanctioned bed was more than 80 %. Out of those, equal or more than 100% of bed occupancy rate based on sanctioned bed was found in one specialist hospital, six general hospitals, one (100) bedded hospital, six (50) bedded hospitals and twenty five (25) bedded hospitals in 2010. Similar data was found in one specialist hospital, six general hospitals, six (50) bedded hospitals and twenty five (25) bedded hospitals in 2011. Though the data were nearly the same, the amount of bed occupancy rate and ranks of the hospitals varied from year to year.

Surgical operation was performed in all public hospitals. The number of operation dramatically increased from 2009 to 2011 expect 16 bedded hospitals. Most of surgical operations were performed in general hospitals with specialist services and lowest in 16 bedded hospitals. Spinal anaesthesia was the commonest method used in surgical operations.

Total deliveries in public hospitals were 165834 in 2010 and 178372 in 2011. Overall trend of live births as percentage of deliveries was in good shape; 96 % and 96.6% in 2010 and 2011 respectively. Abortion rate among hospital admitted cases were 17.6% in 2010 and 17.4% in 2011. Abortion cases were highest in station hospitals; 22.7% in 2010 and 21.6% in 2011. The highest of those cases were found in Chin and Rakhine States not only in 2010 but also in 2011. Abortion rate in Chin State was 31.3% and 29.6 % for these years while those of Rakhine State were 29.3% and 26.1 % respectively.

Total discharges and deaths were 1311845 in 2010 and 1322053 in 2011. Hospital deaths were 29703 and 28324 in 2010 and 2011 respectively. . In 2010, first leading cause of morbidity was infectious and parasitic diseases (20.4 %) followed by pregnancy, childbirth and puerperium (18 %) and third leading was injury, poisoning and certain other consequences of external causes (14.9%). Pregnancy, child birth and puerperium was highest among all cases (17.9%) first leading causes of morbidity, second leading was infectious and parasitic diseases (16.7%) and third leading was injury, poisoning and certain other consequences of external

causes (16.5 %) in 2011. Infectious and parasitic diseases was decreasing trend within five years.

Leading pattern of mortality was similar in both 2010 and 2011. First leading cause of mortality was certain infectious and parasitic diseases followed by diseases of circulatory system. Third leading mortality was injury, poisoning and certain other consequences of external causes and fourth one was certain conditions originating in the perinatal period.

Non-communicable diseases were estimated to account for 34% and 37 % of all morbidity in 2010 and 2011 respectively. Injury contributed for 16% in both years and the communicable diseases, maternal, perinatal and nutritional conditions contributed for 50% and 47% of hospital discharges in those years.

Regarding hospital mortality, the contribution of non-communicable diseases was 42 % in 2010 and 45 % of all inpatient deaths in 2011. Among non-communicable diseases, most of the hospital discharges and deaths were due to the cardiovascular diseases, cancer and respiratory diseases.

Neonatal mortality rate, infant mortality rate, under five mortality rate and maternal mortality ratio in hospital in-patients decreased in 2011 compared with 2010: neonatal mortality rate 22.4 in 2010 and 20.13 per 1000 livebirths in 2011, infant mortality rate 31.09 and 28.24 per 1000 livebirths in 2010 and 2011 accordingly, under five mortality rate 38.51 in 2010 to 34.97 per 1000 livebirths in 2011and maternal mortality ratio were 354 and 228 per 100,000 livebirths in 2010 and 2011 respectively.

Other pregnancy with abortive outcomes contributed more than 30% of maternal death in hospital: 31.44% and 38.01% in 2010 and 2011 respectively. Maternal deaths due to postpartum haemorrhage were 7.1% in 2010 and 14.54 % in 2011. Oedema, proteinuria and hypertensive disorders in pregnancy, delivery and puerperium was cause for 14.03 % and 7.65 % of maternal death in public hospitals and these figures illustrated the interventions required for prevention of maternal deaths.

Slow fetal growth, fetal malnutrition and disorders related to short gestation and low birth weight was first leading cause of mortality in under five years of age: 16.9 % in 2010 and 17.54 % in 2011. Second leading cause of under five mortality rate was intrauterine hypoxia and birth asphyxia (15.3% and 13.83% of under five deaths in 2010 and 2011). Third to six leading causes had indicated a little change in 2010 and 2011and these were pneumonia, other conditions originating in the perinatal period, septicemia and congenital infectious and parasitic diseases.

On reviewing the data submitted from various out-patient departments for one day attendants in summer, rainy and winter season, more female patients attended than the male on that day. Antenatal screening and other supervision of pregnancy, other symptoms, signs and abnormal clinical and laboratory findings, fever of unknown origin, malaria, essential hypertension, injuries and diseases of respiratory system were found as the top five leading causes of out-patient morbidity alternately.

SECTION I

HOSPITAL ADMINISTRATIVE STATISTICS

Response Rate of Hospital Statistics

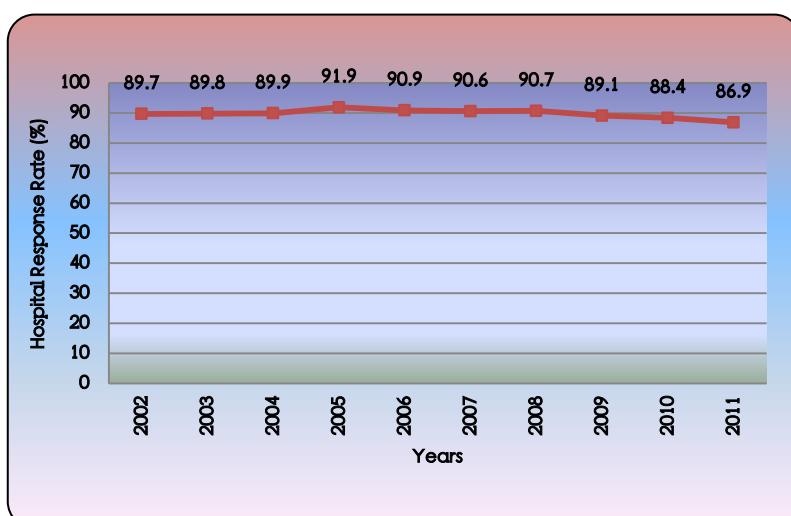

PART A

As shown in table (1), 78.9 % of public hospitals sent monthly hospital report throughout the year, 9.2% sent 6 to 11 months per year, 1.6% sent 1 to 5 months per year and 10.3% of hospitals did nil report in 2011. Kayin State had 100 % reporting in 2010 (Table 2) and 89.6 % in 2011 (Table 3). In 2011, highest reporting status was found in Chin State and Lowest was Shan (north).

Table (1) Reporting status of hospitals by the number of months reported (2002-2011)

Years	Number of months reported by hospitals								<i>Total number of hospitals</i>	<i>Union response rate</i>		
	12 Months		6-11 Months		1-5 Months		0-Month					
	Number	%	Number	%	Number	%	Number	%				
2002	520	66.9	175	22.5	20	2.6	62	8.0	777	89.7

Note:-

[*] per working days in hospital

According to table (4), health care services were more accessible to the people within ten years (2002-2011); admission cases, deliveries and surgical procedures were found as the rising trend and those of 2011 were as follows: admission cases 1324979, total deliveries 178372 and total surgical procedures 337726.

At the same time, hospital performance indicators were better than before. Average duration of stay was 6.7 days in 2002 and 5.9 days in 2011. Similarly, hospital death rate was 3.15 % and 2.14 % in 2002 and 2011 respectively.

Figure (3) Situation of sanction beds and available beds in public hospitals (2002-2011)

The trend for available and sanction beds in public hospitals were shown in figure (3). For ten years duration, the sanction beds considerably increased while as the available beds increased gradually. Among them, the highest for the sanction beds was found in 2011 and the highest for available beds was in 2010.

The disaggregated data for the percentage of occupancy based on available and sanction beds in these two successive years were illustrated in figure (4) and (5).

Figure (4) Percentage of occupancy based on available beds (2010 - 2011)

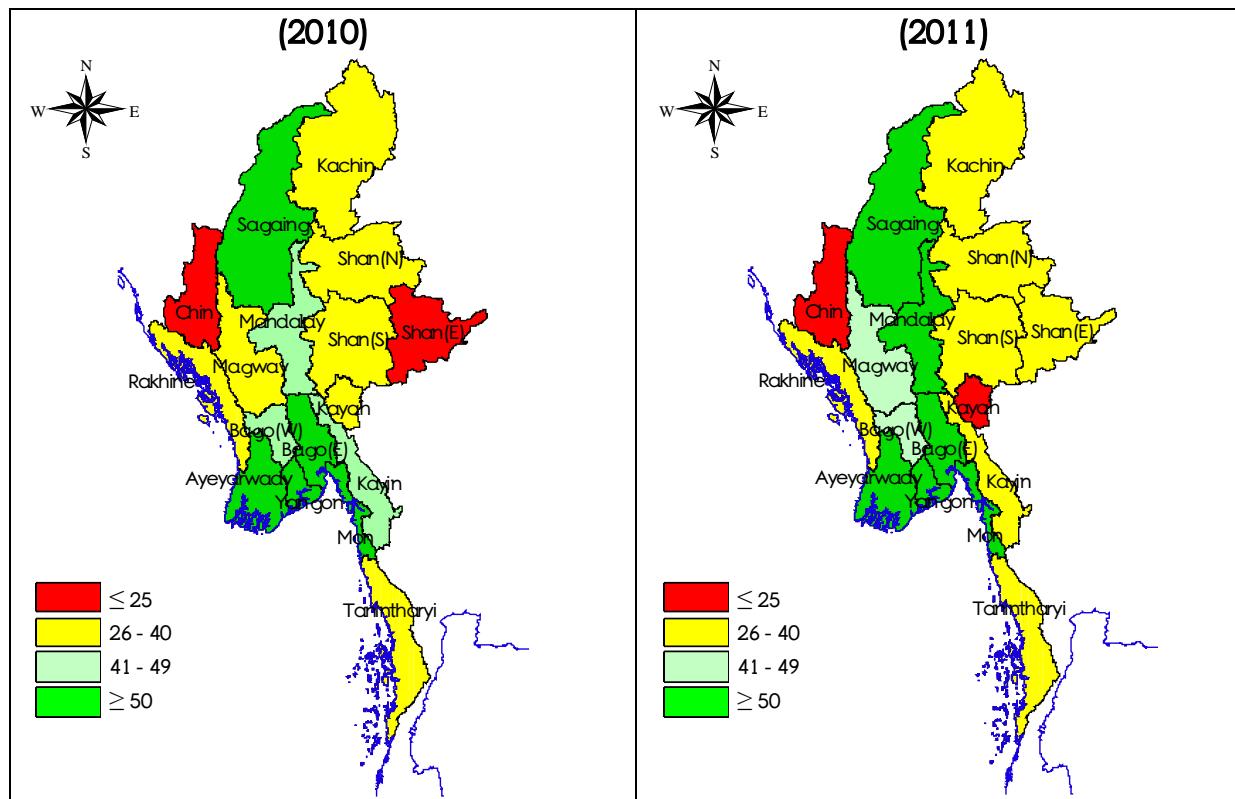

Figure (5) Percentage of occupancy based on sanction beds (2010 - 2011)

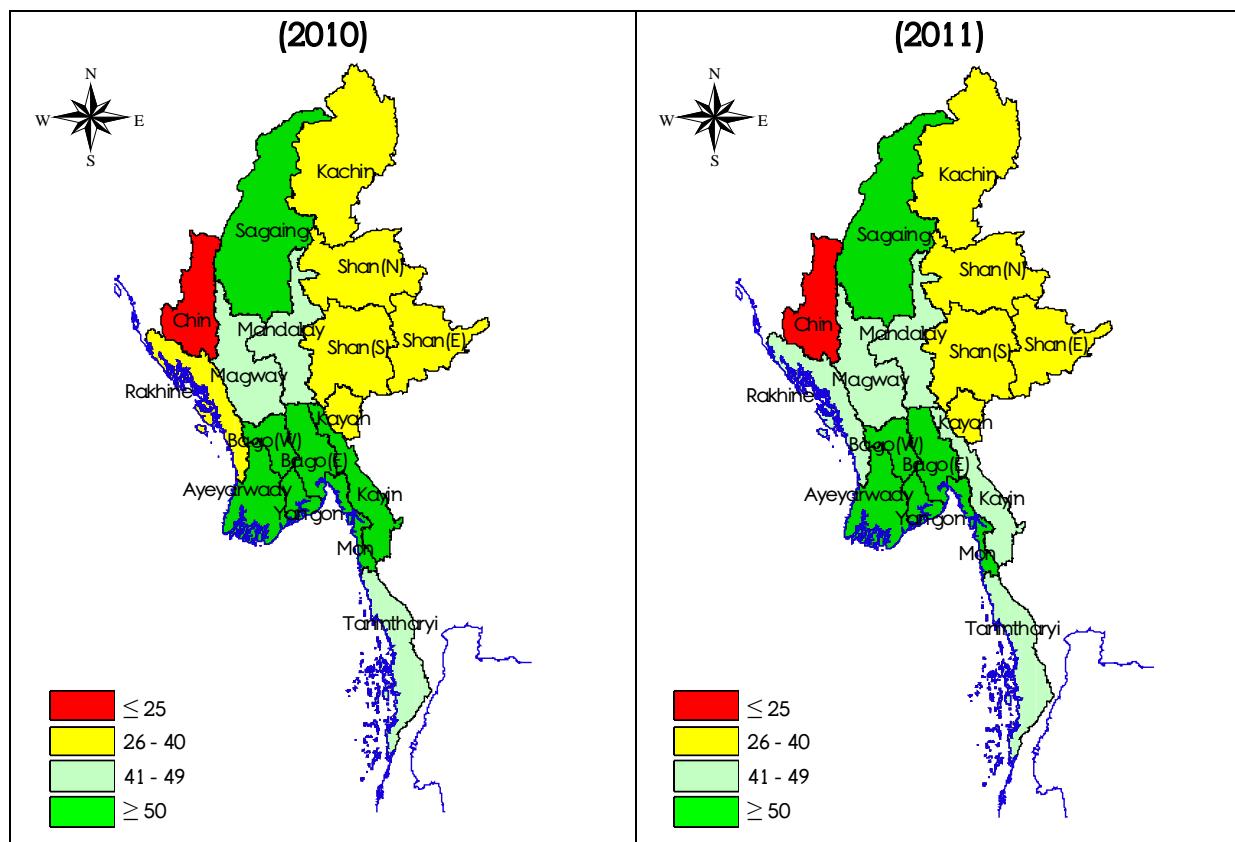

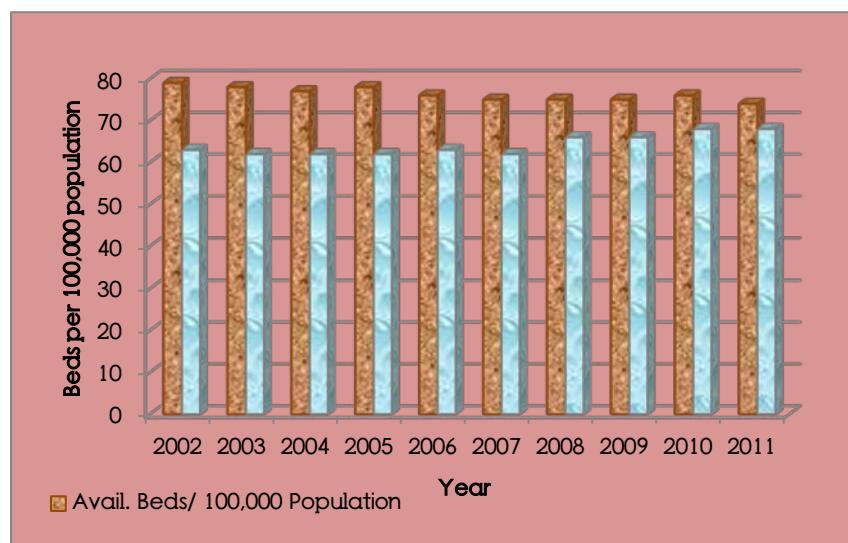

Figure (6) Availability of hospital beds per 100,000 population (2002-2011)

The available and sanctioned beds per 100,000 population from 2002 to 2011 were demonstrated in figure (6). The gap between available and sanctioned beds became narrower and narrower during ten years. Numbers of sanctioned beds increased from 2002 to 2011;

63 beds per 100,000 population in 2002 and 68 beds per 100,000 population in 2011.

The daily used of hospital bed per 100,000 population was illustrated in figure (7).

Figure (7) Daily use of hospital bed per 100,000 population (2010 - 2011)

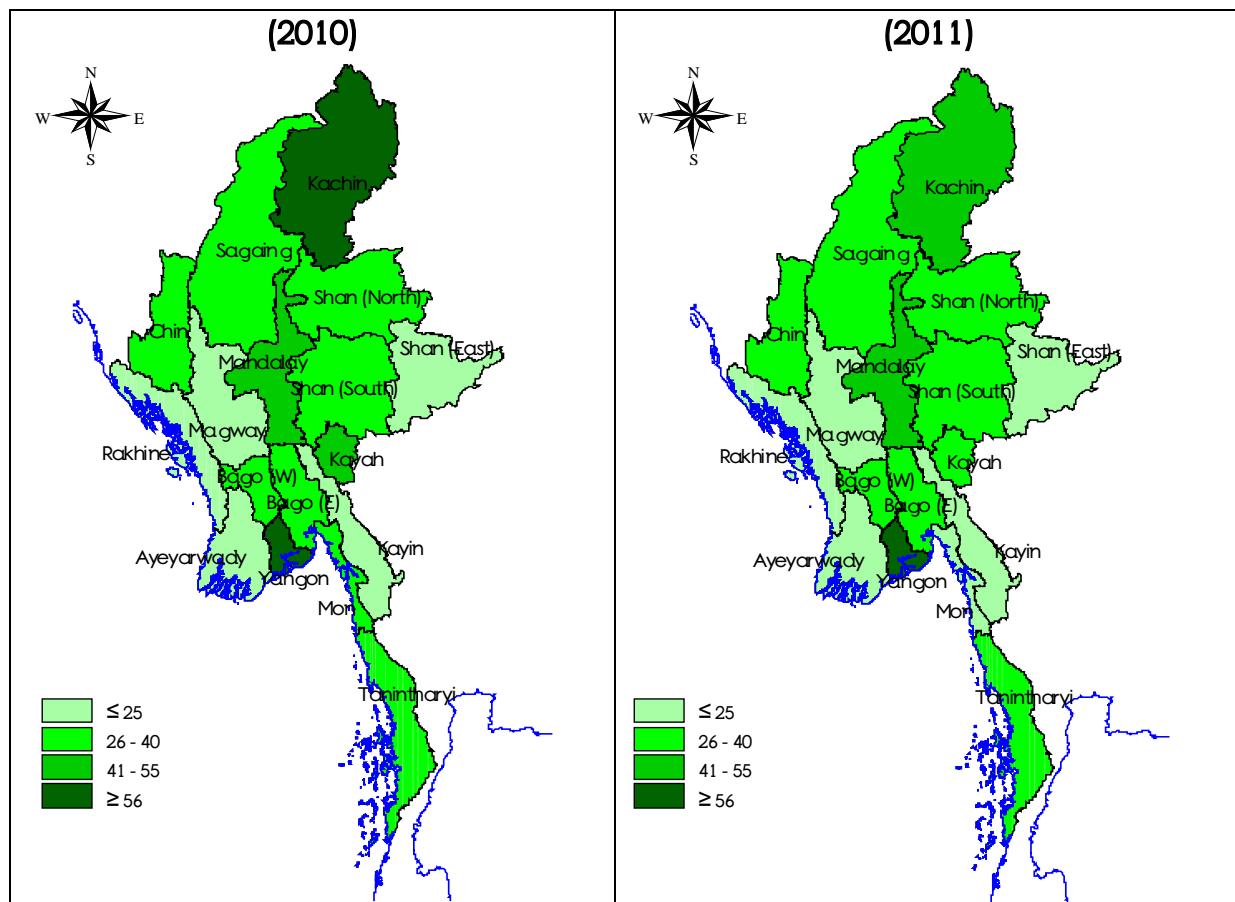

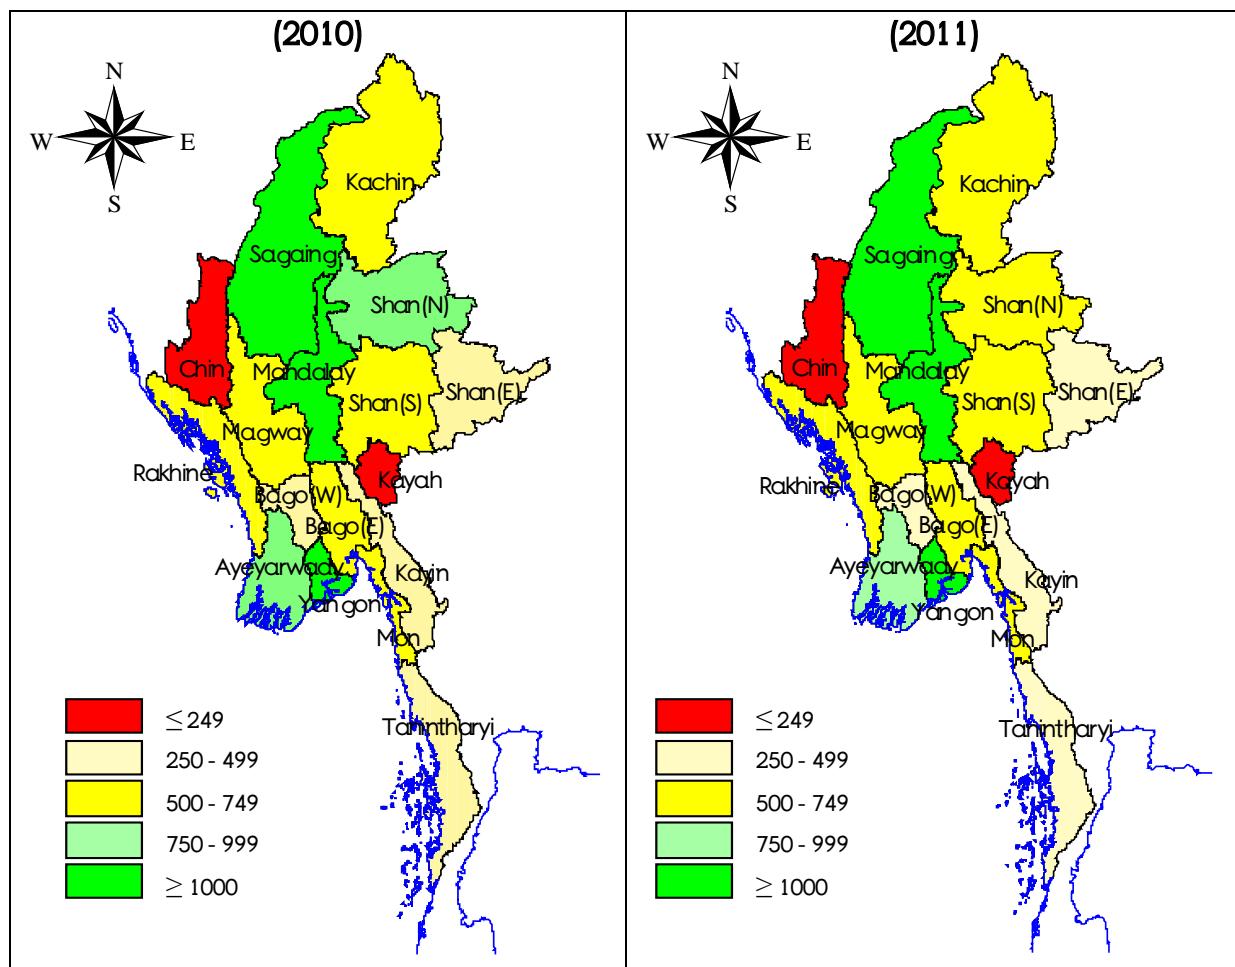

Figure (8) Average number of in-patients and out-patients per day (2002-2011)

In figure (8), average number of in-patients per day and out-patients per day also revealed increasing trend each year. In 2010 and 2011, more than twenty-one thousand people per day were admitted to public hospitals and round about fifteen thousand people per day were attended at out-patient clinics of public hospitals.

Figure (9) Average number of out-patient per day (2010 - 2011)

The average number of out-patient per day in 2010 and 2011 were illustrated in figure (9). The regions and states with the highest and lowest number remained the same in two successive years. However, those of the median groups varied from year to year.

Figure (10) Average number of in-patient per day (2010 - 2011)

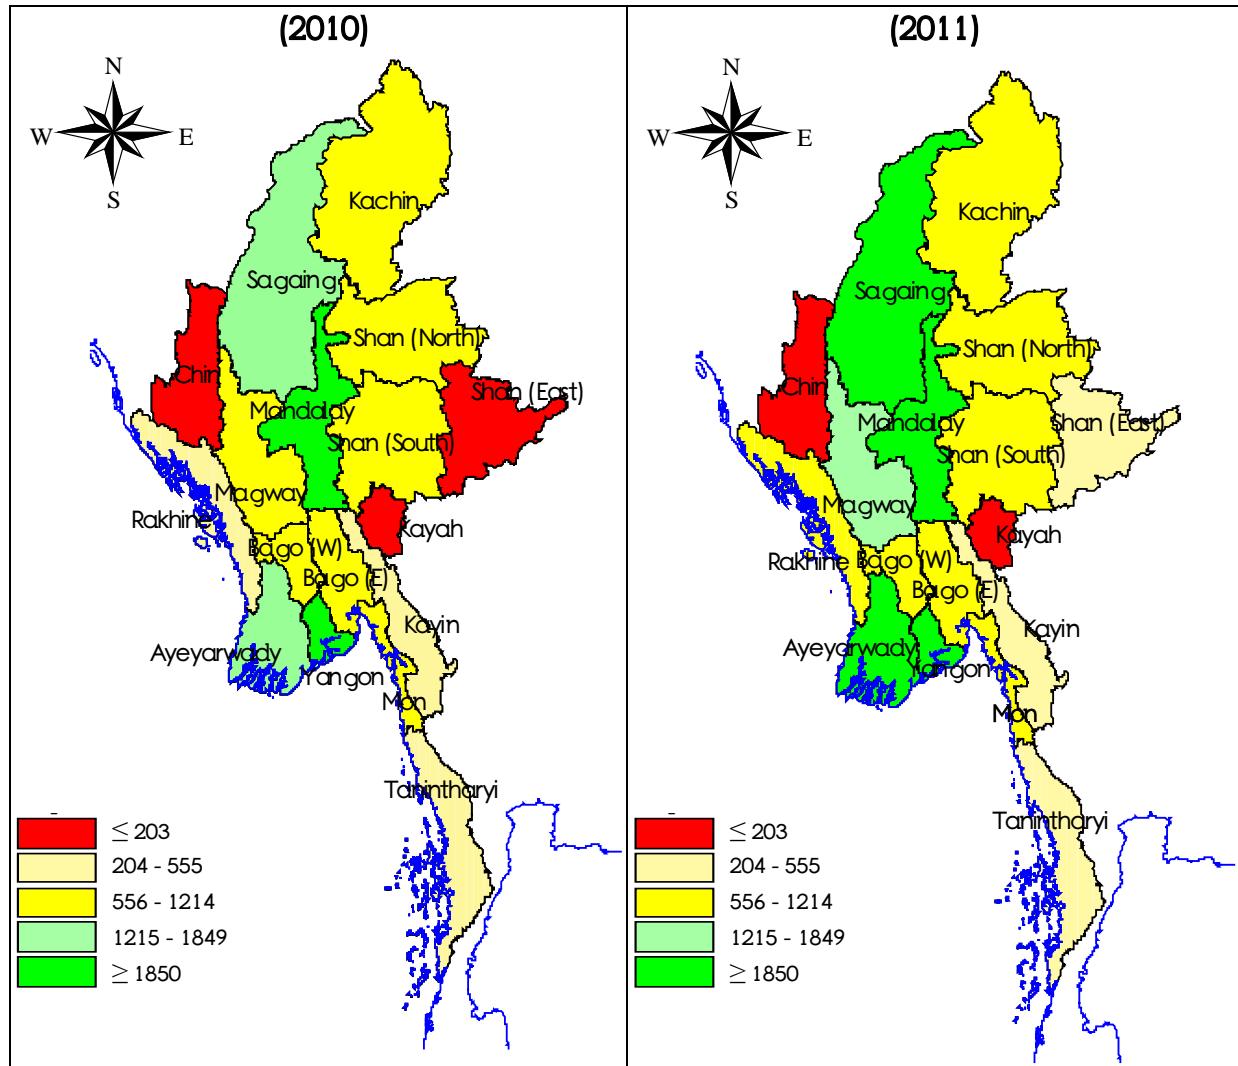

Figure (10) highlighted the in-patient per day in 2010 and 2011 by their group of average number. According to this figure, the average number of in-patient per day improved year by year because the highest group, more than 1850, was consisted of only two regions in 2010 and four regions in 2011. Moreover, the lowest group contained only two states in 2011 instead of three states in 2010.

Table (5 and 6) indicated the disaggregated information for the availability and utilization of hospital resources by regions and states in 2010 and 2011. The highest available beds per 100,000 populations was established in Kayar and Chin State in two consecutive years. However, among the regions and states, Kayar and Chin were shown as the lowest bed occupancy rates based on sanctioned bed.

Highest bed occupancy rate based on sanctioned bed was found in Bago (West) Region and Mon State alternately in 2010 and 2011. The daily use of hospital beds per 100,000 population was highest in Yangon Region (89.4 in 2010 and 83.8 in 2011), and lowest in Rakhine State (16.6 in 2010 and 17.4 in 2011). The highest achieving for both the admission per 1000 population and the out-patient attendances per 1000 population were found in Yangon Region and Kayar State in two successive years.

Figure (11) Out-patient attendances per 1000 population (2011)

The out-patient attendances by regions and states in 2011 were demonstrated in figure (11) and the union level was 60 per 1000 population. That of Yangon Region had the highest number and it was more than twice fold higher than the union level. Ayeyarwady had the lowest data and, by comparing the union figure, it was more than twice fold lower.

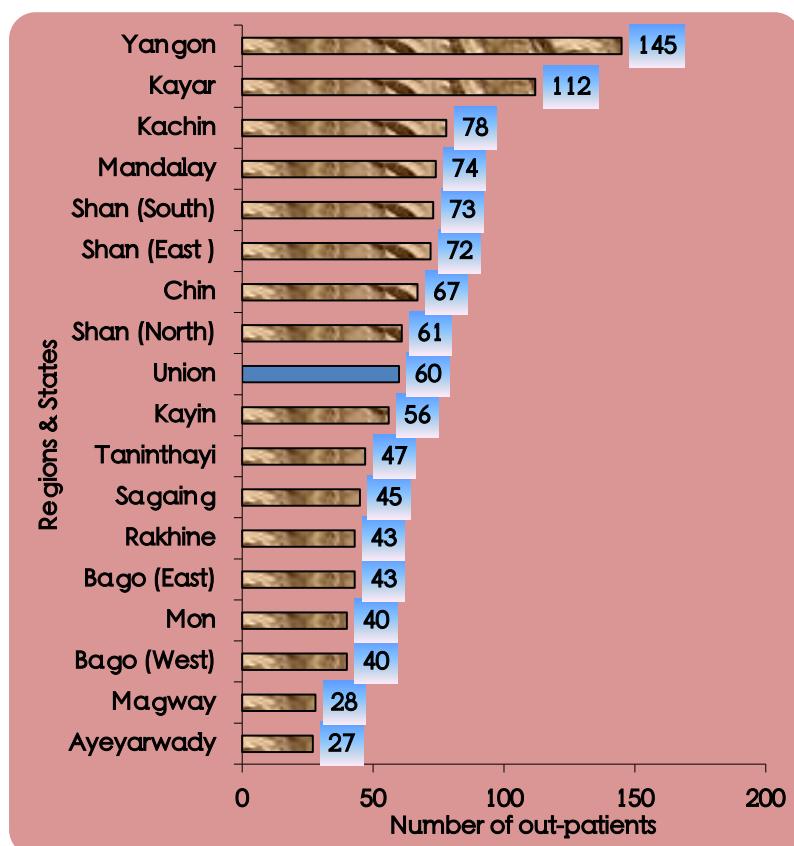

Figure (12) Hospital death rate (2010-2011)

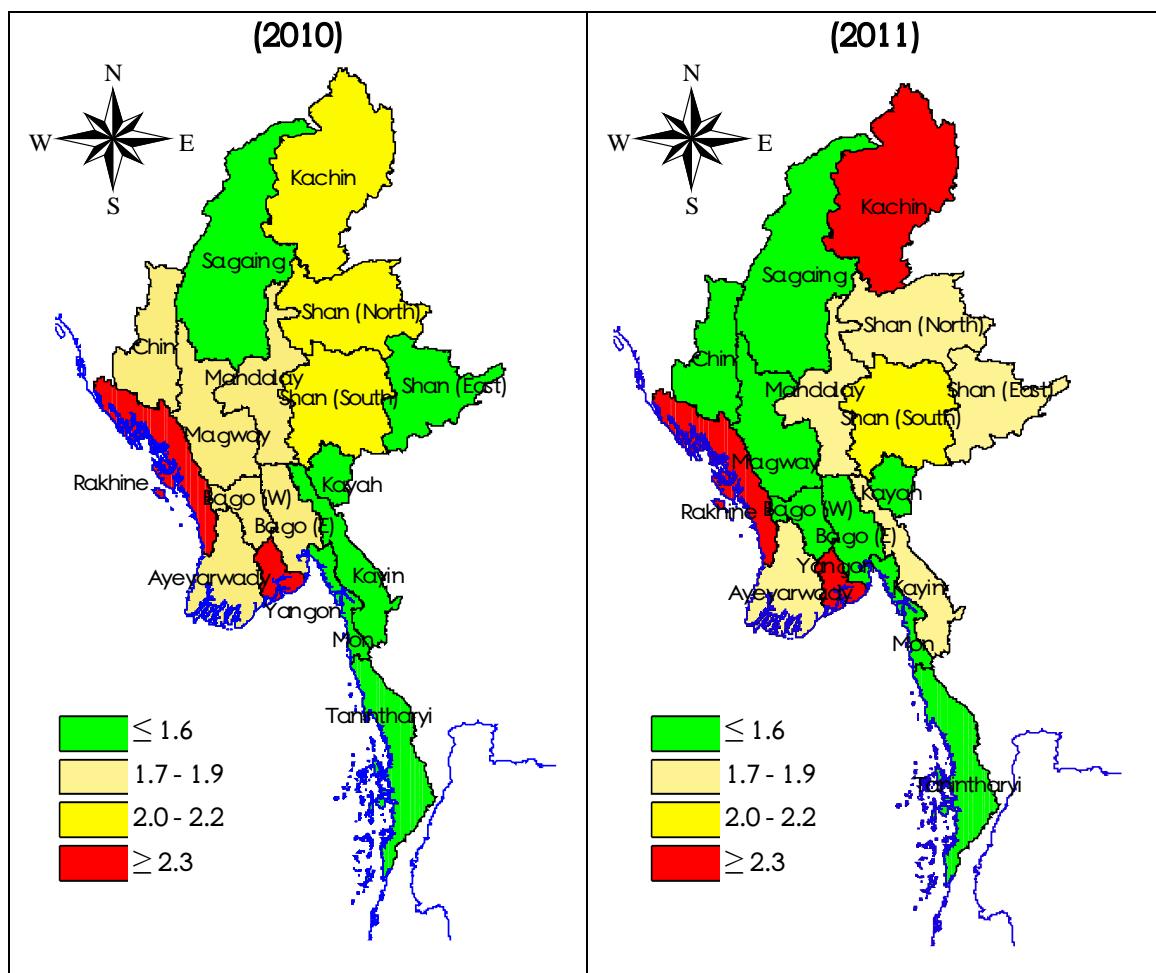

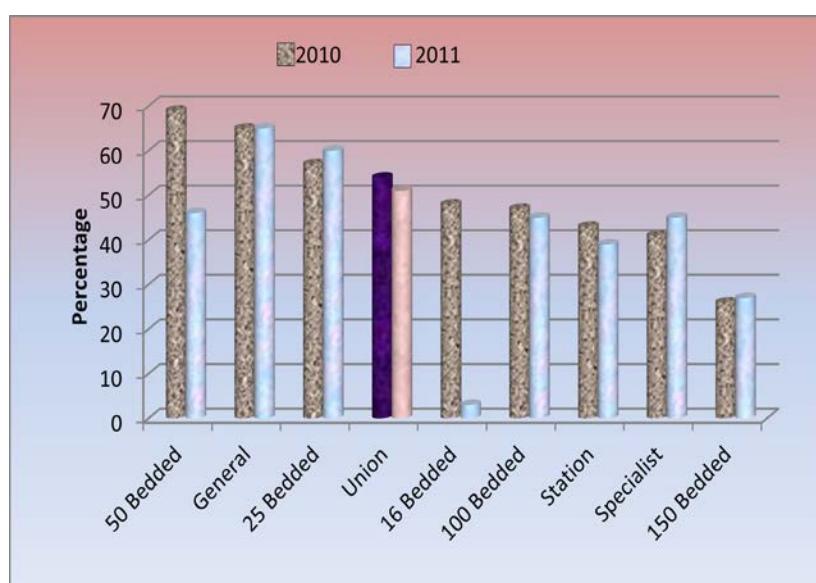

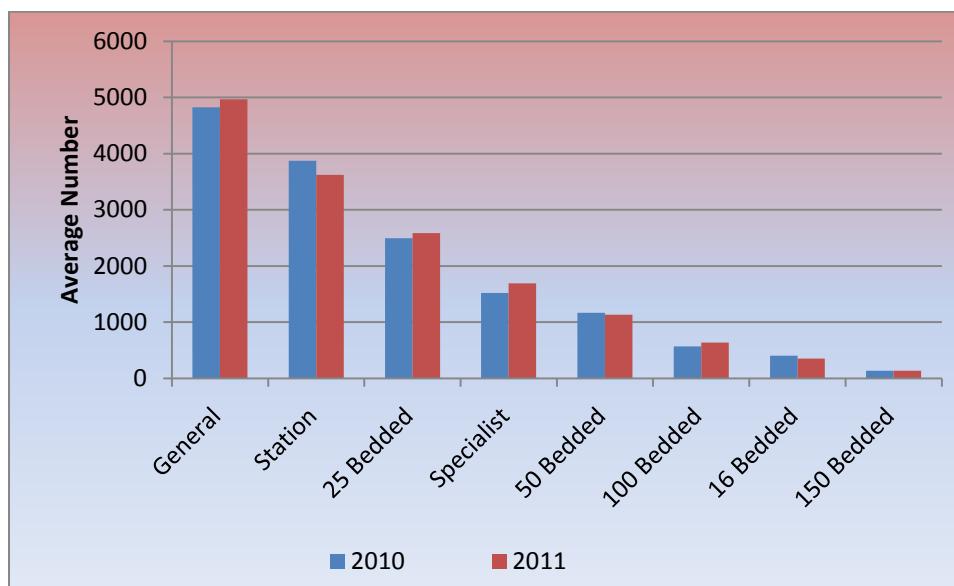

Figure (13) Percentage of bed occupancy based on sanction beds by types of hospital

(2010- 2011)

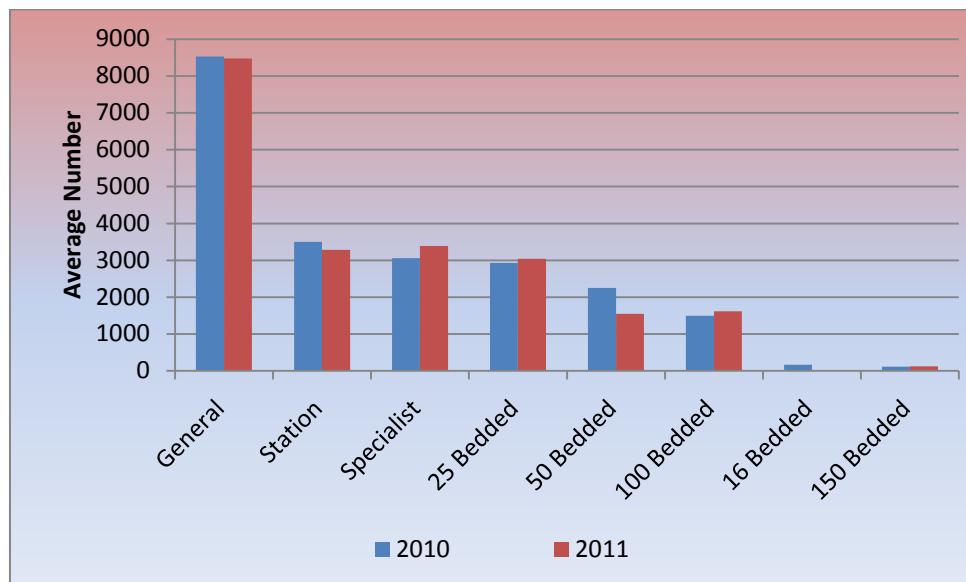

Percentage of bed occupancy based on sanctioned beds were arranged by type of hospitals as shown in figure (13). The type of hospitals with occupancy above the union level were 50 bedded, general and 25 bedded in 2010 and general and 25 bedded in 2011.

Figure (14) Average number of out-patients per day by types of hospital (2010- 2011)

According to figure (14), the maximum average number of out-patients per day was found in general hospitals, 4825 people in 2010 and 4968 in 2011 attended as out-patients every day. And the next highest was in station hospitals, 3870 and 3622 out-patients per day in 2010 and 2011 respectively.

Figure (15) Average number of in-patients per day by types of hospital (2010- 2011)

Regarding average number of in-patients per day, the uppermost was found in general hospitals followed by station hospitals in two consecutive years (figure 15).

69	25 bedded hospital	Mudon	Mon	81
70	25 bedded hospital	Pauk	Magway	81

In 2010 and 2011, there were (71) and (70) hospitals respectively in which bed occupancy rate based on sanctioned bed more than 80 %. Out of those, equal or more than 100% of bed occupancy rate based on sanctioned bed was found in one specialist hospital, six general hospitals, one (100) bedded hospital, six (50) bedded hospitals and twenty five (25) bedded hospitals in 2010. Similar data was found in one specialist hospital, six general hospitals, six (50) bedded hospitals and twenty five (25) bedded hospitals in 2011. Though the data were nearly the same, the amount of bed occupancy rate and ranks of the hospitals varied from year to year.

Surgical Operations, Deliveries, Stillbirths and Abortions in Hospital

		2011	76657	22.7	1E+05	34.7	1E+05	31.6	37165	11	337726	100

Surgical operation was performed in all public hospitals. The number of operation dramatically increased from 2009 to 2011 except 16 bedded hospitals. Most of surgical operations were performed in general hospitals with specialist services and lowest in 16 bedded hospitals. Spinal anaesthesia was the commonest method used in surgical operations (Table 11).

In 2011, the number of total surgical operations was 337726. Among those, 24.5 % was performed in Yangon, 18.4% was in Mandalay, 10.3% in Sagaing, 9.0% in Ayeyarwady and 6.5% in Magway Region (Table 12).

		2011	178372	172290	96.6	6082	3.4	37613	17.4

According to table (13), total deliveries in public hospitals were 165834 in 2010 and 178372 in 2011. Overall trend of live births as percentage of deliveries was in good shape; 96 % and 96.6% in 2010 and 2011 respectively. Abortion rate among hospital admitted cases were 17.6% in 2010 and 17.4% in 2011. Abortion cases were highest in station hospitals; 22.7% in 2010 and 21.6% in 2011.

The union figure for the admitted abortion rate was 17.6 in 2010 and 17.4 in 2011. According to table (14), the highest of those cases were found in Chin and Rakhine States not only in 2010 but also in 2011. Abortion rate in Chin State was 31.3% and 29.6 % for these years while those of Rakhine State were 29.3% and 26.1 % respectively.

Figure (16) Percent of abortions rate by regions and states (2009-2011)

SECTION II

MORBIDITY AND MORTALITY STATISTICS

(A) IN-PATIENT MORBIDITY AND MORTALITY PATTERNS OF HOSPITALS

By comparing the morbidity and mortality data in 2010 and 2011, the contributions of non-communicable diseases in mortality (42% in 2010 and 45% in 2011) were higher than those of morbidity (34% in 2010 and 37% in 2011).

Figure (21) Under 5 mortality rate, infant mortality rate and neonatal mortality rate in public hospitals (2010-2011)

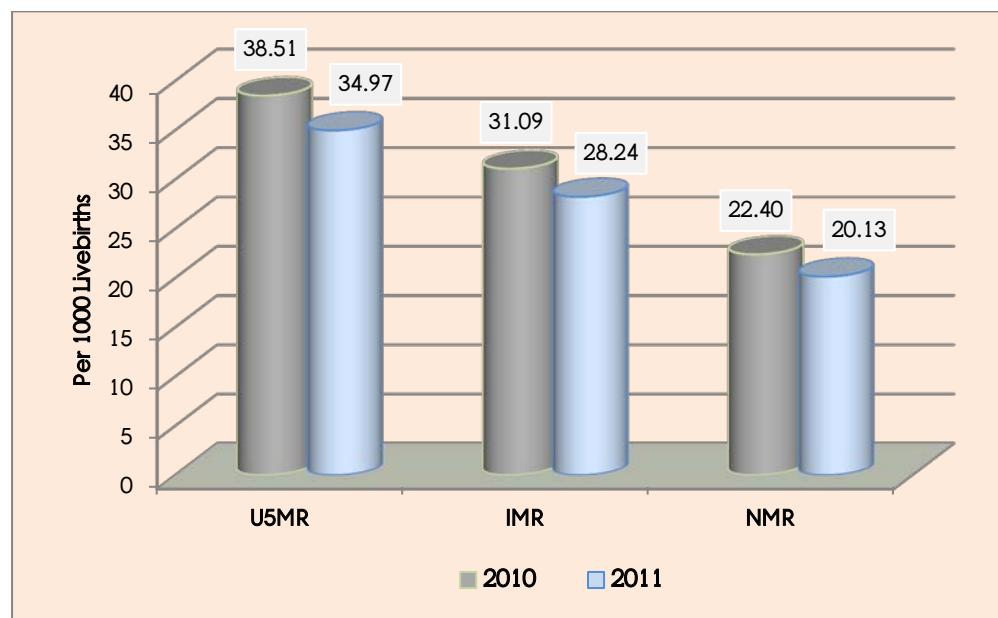

Figure (21) indicated the mortality rate of under five, infant and neonate in public hospitals in 2010 and 2011. All indicators showed the decreasing pattern in 2011 comparing with those of 2010. The leading causes of morbidity and mortality for the targeted population were discussed in the following tables which were disaggregated by sex.

Figure (22) Maternal mortality ratio for the hospitals (2010-2011)

Table (79) Causes of maternal deaths (2011)

Sr. No.	Descriptions	Number	Percent
1	Other pregnancies with abortive outcome	149	38.01
2	Other complications of pregnancy and delivery	89	22.70
3	Postpartum haemorrhage	57	14.54
4	Complications predominantly related to the puerperium and other obstetric conditions, not elsewhere classified	43	10.97
5	Oedema, proteinuria and hypertensive disorders in pregnancy, childbirth and the puerperium	30	7.65
6	Other maternal care related to fetus and amniotic cavity and possible delivery problems	15	3.83
7	Placenta praevia, premature separation of placenta and antepartum haemorrhage	9	2.30
	Total	392	100

Out-patient Morbidity Statistics

PART B

Table (80-85) described the data submitted from various out-patient departments for one day out-patient attendants in summer, rainy and winter season. More female patients than the male patients attended on that day. Antenatal screening and other supervision of pregnancy, other symptoms, signs and abnormal clinical and laboratory findings, fever of unknown origin, malaria, essential hypertension, injuries and diseases of respiratory system were found as the top five leading causes of out-patient morbidity alternatively.

Table (80) Single leading causes of out-patient morbidity statistics from all out-patient departments, 2010 [Summer Season]

Sr. No.	ICD-10 Basic Code	Causes	Male		Female		Total	
			No.	%	No.	%	No.	%
1	294	Antenatal screening and other supervision of pregnancy	0	0.0	264	25.4	264	14.9
2	270	Other symptoms, signs and abnormal clinical and laboratory findings	78	10.7	103	9.9	181	10.2
3	268	Fever of unknown origin	60	8.3	60	5.8	120	6.8
4	043	Malaria	58	8.0	40	3.8	98	5.5
5	281	Other injuries of specified, unspecified and multiple body regions	70	9.6	28	2.7	98	5.5
6	179	Other diseases of the respiratory system	41	5.6	46	4.4	87	4.9
7	005	Diarrhoea and gastroenteritis of presumed infectious origin	43	5.9	38	3.7	81	4.6
8	007	Respiratory tuberculosis	39	5.4	33	3.2	72	4.1
9	145	Essential (primary) hypertension	23	3.2	39	3.8	62	3.5
10	237	Oedema, proteinuria and hypertensive disorders in pregnancy, childbirth and the puerperium	0	0.0	23	2.2	23	1.3
11	167	Other acute upper respiratory infections	14	1.9	23	2.2	37	2.1
12	198	Infections of the skin and subcutaneous tissue	19	2.6	15	1.4	34	1.9
13	098	Other anaemias	12	1.7	20	1.9	32	1.8
14	184	Gastritis and duodenitis	15	2.1	15	1.4	30	1.7
15	267	Abdominal and pelvic pain	8	1.1	19	1.8	27	1.5
	...	All other causes	247	33.9	274	26.3	521	29.5
		Total	727	100.0	1040	100.0	1767	100.0

Remark : Out-patients morbidity are 10 percent data of one day at one season.

A. GRAPHICAL PRESENTATION OF MORBIDITY FINDING (2010)

I. Certain infectious and parasitic diseases (A00-B99)

Figure (1) Proportion of selected infectious diseases among certain infectious and parasitic diseases

II. Neoplasms (C00-D48)

Figure (2) Proportion of selected diseases among neoplasms

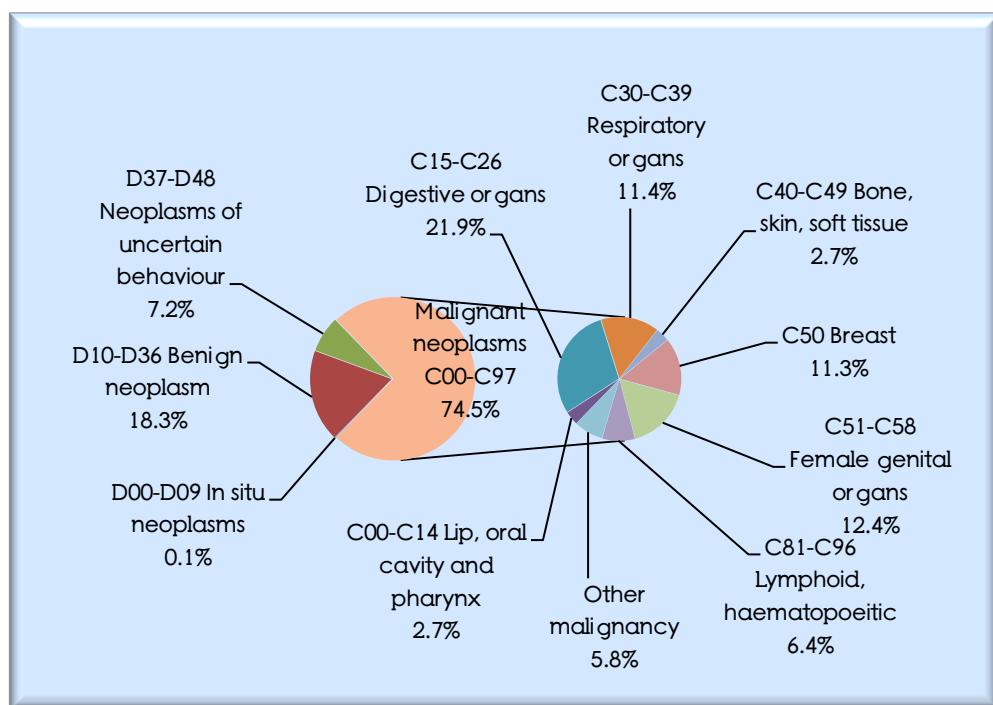

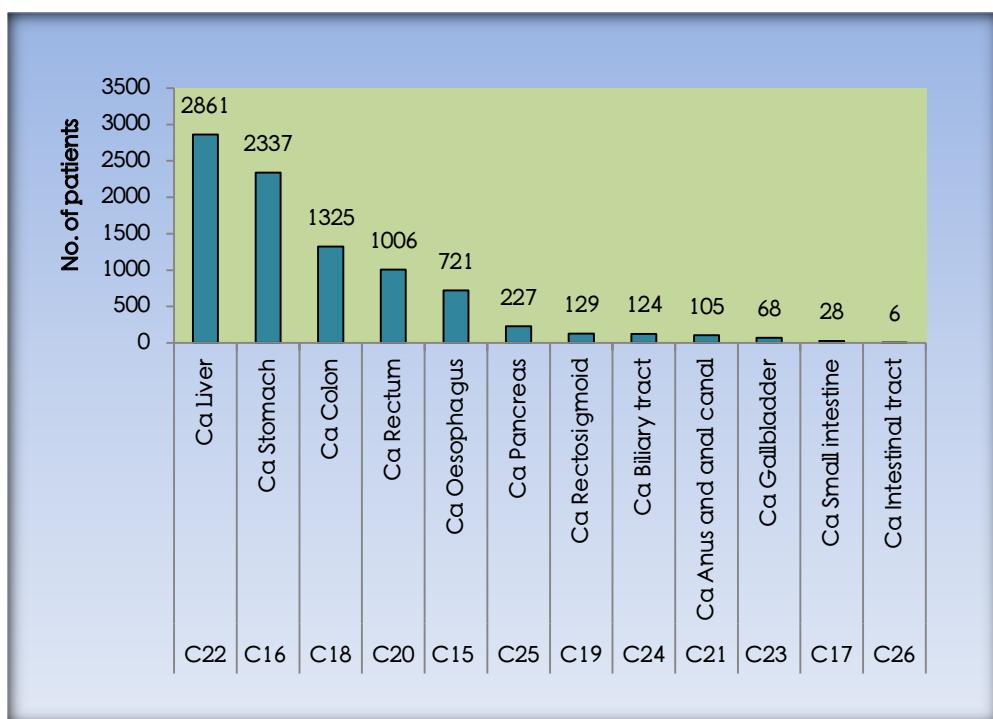

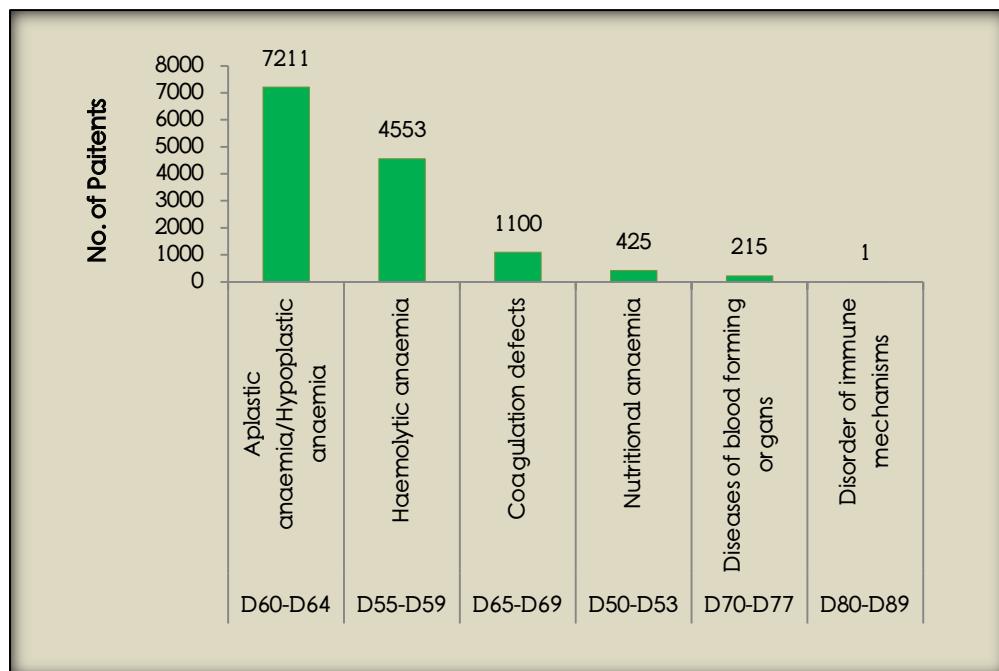

Figure (3) Distribution of neoplasm in digestive system

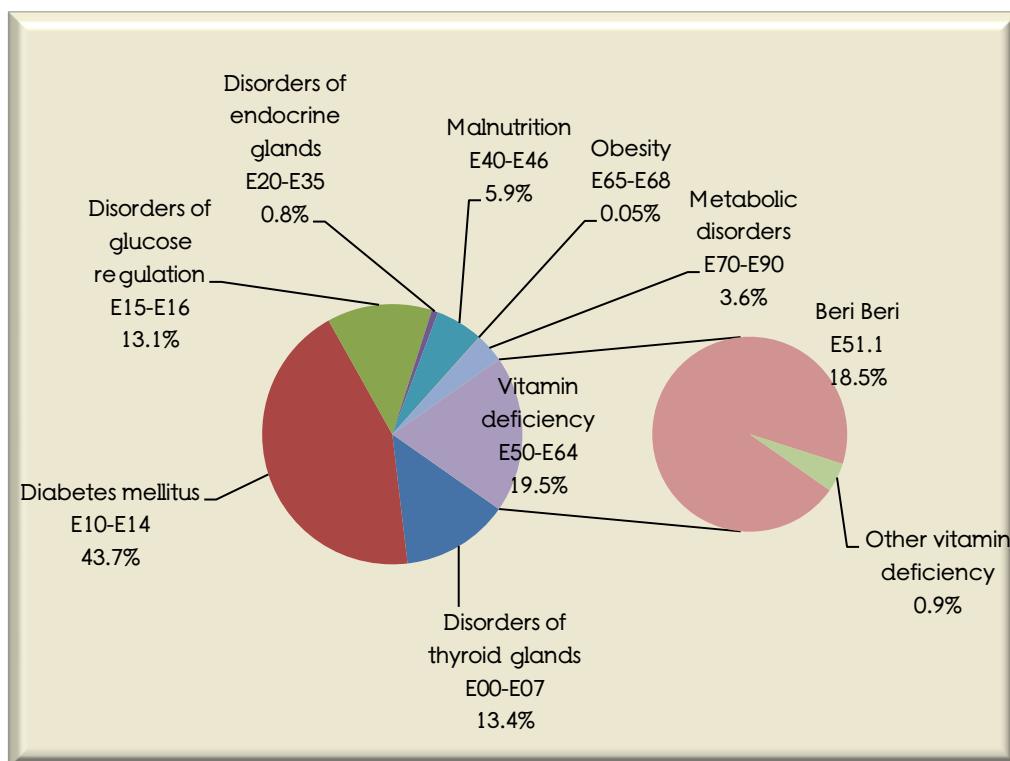

III. Diseases of the blood and blood-forming organs and disorders involving the immune mechanism (D50-D89)

Figure (4) Diseases of blood and blood forming organs

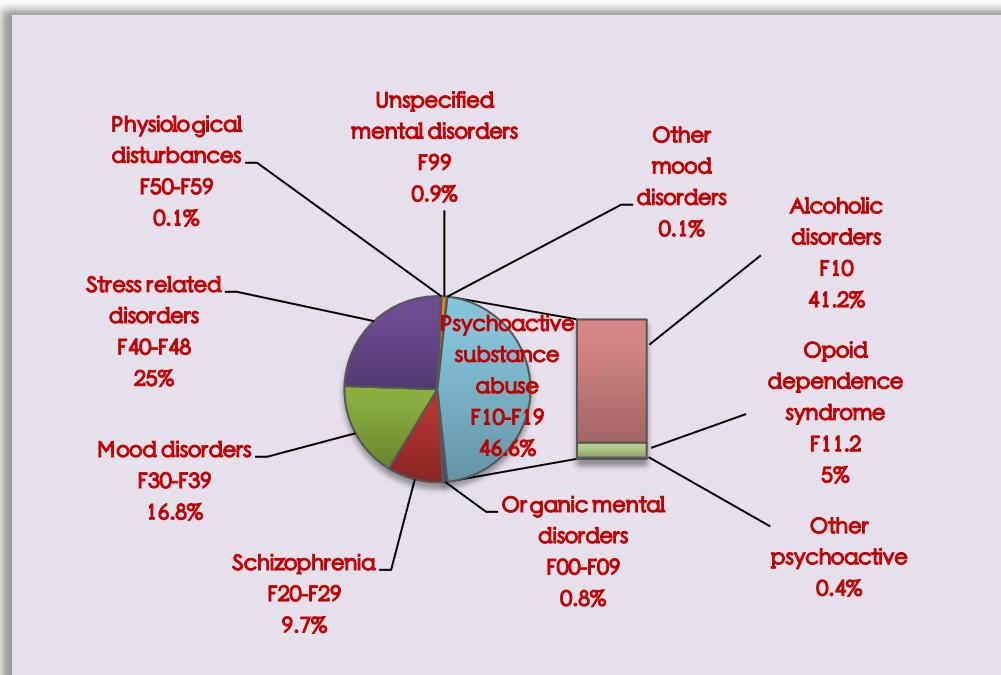

IV. Endocrine, nutritional and metabolic diseases (E00-E90)

Figure (5) Distribution on endocrine, nutritional and metabolic diseases

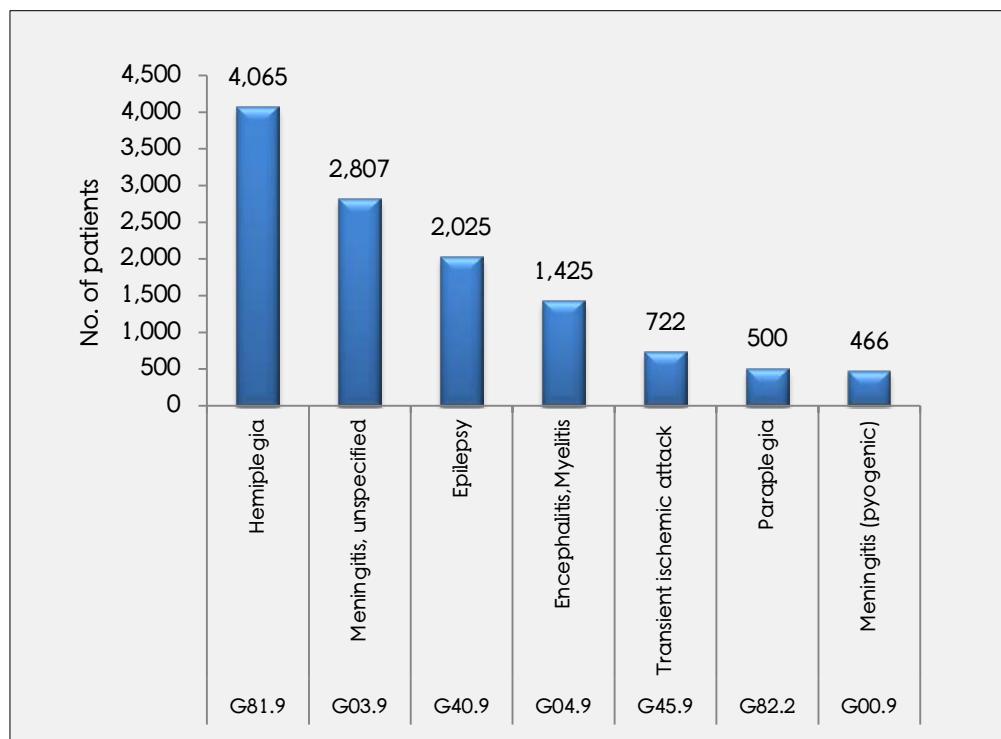

V. Mental and behavioral disorders (F00-F99)

Figure (6) Percentage distribution on mental and behavioral disorders

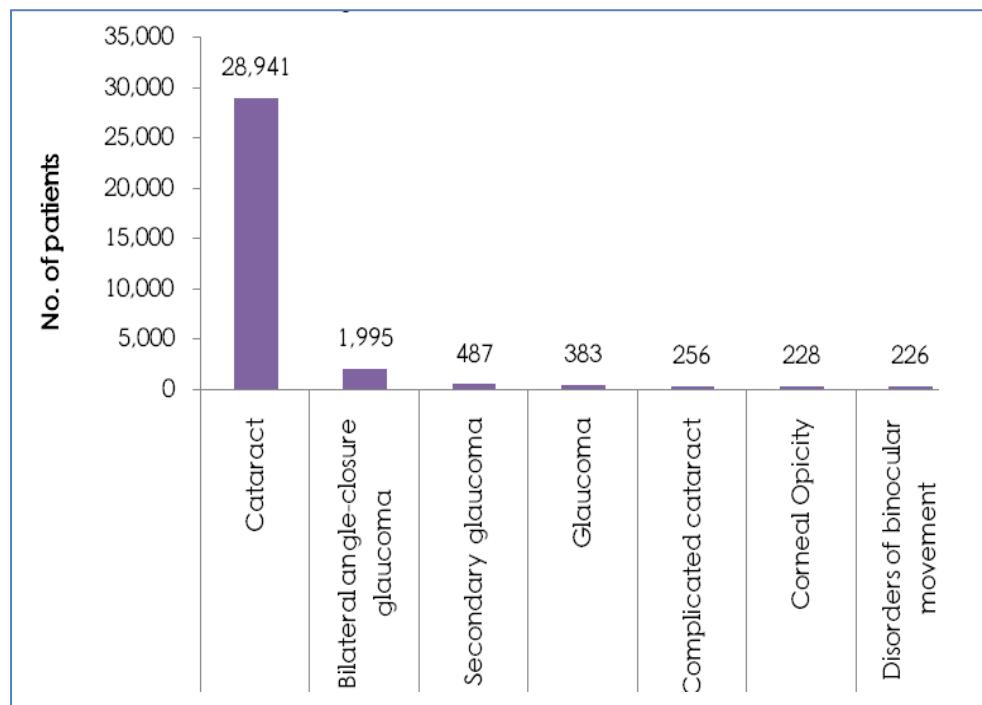

VI. Diseases of the nervous system (G00-G99)

Figure (7) Top 7 diseases of the nervous system

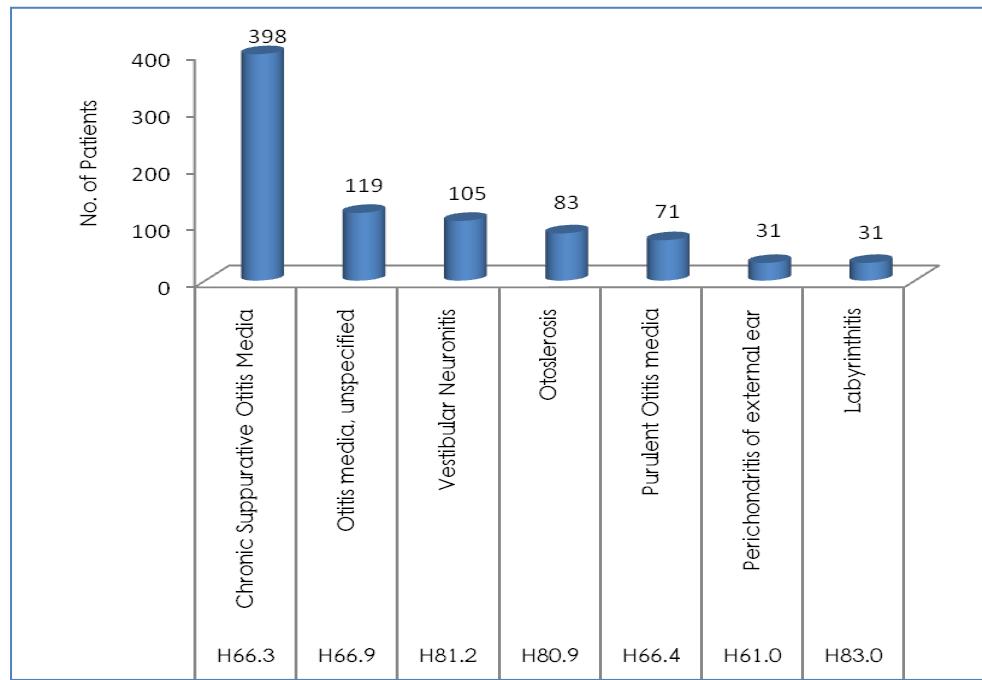

VII. Diseases of the eye and adnexa (H00-H59)

Figure (8) Top 7 diseases of the eye and adnexa

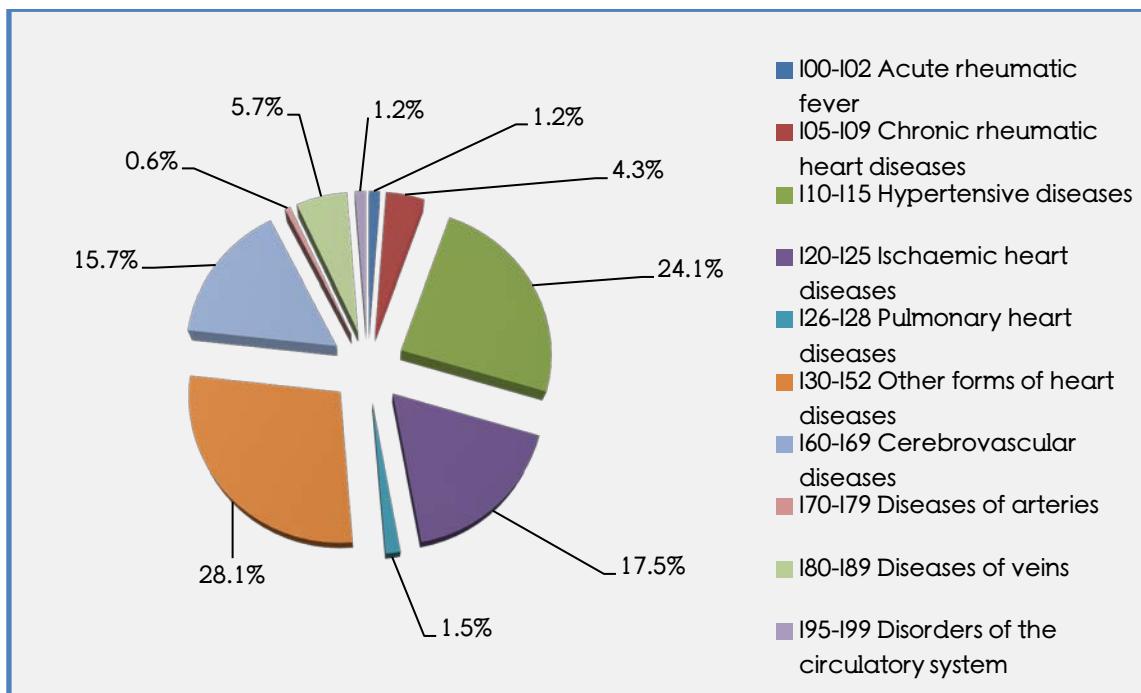

VIII. Diseases of the ear and mastoid process (H60-H62)

Figure (9) Top 7 diseases of the ear and mastoid process

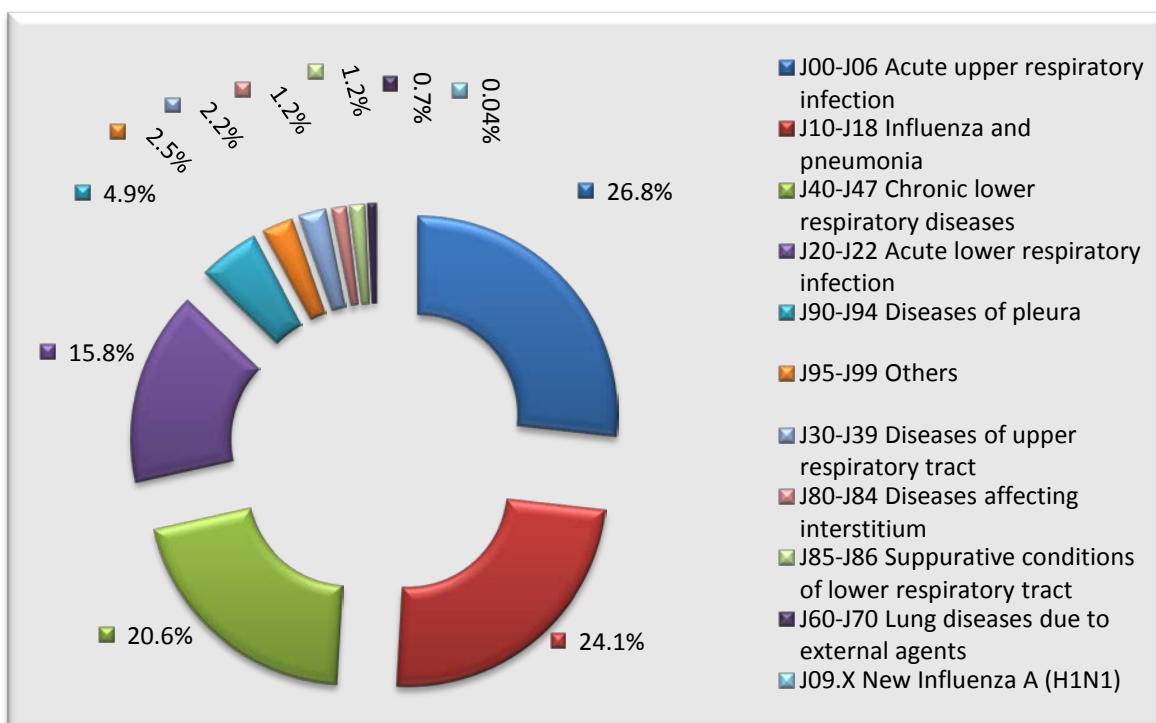

IX. Diseases of the circulatory system (I00-I99)

Figure (10) Percent distribution of diseases of the circulatory system

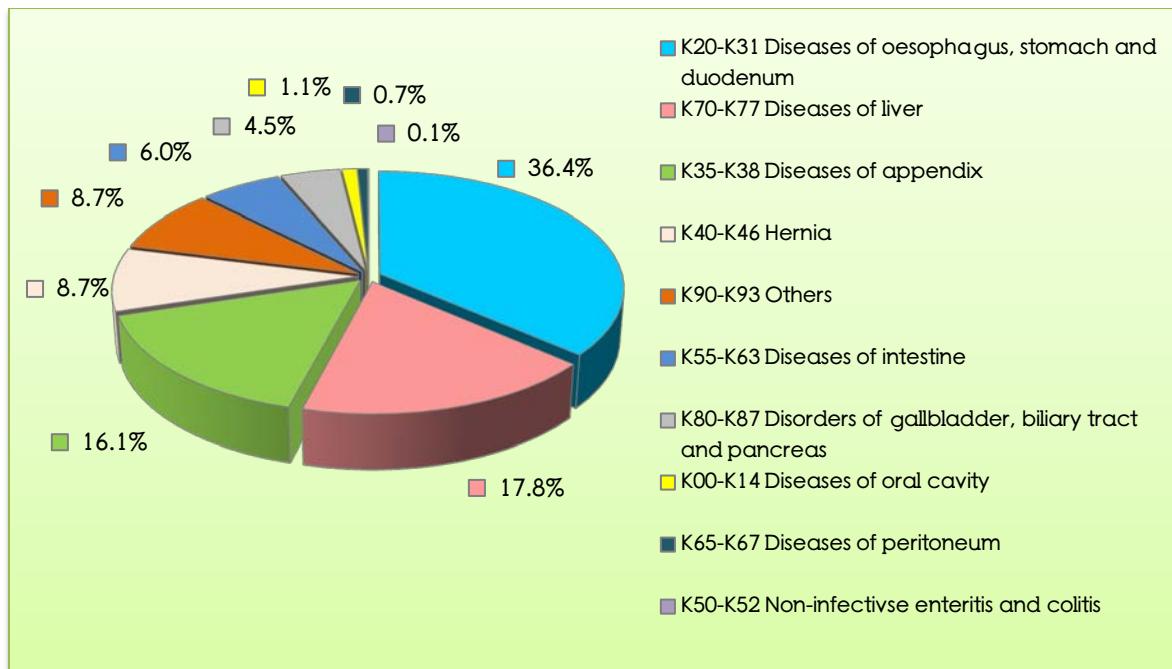

X. Diseases of the respiratory system (J00-J99)

Figure (11) Distribution of diseases of the respiratory system

XI. Diseases of the digestive system (K00-K93)

Figure (12) Percent distribution of diseases of the digestive system

XII. Diseases of the skin and subcutaneous tissue (L00-L99)

Figure (13) Distribution of top 10 diseases of skin and subcutaneous tissue

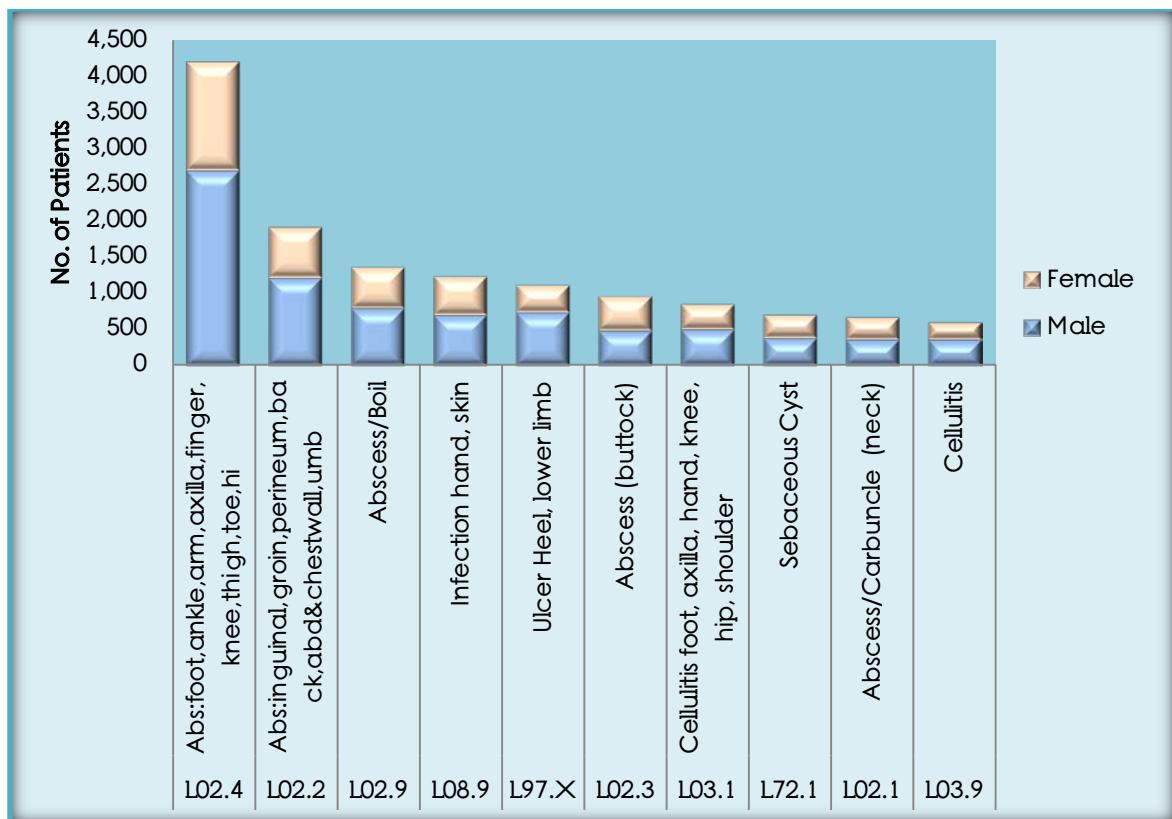

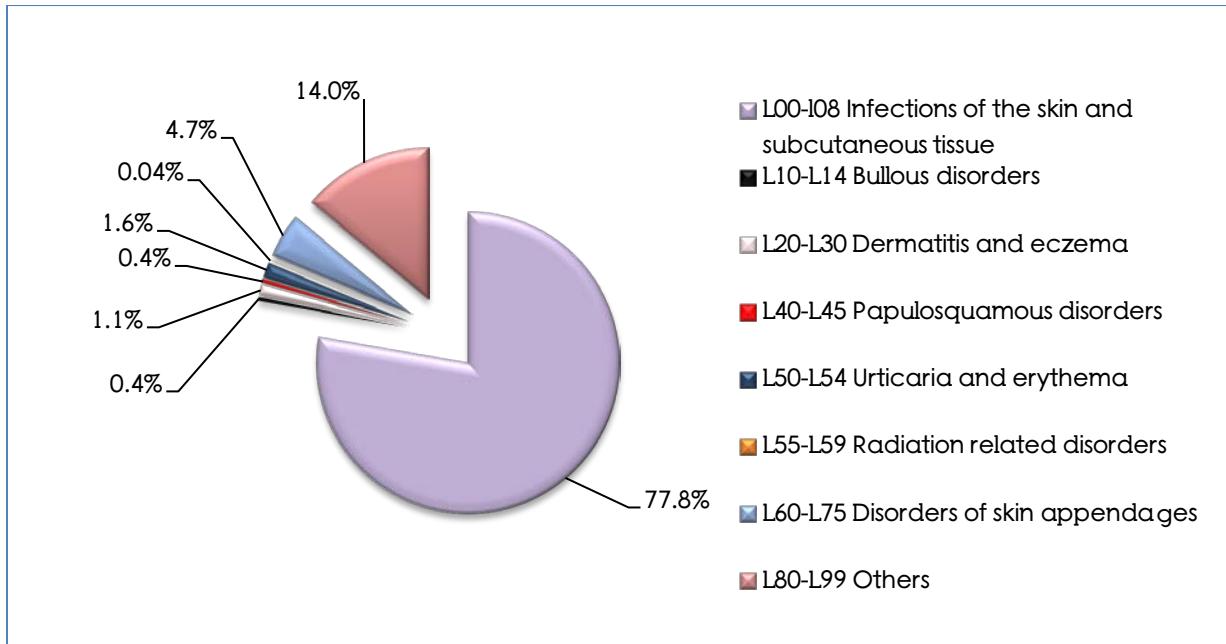

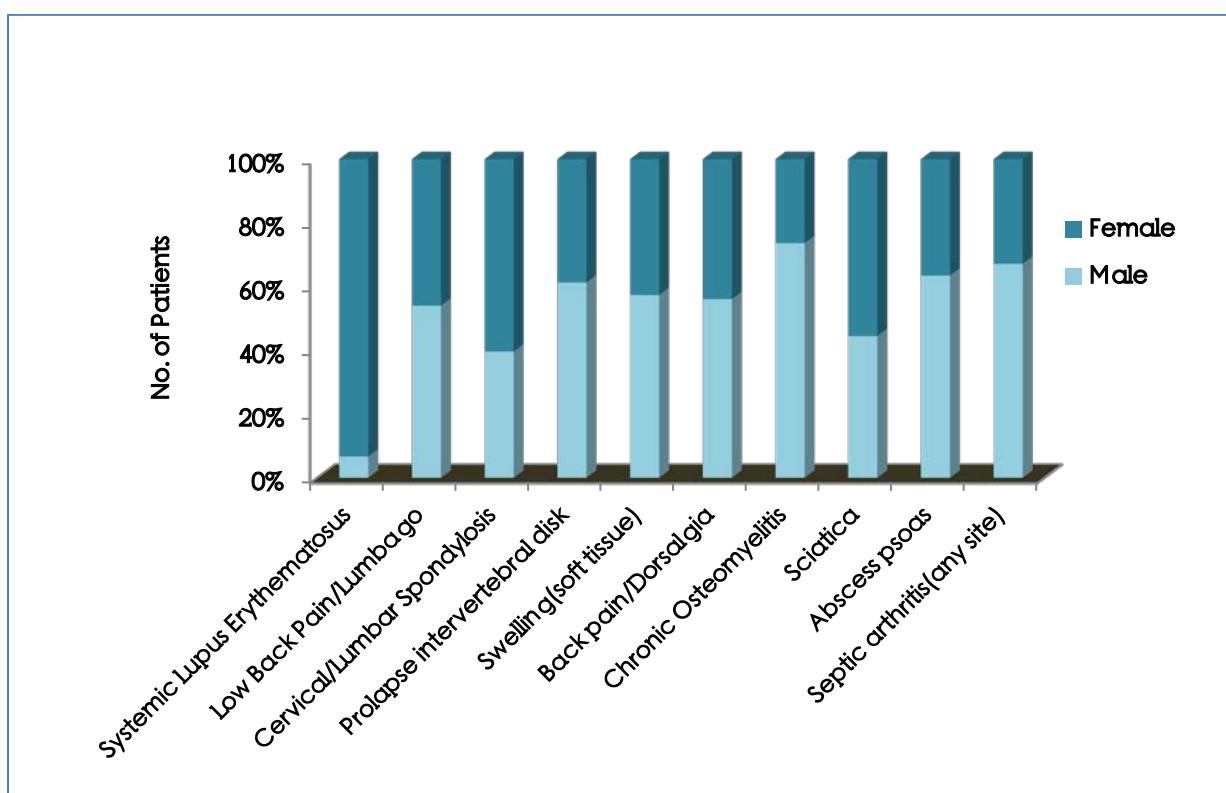

Figure (14) Percent distribution of different types of diseases in skin and subcutaneous tissue

XIII. Diseases of the musculoskeletal system and connective tissue (M00-M99)

Figure (15) Distribution of top 10 diseases of the musculoskeletal and connective tissue by gender

XIV. Diseases of the genitourinary system (N00-N99)

Figure (16) Distribution of top 10 diseases of the genitourinary system (Male)

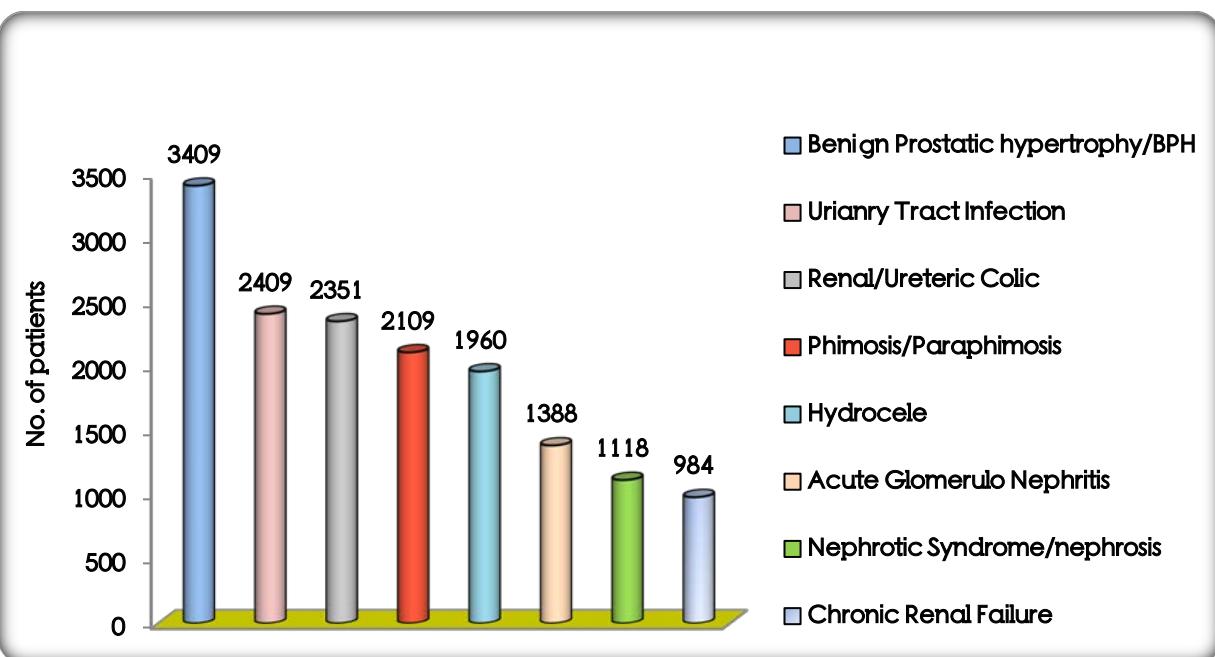

Figure (17) Distribution of top 10 diseases of the genitourinary system (Female)

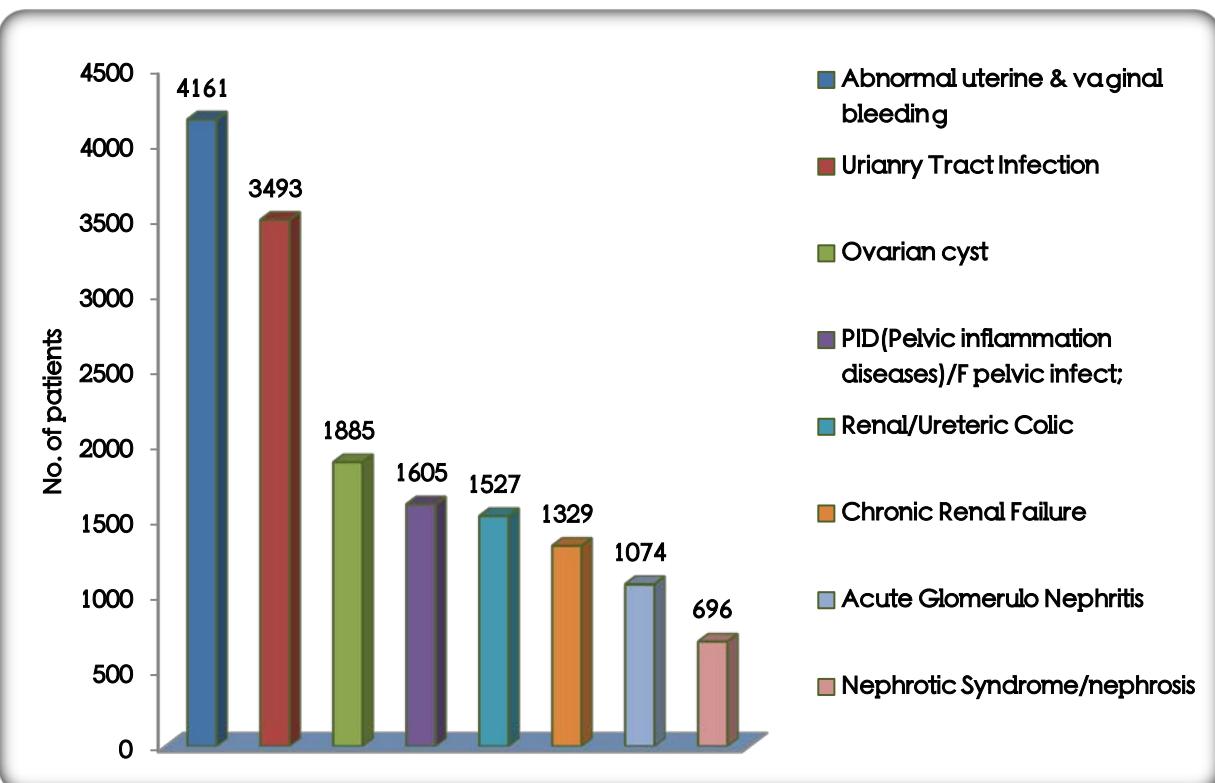

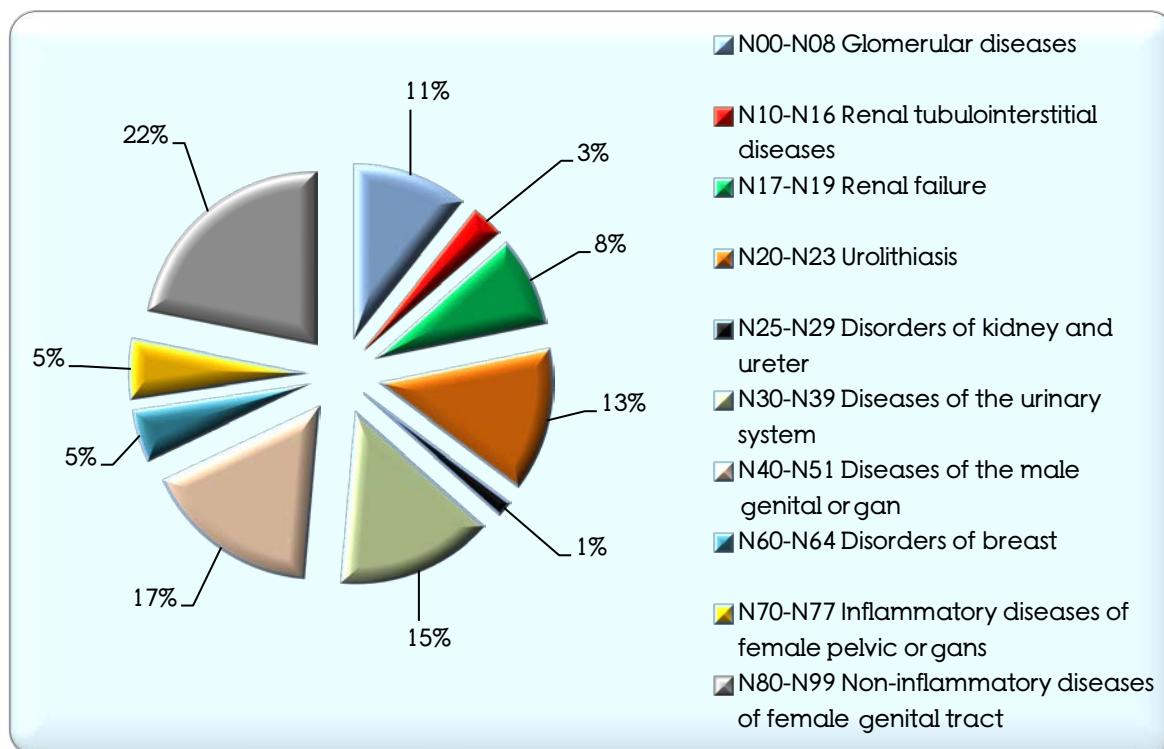

Figure (18) Percent distribution of different types of diseases of the genitourinary system

XV. Pregnancy, childbirth and the puerperium (O00-O99)

Figure (19) Percent distribution of pregnancy, childbirth and the puerperium

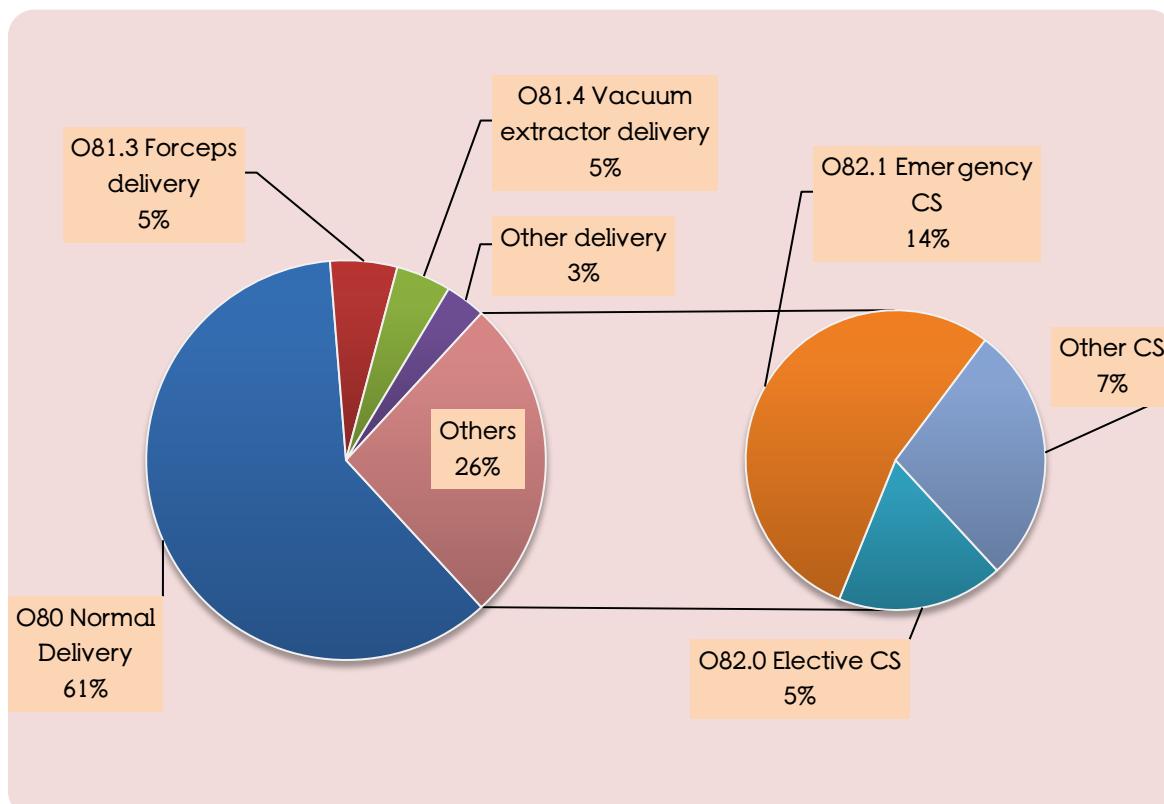

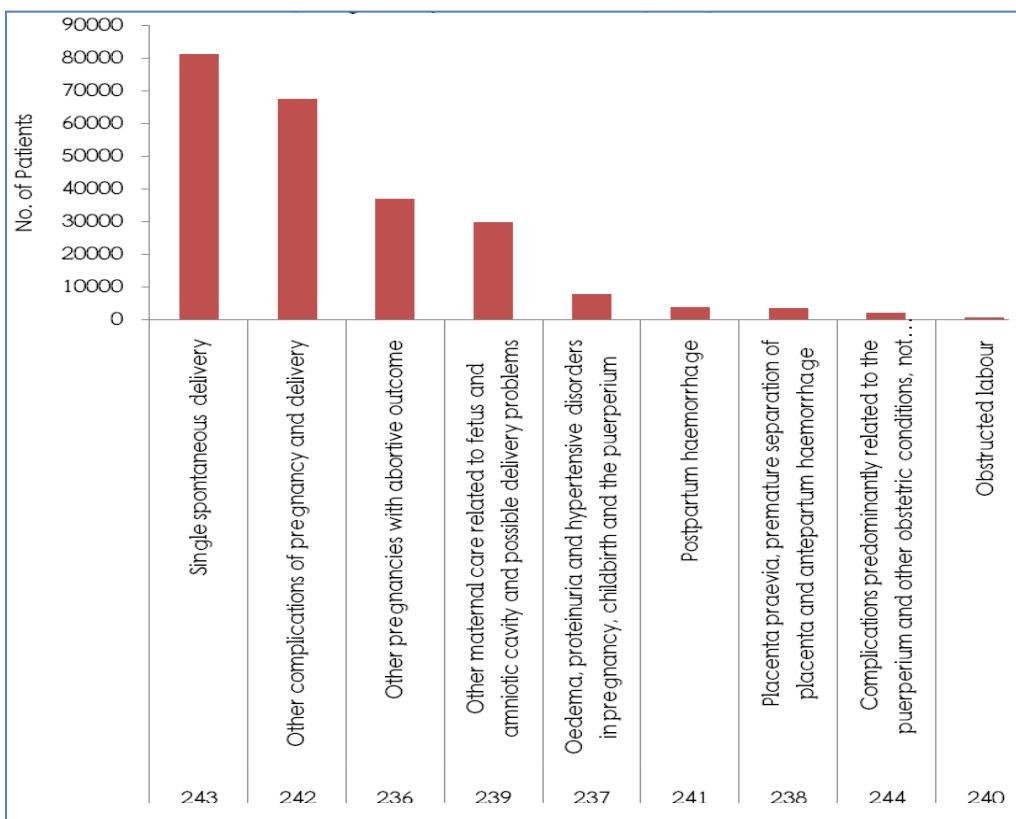

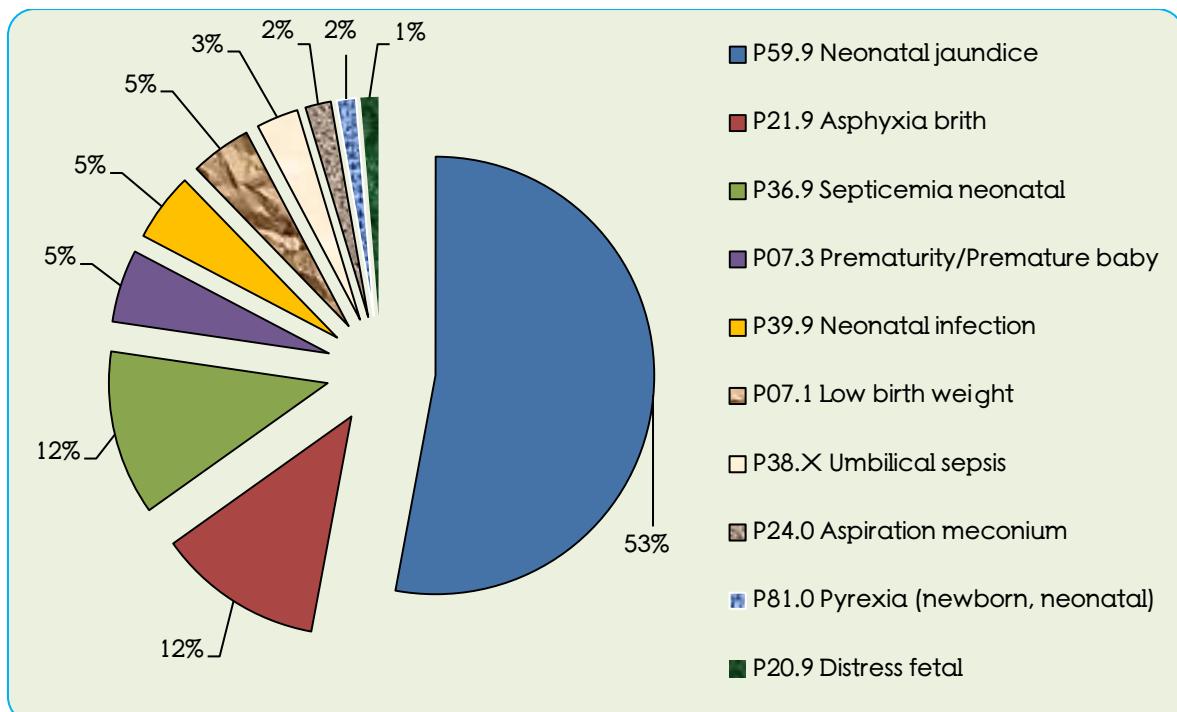

Figure (20) Distribution of admission on pregnancy, childbirth and the puerperium

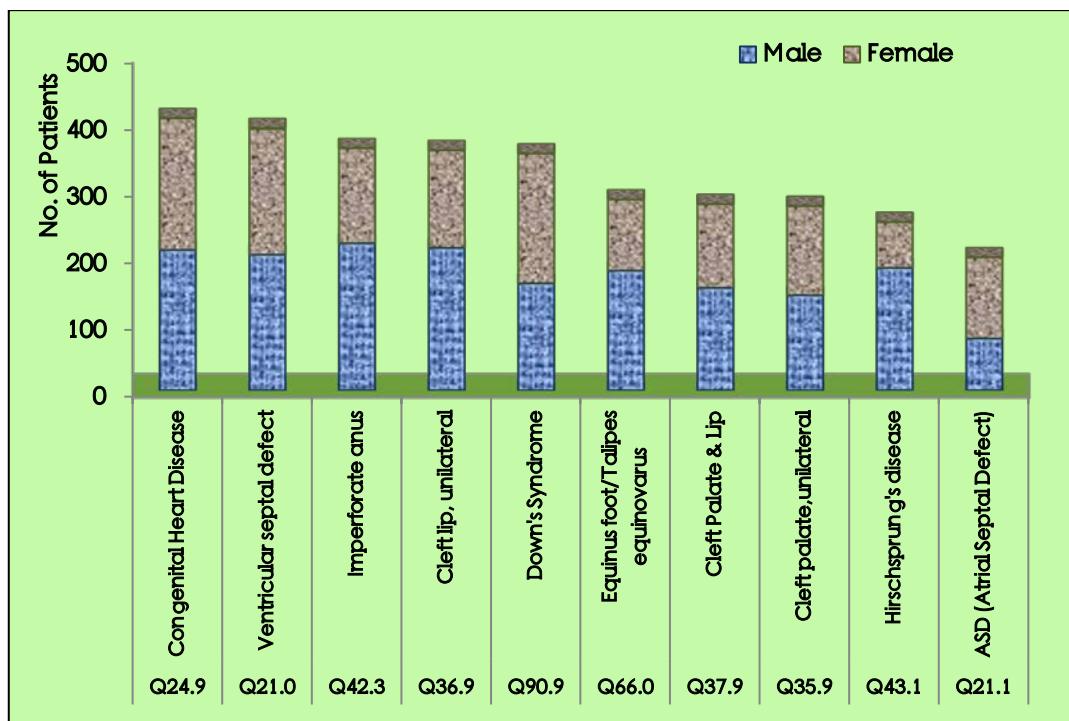

XVI. Certain conditions originating in the perinatal period (P00-P96)

Figure (21) Percent distribution of top 10 conditions in the perinatal period

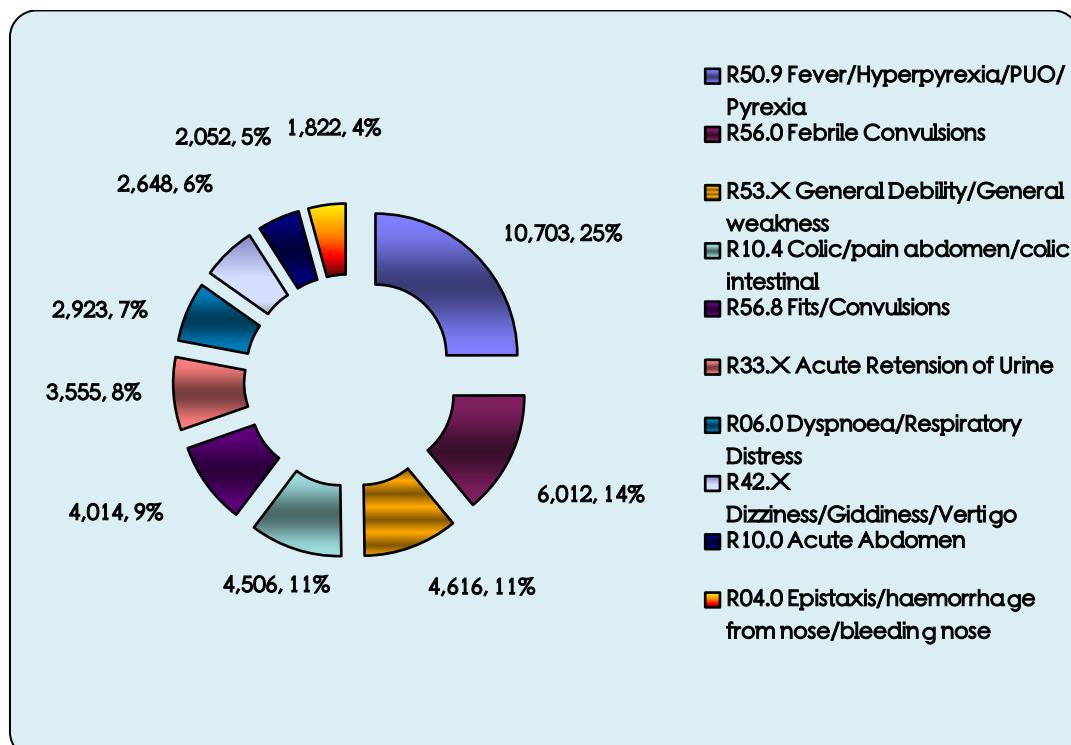

XVII. Congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)

Figure (22) Distribution of top 10 conditions of congenital malformations, deformations and chromosomal abnormalities by gender

XVIII. Symptoms, signs and abnormal clinical and laboratory findings (R00-R99)

Figure (23) Percent distribution of top 10 conditions of non-specific diagnosis

XIX. Injury, poisoning and certain other consequences of external causes [S00-T98]

Figure (24) Percent distribution of injury and poisoning

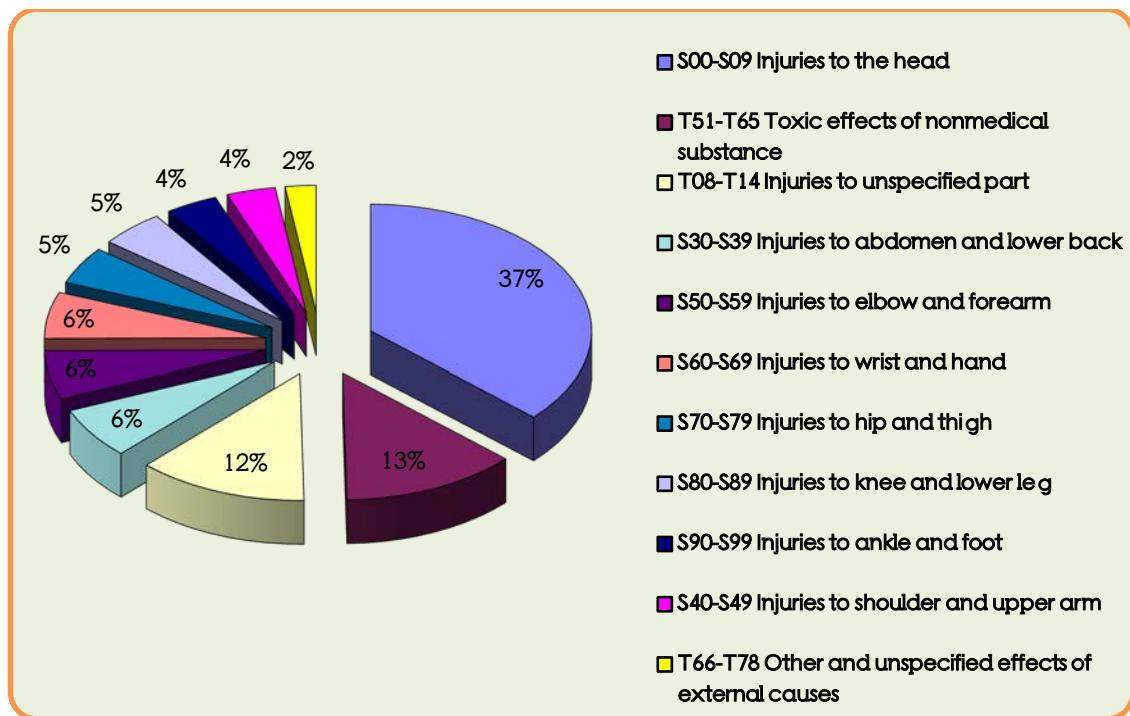

Figure (25) Gender distribution of top 10 conditions of injuries and poisoning

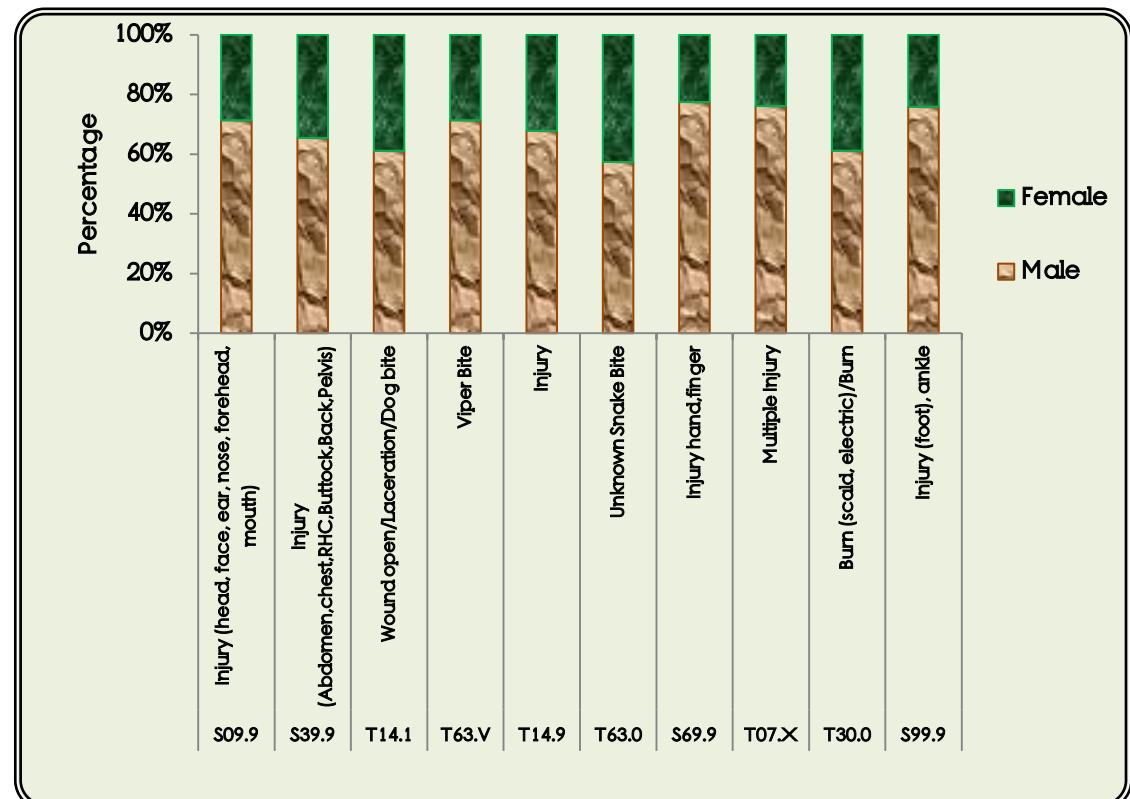

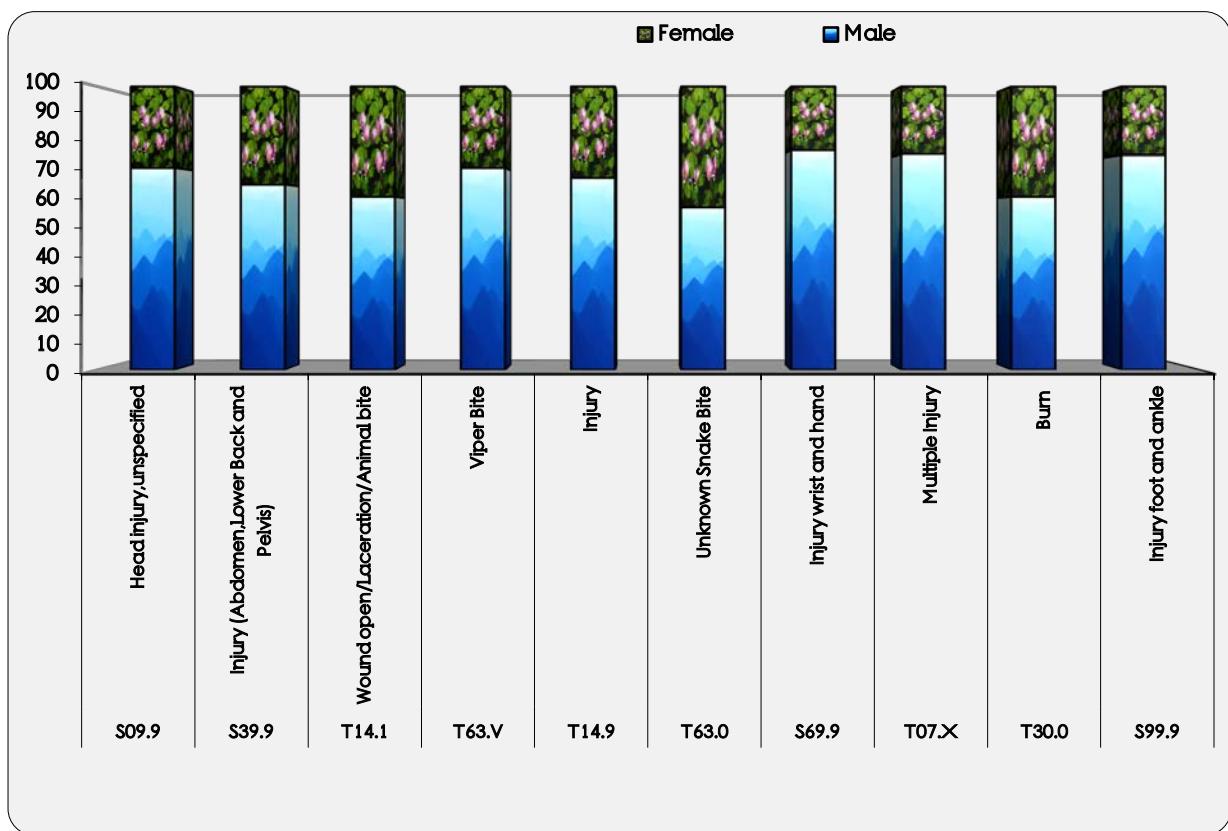

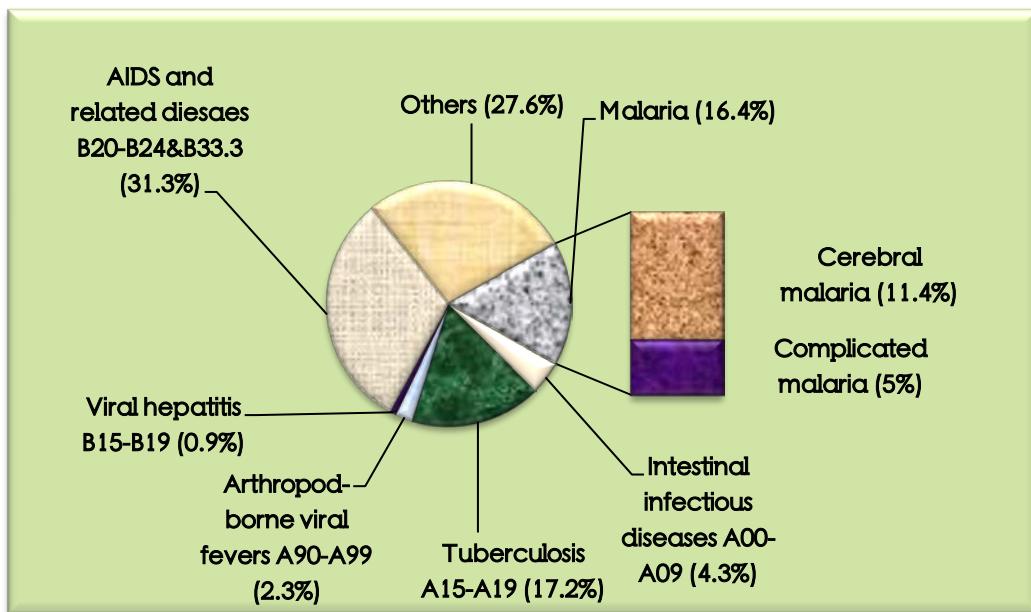

Figure (26) Gender distribution of top 10 conditions of injuries and poisoning

B. GRAPHICAL PRESENTATION OF MORTALITY FINDING (2010)

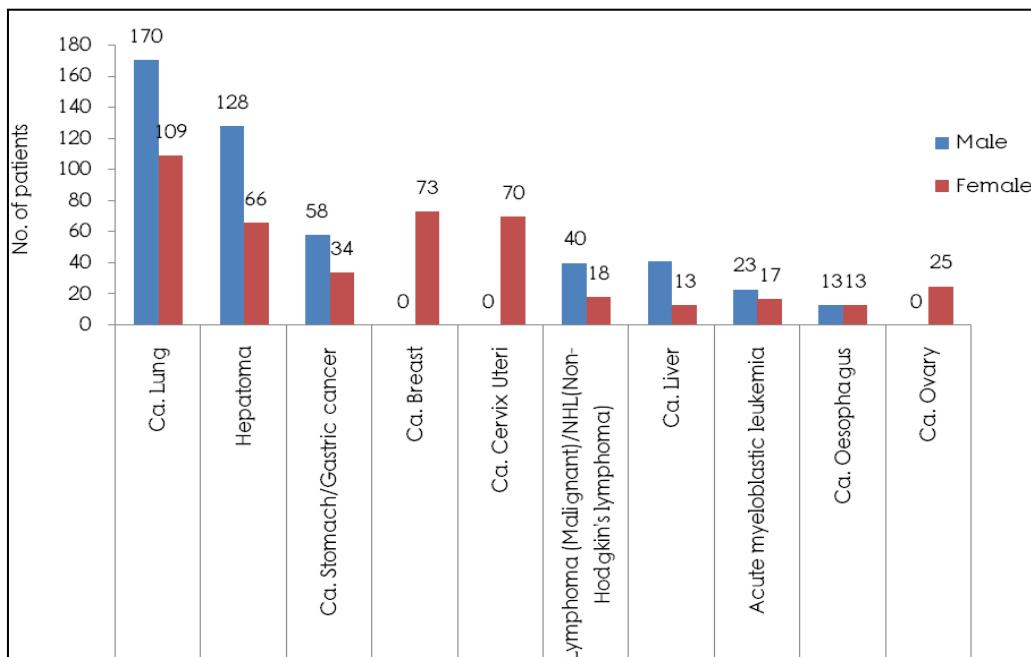

I. Certain infectious and parasitic diseases (A00-B99)

Figure (27) Causes of death due to the infectious and parasitic diseases

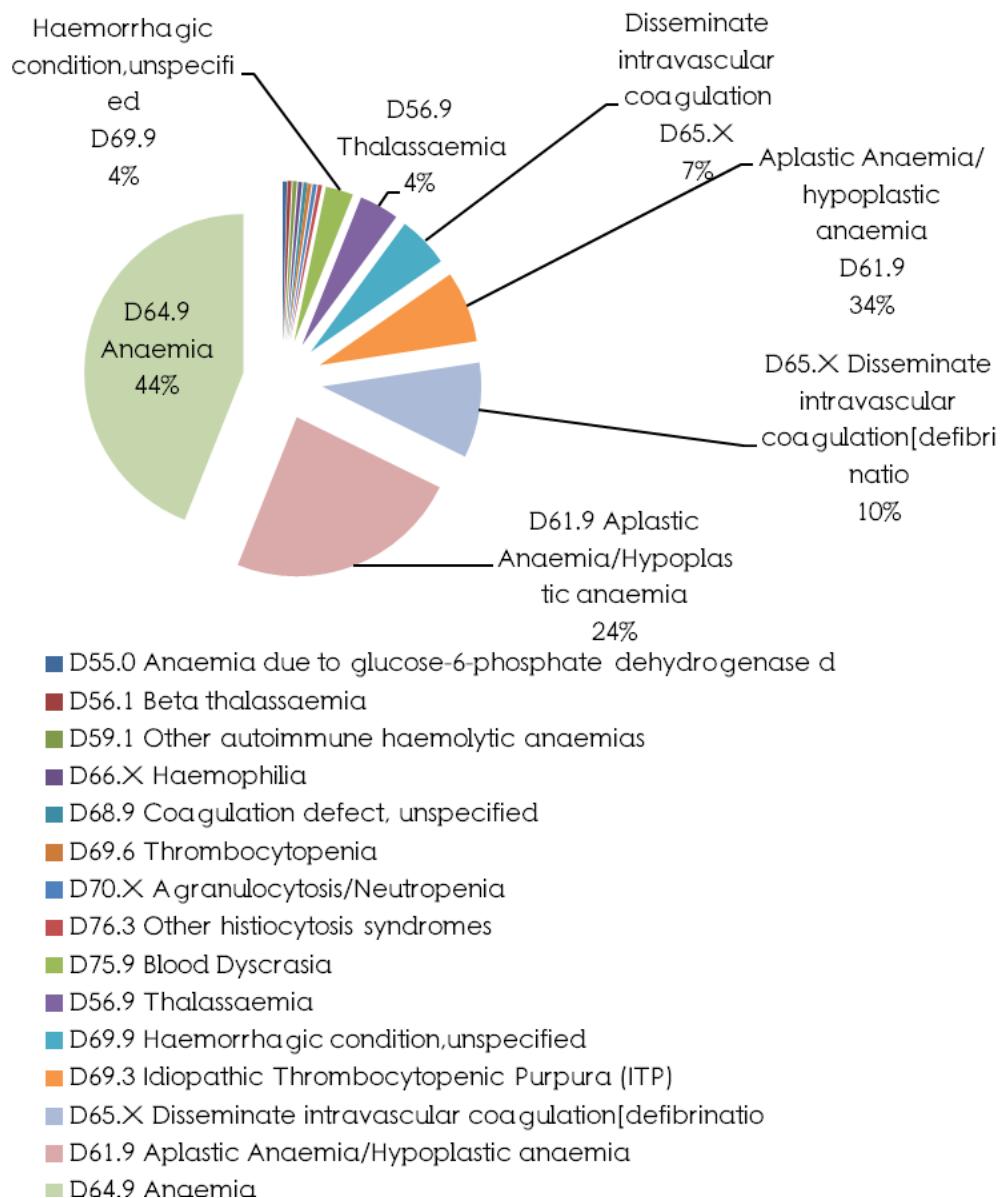

II. Neoplasms (C00-D48)

Figure (28) Top 10 causes of death due to cancer

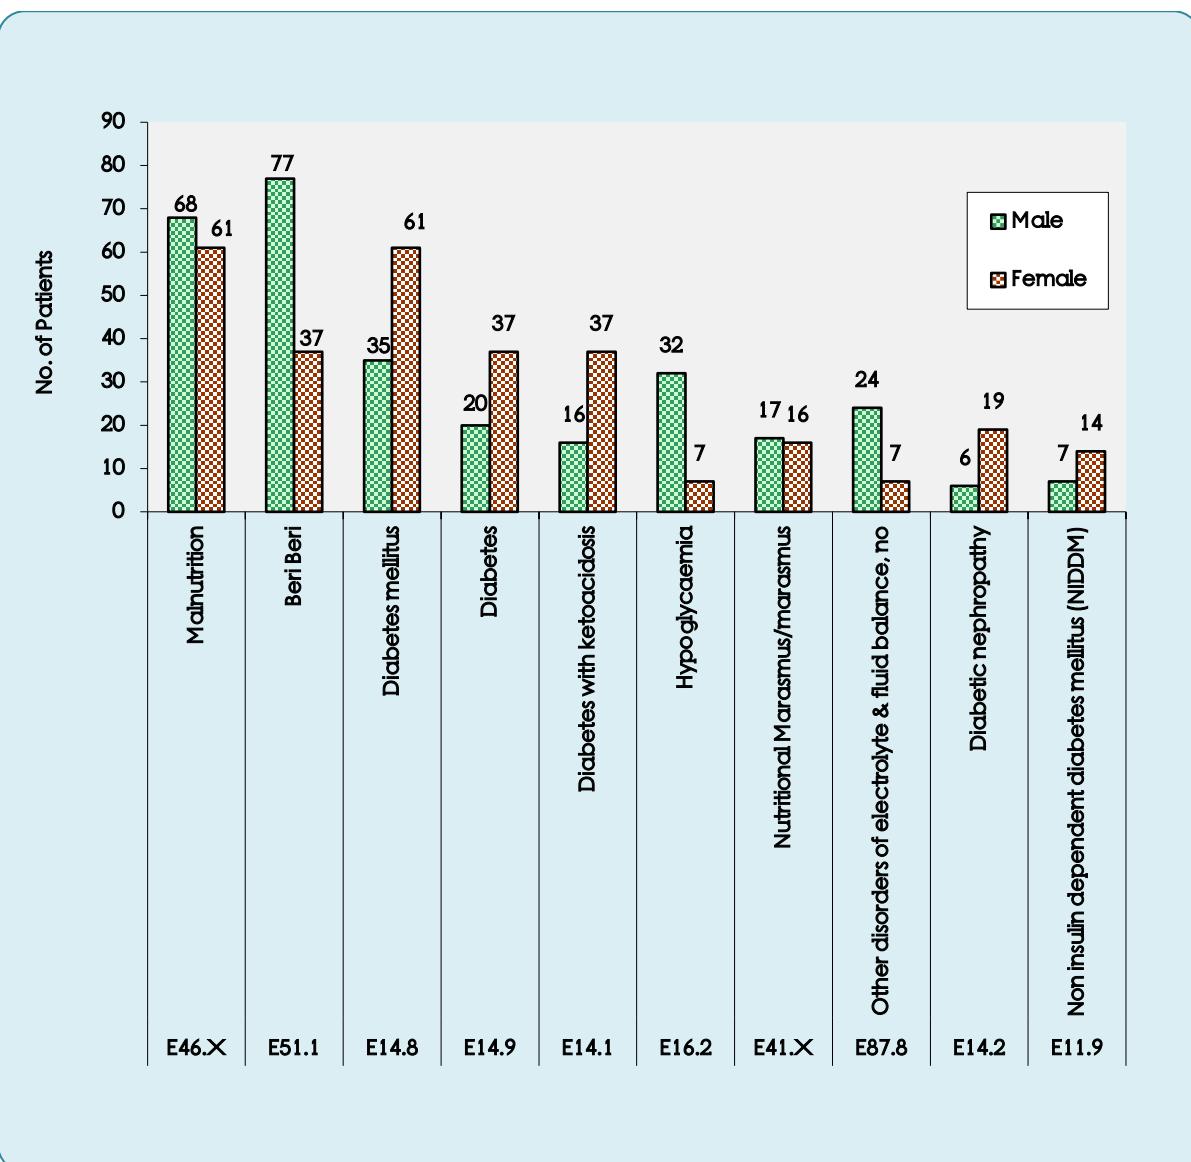

III. Diseases of the blood and blood-forming organs and disorders involving the immune mechanism (D50-D89)

Figure (29) Causes of death due to the infectious and parasitic diseases

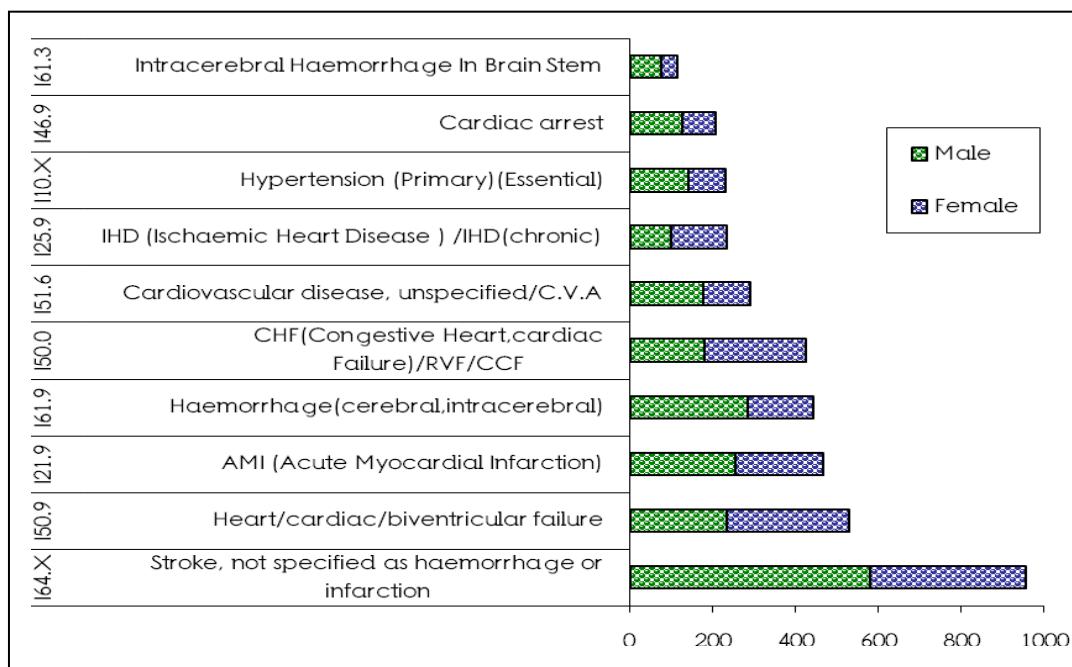

IV. Endocrine, nutritional and metabolic diseases (E00-E90)

Figure (30) Top 10 cause of death due to endocrine, nutritional and metabolic diseases

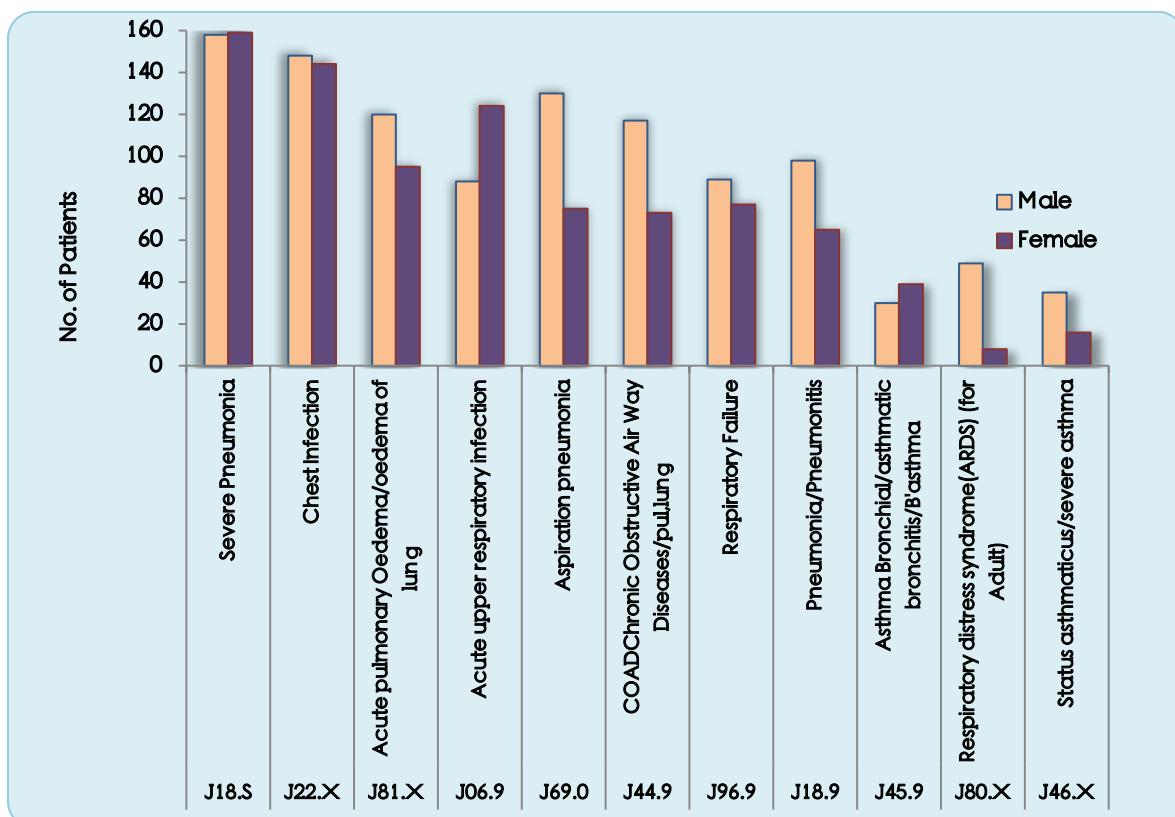

V. Diseases of the circulatory system (I00-I99)

Figure (31) Causes of death due to diseases of the circulatory system

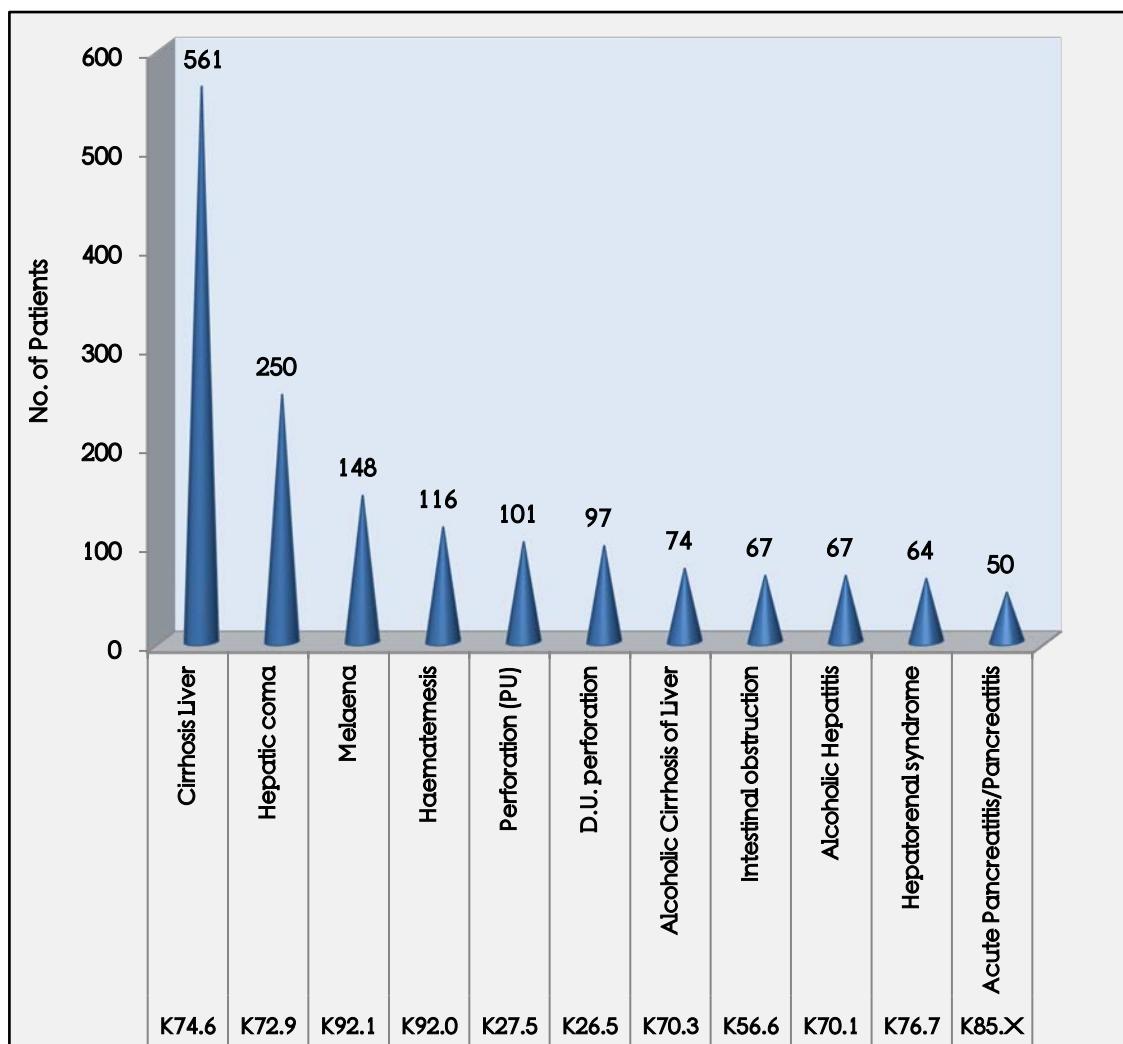

VI. Diseases of the respiratory system (J00-J99)

Figure (32) Causes of death due to diseases of the respiratory system

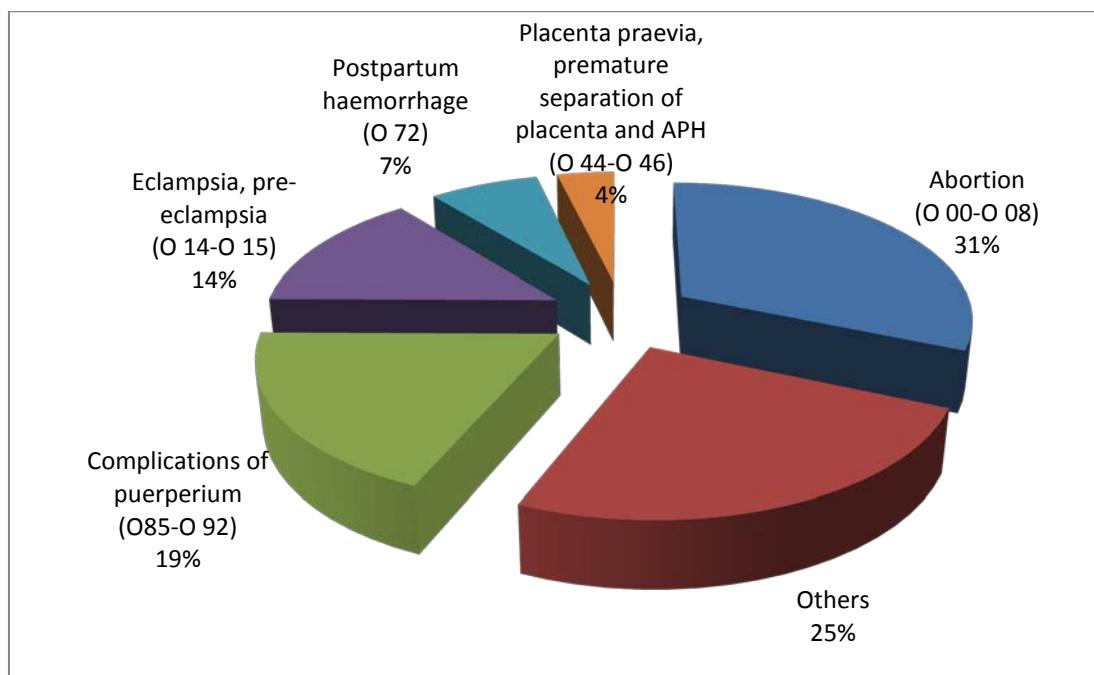

VII. Diseases of the digestive system (K00-K93)

Figure (33) Causes of death due to diseases of the digestive system

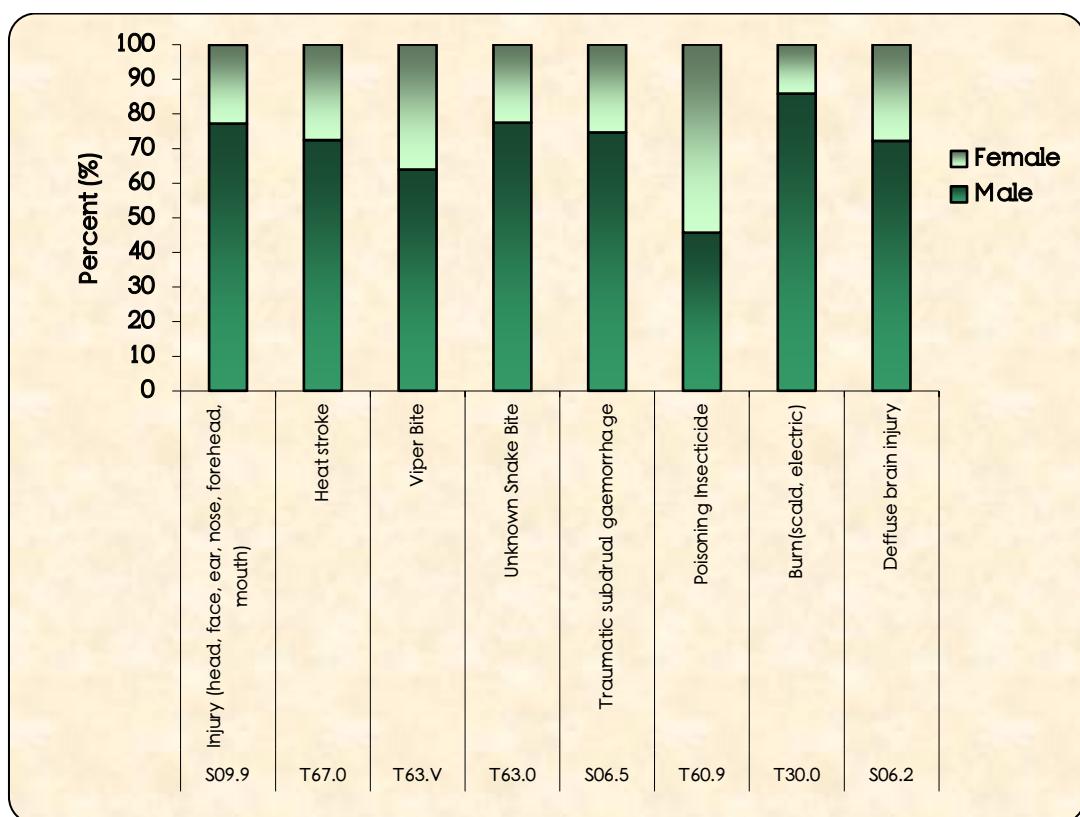

VIII. Pregnancy, childbirth and the puerperium (O00-O99)

II. Neoplasm(C00-C48)

Figure (31) Leading cause of mortality due to cancer

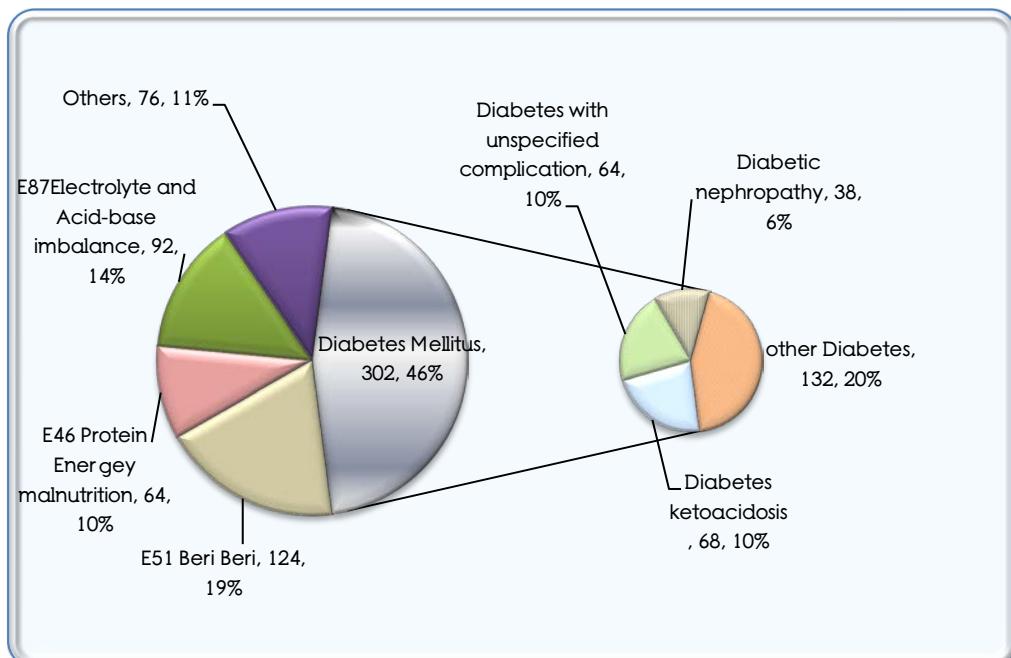

III. Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism (D50-D89)

Figure (32) Causes of death due to diseases of the blood and blood-forming organs

IV. Endocrine, Nutritional and Metabolic diseases (E00-E90)

Figure (33) Leading Causes of mortality due to endocrine, nutritional and metabolic diseases

V. Diseases of the Circulatory System (I00-I99)

Figure (34) Causes of Death due to diseases of the circulatory system

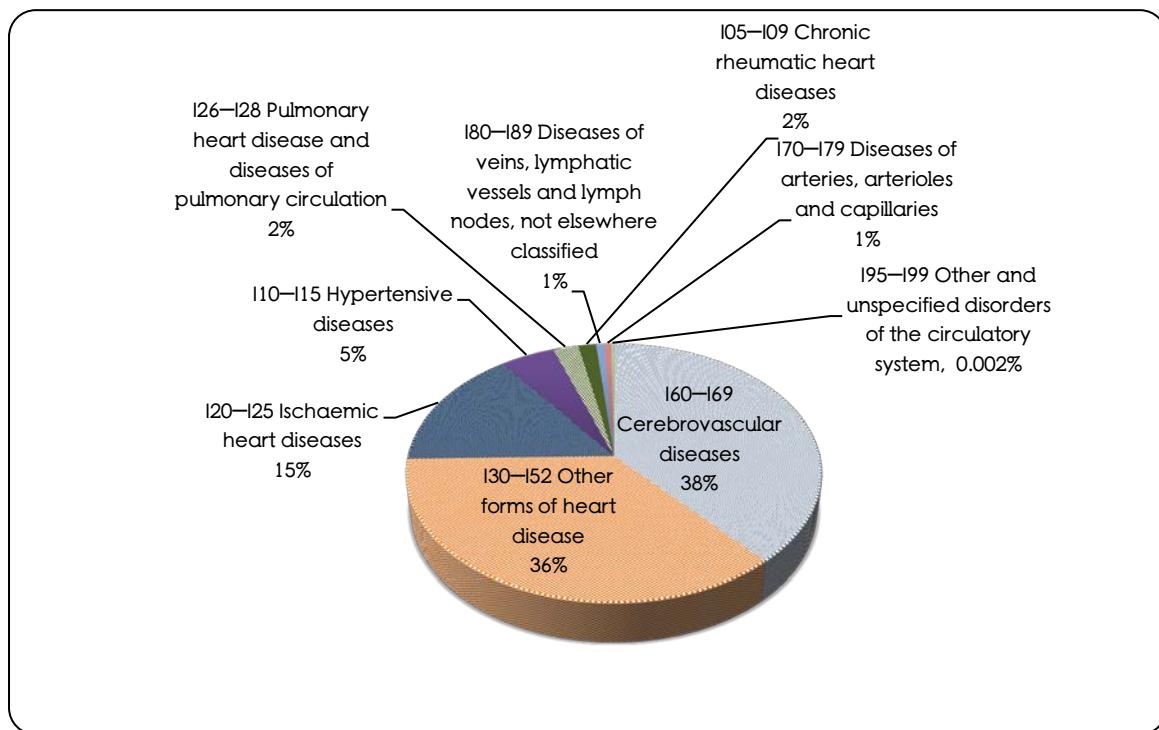

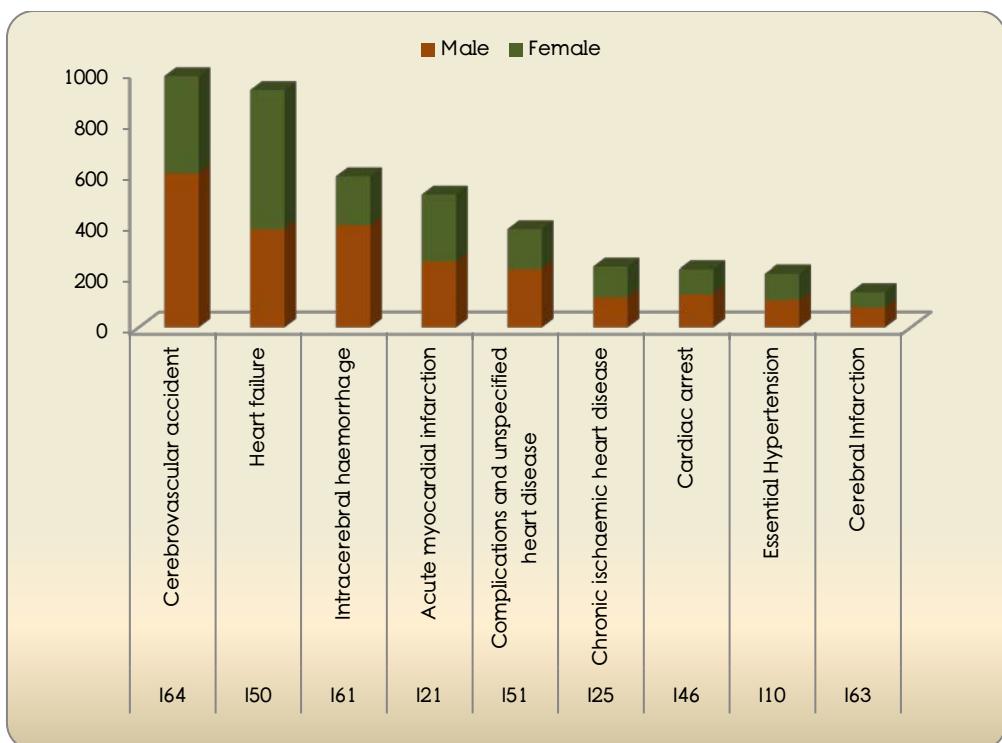

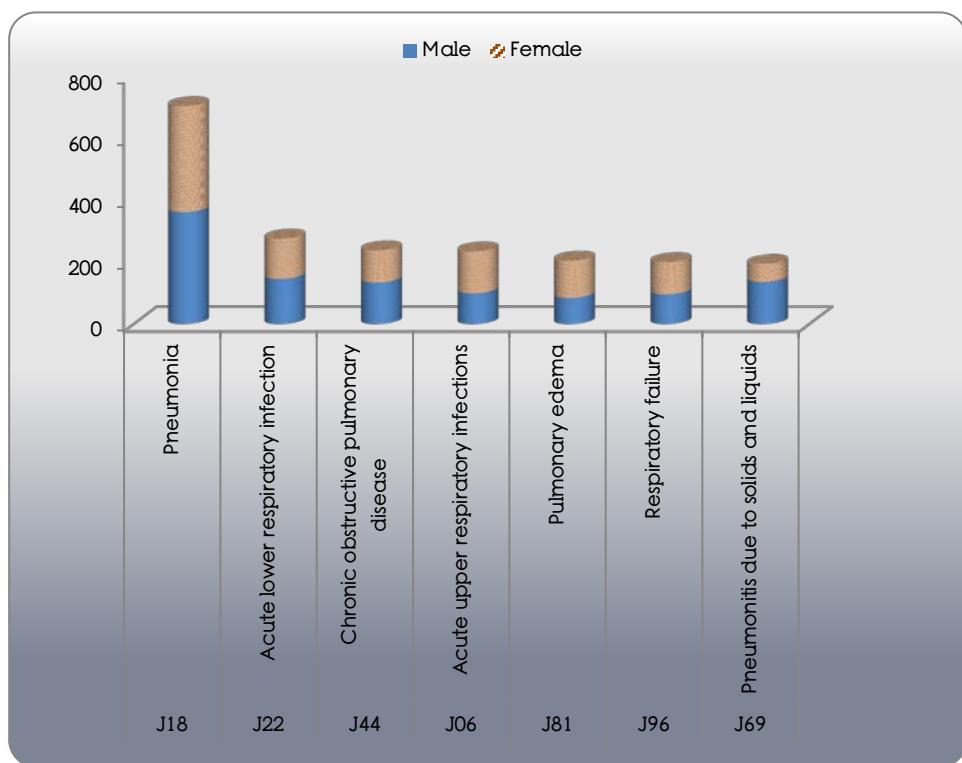

Figure (35) Leading causes of death due to diseases of the circulatory system

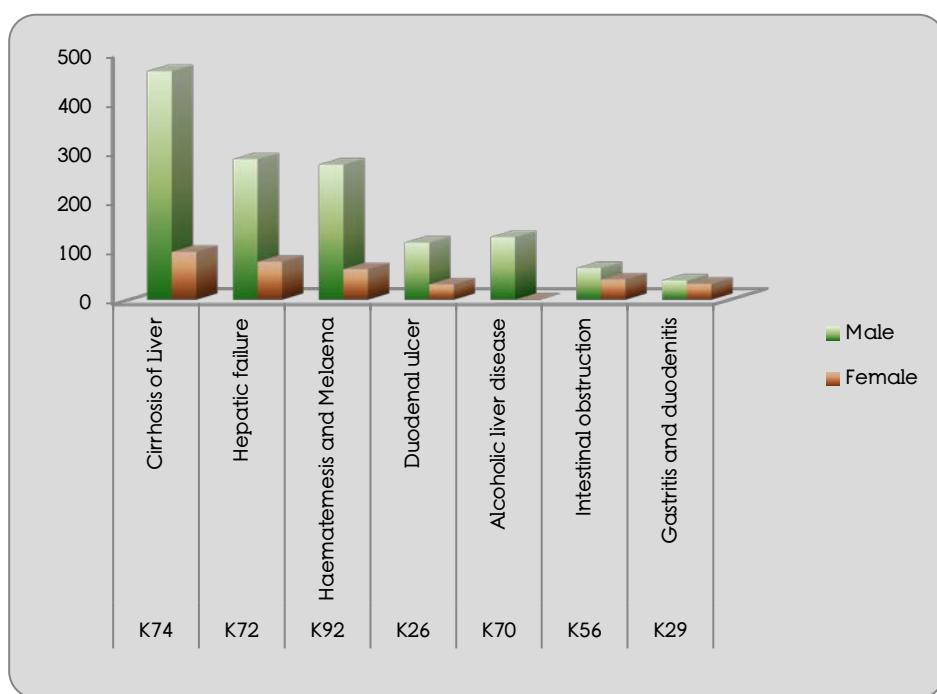

VI. Diseases of the Respiratory System (J00-J99)

Figure (36) Leading causes of death due to diseases of the respiratory system

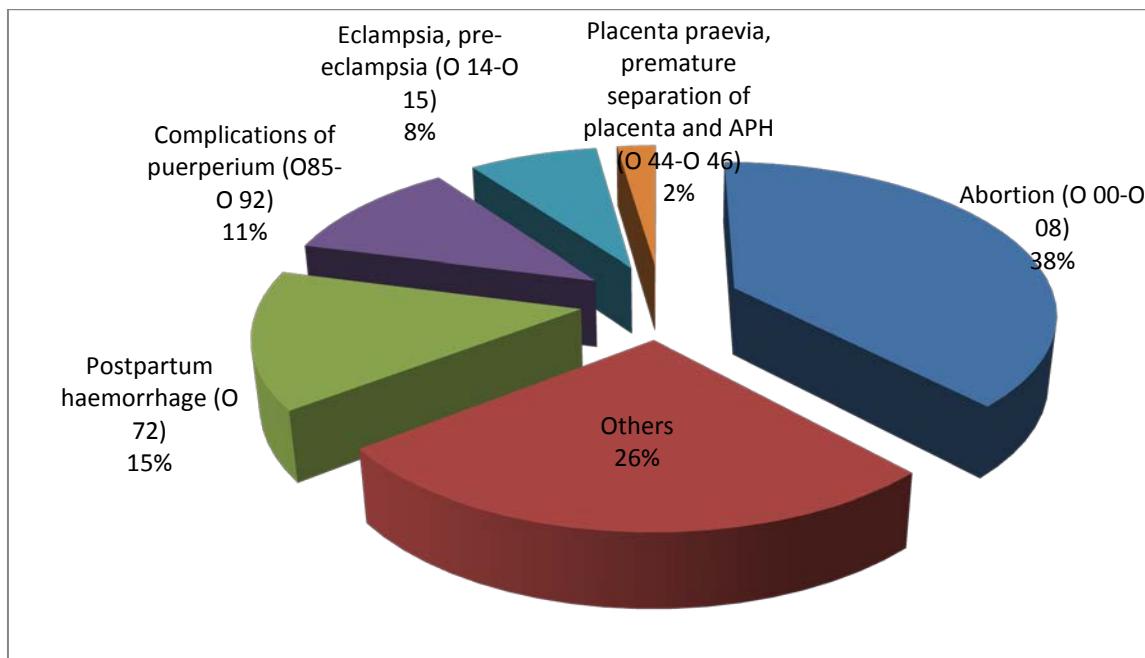

VII. Diseases of the Digestive System (K00-K93)

Figure (37) Leading causes of death due to diseases of the digestive system

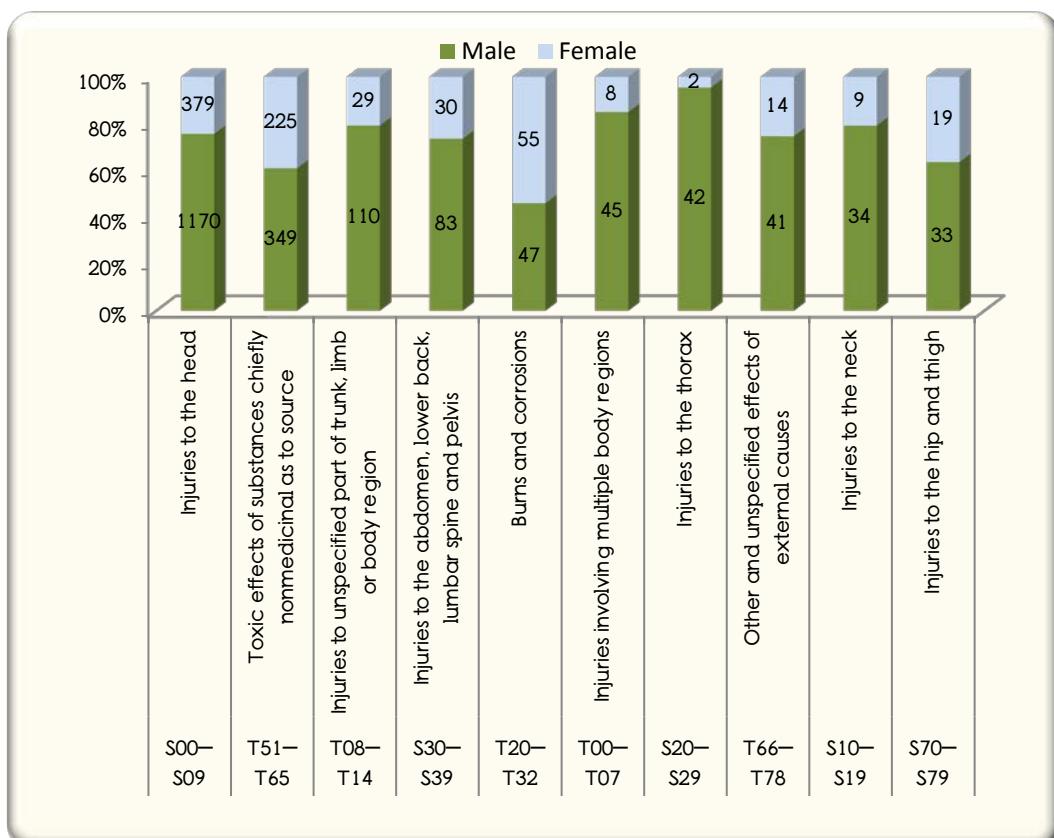

VIII. Pregnancy, Childbirth and the Puerperium (O00-O99)

Figure (38) Obstetric causes of death

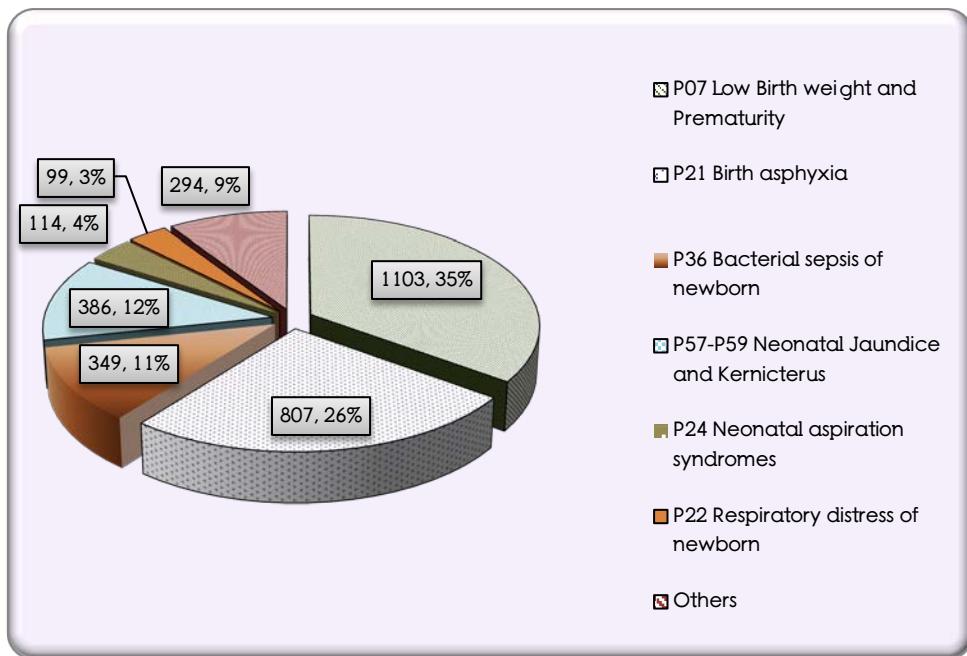

IX. Injury, Poisoning and Certain other consequences of external causes(S00-T98)

Figure (39) Leading causes of death due to injury and poisoning

X. Certain conditions originating in the perinatal period (P00–P96)

Figure (40) Causes of death in perinatal period

ANNEX 5

1. Average number of out-patients per day
- $$= \frac{\text{Total number of out-patient attendances}}{\text{Number of working days in year}}$$
2. Average number of In-patients per day
- $$= \frac{\text{Total number of patient days}}{365 (\text{Number of days in year})}$$
3. Average duration of stay (in days)
- $$= \frac{\text{Total number of patient days}}{\text{Number of discharges & deaths}}$$
4. Percentage of occupancy based on available beds
- $$= \frac{\text{Average number of in-patients per day} \times 100}{\text{Number of available beds}}$$
5. Percentage of occupancy based on sanctioned beds
- $$= \frac{\text{Average number of in-patients per day} \times 100}{\text{Number of sanctioned beds}}$$
6. Average turn-over of patients per bed per year
- $$= \frac{\text{Number of discharges & deaths}}{\text{Number of available beds}}$$
7. Average turn-over interval [in days]
- $$= \frac{[(\text{Available beds} \times 365) - \text{patient days}]}{\text{Number of discharges & deaths}}$$
8. Hospital Death Rate
- $$= \frac{\text{Number of deaths} \times 100}{\text{Number of discharges & deaths}}$$
